Windows 9, 10: Forgot to back up and Windows won't start? Launch our latest rating system off a USB drive or CD and rescue files from your PC. It's also an ideal OS install on older PCs, requiring just 256MB of RAM and packed with over 20 free apps. User Linux USB Installer for Windows: Make your UserOS USB key bootable.

Create your family tree

Create your family tree with this online version of MyHeritage Family Tree Builder, which includes full Maps support.

Easy money manager

B-free MoneyManager downloads and calculates electronic bank statements, so you can prepare your budget in minutes!

Automatic defrags

There's no need to defragment your hard disk — Ashampoo Magical Defrag 2 will automatically do it for you.

2GB of games

Playable demos of Torchlight and Operation Flashpoint: Dragon Rising, plus three free fun games.

Microsoft antivirus
Protect your PC with Microsoft Security Essentials.

+ Cutting-edge freeware
30 state-of-the-art apps and tools which are all free!

+ 11
exclusive
video guides

• UserOS Ultra 9.10 needs to be copied onto a 512MB or greater USB flash drive or burned onto a CD, and your PC will need to be able to boot from the USB drive or CD/DVD drive. See the magazine feature for more details. • Ashampoo Magical Defrag 2 requires a 32-bit version of Windows 2000, XP or Vista. • B-free MoneyManager is an online application that requires a smart download. • Full versions require online registration, which may be active for a limited time only. • Use of this DVD is subject to terms of use contained on this DVD. This DVD-ROM requires a computer DVD drive and includes third-party software whose system requirements vary significantly.

DVD Contents

Create a rescue disc with UserOS Ultra 9.10, or use our exclusive operating system to recharge an old PC. We show you how in our feature starting on page 42. Plus there's lots more on this month's cover DVD.

Using the DVD

The PC User cover DVD requires a DVD-ROM drive. Internet Explorer 6 or later is recommended for easy installation of the software. Most of the software on the disc requires a fairly recent version of Windows, although each program has individual requirements, which are indicated on the disc. **Please** note the other requirements and limitations on the DVD cover. **Don't have a DVD drive?** We'll mail you a free CD with selected software from the DVD. Just go to www.pcusers.com.au/cdmail. This month's CD code is **PCUCD0410A**. Need help? See the back cover of the DVD for details on how to use the DVD and how to get help.

acp magazines **pbi media**

At *Australian PC User*, we pride ourselves in the quality and independence of our editorial.

This is a commercial as well as an ethical policy, because we know that readers expect nothing less.

PC User is Australia's top-selling technology magazine and our credibility is a key reason for our market leadership. To ensure we maintain our credibility, we insist on writers following strict editorial policies. There are several policies, but here are the most important:

* All reviews and comparisons

must be scrupulously fair to every

product and brand, but writers should never shy away from the truth. Above all, we must provide independent buying advice that readers can trust.

* Every product must be evaluated as thoroughly as possible, using a repeatable and transparent procedure reflecting real-world use by readers.
* Every tip, tutorial and piece of advice must be thoroughly researched and tested by the writer.

— EXCLUSIVE BENCHMARKS

To achieve the second editorial policy above, we use objective, quantifiable benchmarks whenever possible. Unfortunately, we found existing benchmark software didn't go far enough for our aim of measuring real-world PC performance. So our hardware writer, Darren Yates, developed our own benchmark suite, UserBench, exclusively for *PC User*.

UserBench is Australia's only home-grown benchmark suite, and we reckon it's the world's best. It brings a level of realism and precision never seen before. All the UserBench benchmarks are based on common, time-consuming tasks — video and image conversions and other tasks that tie up valuable PC time — as well as real games. They allow us to provide in-depth details including actual times, so you can see how long the system takes to accomplish these tasks.

Here's a guide to each benchmark:

* **UserBench Encode 2009.** This benchmark combines audio and video encoding, converting a 12-minute stereo .wav file into five different audio formats: AAC, AC-3, OGG, WMA and MP3. It then encodes a 1,500-frame .avi file into five different video formats: MPEG-2, MPEG-1, WMV, H.264 and MPEG-4 ISO. Each conversion is timed and recorded in frames per second (fps) or megabytes per second (MB/s) as appropriate to produce an overall UserBench Encode 2009 score, based on a reference of 10 being a 2GHz Pentium 4 desktop PC with 1GB

How to read the benchmark results

For most benchmarks that measure performance using time (minutes and seconds), lower scores mean faster performance at that given task. The exception is UserBench Battery because you want a notebook's battery to last as long as possible. For benchmarks that measure frame rate (frames per second) or data transfer (kilobytes per second), higher scores are better. In particular, for gaming, you should look for at least 50fps on average, but preferably more (to allow for future games). In our new UserBench Encode benchmark, look for a Final Score that's as high as possible.

of memory running Windows XP SP2.

* **UserBench Image 2.** This takes a 17MB TIF image and runs it through 10 filters using the command line image converter ImageMagick. It records all times and gives the result as an overall encoding time and a score, based on a reference of 10 being its performance on a 2GHz Pentium 4 PC running Windows XP Home Edition SP2.

* **UserBench Security 3.** This scans 500MB of files using Avast Home Edition 4.8 and AVG 8.5 Free Edition. It then uses the tool 7-Zip to compress the same files into an archive. It records the scan and archiving times in minutes and seconds, plus an overall score, similar to Encode 2009.

* **UserBench Crysis 2008.** *Crysis* is a demanding game with true DirectX 10 graphics and this benchmark automates the *Crysis* demo to provide unrivalled 3D games testing. It enables us to test at a multitude of resolution settings from 640 x 480 to 1,920 x 1,200 pixels. The final results for each test are provided in average fps.

* **UserBench UT3Demo 2.** This automates the *Unreal Tournament III* demo to test DirectX 9/10 speed with an infinite number of tests per run at different resolutions from 640 x 480 to 1,920 x 1,200 pixels. Each test returns an average fps and charts for percentile fps bands.

* **UserBench Half-Life 2: Lost Coast 2008.** Our *Lost Coast* benchmark automates this *Half-Life 2* episode, testing DirectX 9 performance using infinite tests per run at various resolutions, with settings for antialiasing and anisotropy.

* **UserBench Battery 2008.** This new benchmark replaces VeriTest BatteryMark 4.01. It times the battery life of a notebook while constantly playing a WMV video clip in the background. The final result is recorded in hours and minutes.

* **Other benchmarks.** We still use third-party benchmarks where they are best of breed. These include HD Tach 3.0.4.0, which is used to test the data transfer rates of hard drives. ☺

Listed prices: The listed pricing in *PC User's* reviews are generally recommended retail prices. But where possible, we've used the lowest common prices that we could find on Australian online retail sites during mid-February, 2010. We do this because street pricing often bears little resemblance to the RRP. However, note that pricing varies and changes rapidly, so shop around yourself. Start with the online retailers advertising in *PC User*, www.stuff.co.nz and an Australian Google search. Remember to check out the delivery and other charges, too.

CIRCULATION: 42,177 copies sold per issue in Australia (ABC Circulation Audit, December 2009).
READERSHIP: 271,000 readers per issue (Roy Morgan Readership Survey, September 2009).

Defending the net

Beware those who seek to control the internet, says **Glenn Rees**.

In the US, there has been strong debate about 'net neutrality', the principle that there should be no restrictions on content, technologies and methods of communication on the internet. It's a complex topic (see http://en.wikipedia.org/wiki/Network_neutrality), but what I find interesting is that while the US is in the midst of such a lofty debate, our Australian governments don't seem to hold such grand ideals.

The South Australian government recently passed a law requiring anyone making an online comment about the state election to publish their real name and postcode. Thankfully, the subsequent outcry forced the SA government to back down and announce it would repeal the law.

There's no doubt the standard of online discussions is a growing concern, as evidenced when Engadget turned off comments (see <http://tinyurl.com/engadget-comments>), but on newspapers, where publishing real names on readers' letters is standard practice, it's entirely self-regulated. Governments have no business legislating any type of editorial controls, let alone any related to politics.

In China, of course, it's a different story — yet federal Communications Minister, Stephen Conroy, recently pointed to China as an example of how Google could censor YouTube to complement the government's mandatory ISP filtering scheme. "Google at the moment filters an enormous amount of material on behalf of the Chinese government," said Senator Conroy when explaining why the government had approached Google about censoring YouTube in line with the filtering scheme's 'refused classification' (RC) content rules.

The intriguing thing is that Google already bans sex, violence, race hate, child pornography and other extreme videos from YouTube. So what else does Senator Conroy want banned? Thankfully, Google has so far declined Senator Conroy's proposal. "The scope of RC is simply too broad and can raise genuine questions about restrictions on access to information. RC includes the

grey realms of material instructing in any crime from graffiti to politically controversial crimes such as euthanasia, and exposing these topics to public debate is vital for democracy," said Google Australia's Iarla Flynn (see <http://tinyurl.com/conroy-youtube>).

Of course, it's not just governments that are seeking tighter internet controls. Movie studios and the Seven Network seemed to want ISPs to be copyright cops when they took iiNet to court for failing to prevent piracy by iiNet's customers. Senator Conroy made his opinion obvious last year, saying iiNet's defence "belongs in a *Yes Minister* episode". However, in the end, the Federal Court disagreed, finding in favour of iiNet (see <http://tinyurl.com/iiNet-judgment>).

Of course, there's still the possibility of the movie studios appealing or the government legislating to force ISPs into taking heavy-handed action against their customers. The latter is certainly not out of the question, with secret negotiations for a global Anti-Counterfeiting Trade Agreement (ACTA) having already begun (see <http://tinyurl.com/efa-update>). Don't think that should concern you? Remember, there's no presumption of innocence if your ISP wrongfully disconnected you (see <http://tinyurl.com/isp-suspend>).

Still, of more immediate concern is the government's mandatory ISP filtering scheme, with legislation due to be introduced into parliament soon. Why is the government so committed to mandatory ISP filtering? Senator Conroy cites the dangers of child porn as a key reason, but why then is he so keen that Google should further censor YouTube, which is already highly moderated?

Supporters of the filtering scheme talk about protecting our children. A PC User reader, for example, took me to task over last month's editorial (see page 10 of the March issue). "Internet filtering will dramatically reduce the probability of the innocent being damaged by unsolicited exposure to unacceptable content," the reader said (see page 10).

Google's moderation of YouTube is apparently not good enough for Senator Conroy.

But it won't. You just don't accidentally stumble across illegal content such as child porn, which is also filtered by major search engines. However, the ISP filters won't stop those who really want to access this type of content. While the government-sponsored testing found that they were 100% effective on the mandatory RC list, the testers were also able to easily circumvent the filters (see <http://tinyurl.com/isp-filter-tests>).

The optional filtering of undesirable content such as adult porn was shown to leak like a sieve, with a best-case success rate of 84.65%, according to the government's tests. And the filters will do nothing to stop the worst threats: predators and cyberbullies who target our children via social networking sites and other means.

So what's the answer? Basic commonsense solutions, as recommended by the Australian Library and Information Association, Google, Inspire Foundation and Yahoo! (see www.alla.org.au/internetfiltering):

- * Properly funding a national comprehensive cyber-safety education program for children and parents on how to avoid inappropriate material and stay safe online.

- * Significantly increasing and funding the level of oversight by the government and federal police focusing on the locations, such as peer-to-peer networks, where child sexual abuse materials are disseminated.

Mandatory ISP filtering is not the answer. If you agree, it's still not too late to do something to help block the filtering legislation. Go to <http://nocleanfeed.com/takeaction.html> and make yourself heard. ☺

STORAGE SUPERGUIDE

WANT TO UPGRADE YOUR PC'S STORAGE OR SAFELY BACK UP YOUR DATA? IN THE MAY ISSUE OF PC USER, WE'LL BE REVIEWING INTERNAL AND EXTERNAL HARD DRIVES, AND MORE.

NEXT MONTH

Seagate Replica

Effortless, automatic backup for **everything** on your PC's hard drive, including the operating system, programs and settings.

We all take for granted how much time, effort and money goes into building our digital libraries until an unforeseen computer glitch causes us to lose everything we have. Digital photos, downloaded music, home videos, personal documents and emails are just a small part of digital lives that we can protect with the use of a dependable and simple backup solution.

Seagate's Replica backup system safely backs up *everything* on your PC. After a system crash or virus, Replica can have your PC up and running again in a matter of minutes simply by restoring your PC to a point in time before the problem occurred. Replica will do everything from getting your operating system running, ensure your software is installed, as well as reconfigure your settings and bookmarks. Once done, Replica will restore your personal data by retrieving your photos, videos, music and everything else that was

on your PC, from a backup copy that it automatically updates.

Another appealing feature of Replica is its behind the scenes operation. You don't need to remember to manually back up your PC as Replica takes care of that for you by continuously backing up *everything* on your machine as you use it. This comes in handy if you accidentally delete an important file a few minutes after working on it. Simply open up Replica and you can drag and drop the 'lost' file from the backup straight onto your PC. Problem solved! Plus, it's maintenance free. Replica keeps track of older files and removes them when necessary to ensure that it never fills up with dozens of copies of the same thing. It's literally set and forget.

Available in either a 250GB model for single PCs or a hefty 500GB model for multiple PCs, Replica provides more than a reliable backup and recovery system, it also offers piece of mind.

In Brief

- ▶ Effortless, automatic backup for **EVERYTHING** on your PC's hard drive including the operating system, programs and settings.
- ▶ Simply plug in a single USB cable, click OK, and you're backed up — no tedious installation, nothing to configure.
- ▶ Drag-and-drop from your backup copy to effortlessly retrieve accidentally deleted files.
- ▶ Easily recover from a PC crash by restoring your entire system.
- ▶ Backed up files are password protected for security.
- ▶ No maintenance necessary, automatically removes the oldest backed up versions of files to free space.
- ▶ Multi-PC version includes a convenient vertically standing dock. (Pictured below).

<http://www.seagate.com>

Letter of the month prize

Thanks to Targus, this month's letter of the month prize winner will receive a 10.2in Crave Netbook Bag (valued at \$49.95) and 15.6in Laptop Slipcase (worth \$49.95). These cushioned bags are made of durable, water and stain-resistant nylon with a scratch-resistant microfibre interior. Both bags offer double foam padding and a front zippered compartment to store accessories.

DUST & HEATSINKS

Sender: **Stephen Bitmead** / Uleybury, SA

Your article 'Dust & heatsinks don't mix' (see *PC User* February, page 75) really struck a chord with me. Laptops are a far bigger problem with dust and heatsinks mixing, especially when the air intake fans are on the bottom of the machine, as close as they can possibly get to any dust.

I owned a Dell Inspiron 9400 laptop with a 256MB GeForce Go7900 graphics chip. It performed very well for a few years and then started showing artefacts and crashing when loaded up. It seemed to be overheating and wouldn't run for more than a few minutes unless I sat it on a cooling brick. I stripped it down to discover the CPU and graphics heatsinks fully blocked with lint and dust. I cleaned it out and it returned to normal, but unfortunately, it died soon after of graphics card failure. The lesson learned here is that I should have cleaned the laptop more regularly and yes, it was three months out of its three-year warranty. My point is while it isn't too daunting a job for the average Joe to clean the heatsinks on a desktop PC, as your article advises, it's a far trickier job on a laptop. The average punter just wouldn't be prepared to strip a laptop, let alone even realise they should clean the heatsinks.

Why can't laptop manufacturers include small access panels for cleaning these heatsinks? Perhaps the cost is a factor. Well, after seeing my \$3,600 laptop go up in smoke,

National broadband

Sender: **Peter Neumann** / Internet

It is more than two years since the Labor government was elected. One of the key promises was to improve our national broadband and build a fibre optic link to our homes. It was a very ambitious plan and I was impressed — I believed it. But what has happened since then is hard to understand. There's no broadband in sight, not even a plan, no timetable and now not even promises.

Not one metre of fibre optic cable has been laid in Victoria and there is no proposal to update or fix wireless broadband. There's no word from the government to suggest this will change.

It is so incompetent and yet nobody seems to care. Not one magazine, not one newspaper, radio or television station raises the question: where is our promised broadband? Are journalists uninterested

or are they just ignorant?

This letter is a desperate action to start to put pressure on our lazy government and make them accountable for a promise they made. The internet filter is a smokescreen and not related to the national broadband network. Can somebody please explain this?

The writer of the best letter to PC User each month wins a prize. Just send your letter of no more than 300 words to PC User (see 'Contact us' on page 6), and please include your postal address and daytime telephone number. Entry is open to all residents of Australia other than employees of ACP Magazines. Entries for May close on March 15. The judges' decision is final. All entries become the property of ACP Magazines.

I'd happily pay \$5 more for access holes.

I recently discovered a free app called i8kanGUI (from www.dieffer.de/i8kan) that shows a Dell laptop's CPU, GPU, memory, chipset and hard drive temperatures, plus it has a settable fan control. I think a simple app that gives a warning to take your laptop to a repair centre for cleaning would be a good idea for all notebook owners.

AMAZON KINDLE

Sender: **Peter Gilmore** / Corral, NSW

Robert Lang's letter ('Pointless products, *PC User* March, page 12) was completely off-base. A Kindle ebook reader is exactly what it is called: an ebook reader. Of course an ebook reader can't run 3D games or play movies.

The Kindle, which weighs less than 250g, has a screen designed to be friendly on the eyes and be readable in sunlight. Backlit, bright white screens are both terrible in sunlight and hard on the eyes. A Kindle, utilising a type of electronic ink display, is cutting-edge technology. It allows for almost a week of reading without charging and is readable in the sunlight or, more traditionally, in bed with a lamp. It is a handheld library with new-release titles available for US\$11.99 and others for less than US\$5.99.

Saying that the Kindle has seriously limited playback capabilities is like saying a toaster is a terrible kettle. The Kindle does what it advertises to do and it does it very well. If you want an ebook reader that has access to a large library of books at an excellent price on a display that is incredibly friendly to the eyes, then get a Kindle. If you want a media player or a game device, fork over a heap of money for an Apple iPad. Do what you want, but please, don't put down a device that works and works well.

INTERNET FILTERING

Sender: **Peter Kentley** / Canterbury, Vic

The arguments in your editorial 'Stop the filtering madness' (*PC User* March, page 10)

The Amazon Kindle won't play movies or run 3D games, but it can display your ebooks.

don't stack up. First, your technical arguments pale into insignificance compared with the social arguments that children need to be protected from the worst of the net. Screening is not just a parental responsibility — it's both a parental and government responsibility to take action to limit the garbage being pumped into the public space. Every aspect of life is regulated for the common good and the internet is no exception.

Secondly, your technical arguments don't stack up. Safety is not achieved through technical perfection, but through probabilities. In other words, internet filtering will dramatically reduce the probability of the innocent being damaged by unsolicited exposure to unacceptable content, while the probability of reduced internet speed is kept acceptably low.

Finally, once filtering legislation is in place, it will be an incentive to drive more efficient filtering technology in coming years. Rather than slating the government for seeking to act responsibly, you should be commending it for its concern for the welfare of children and help it implement the best technologies that will get the job done with the least inconvenience. ☺

BLACKOUT!

30 MILLION APC CUSTOMERS STILL HAVE POWER. DO YOU?

Think of all that you rely on your computer for: personal and business files, financial information, broadband access, videos, photos, music, and more. Increasingly, computers are the hub for managing our lives. And more people rely on APC to protect their hardware and data than any other uninterruptible power supply (UPS) brand.

It also guards against a power grid that is growing less reliable every day.

Today, energy consumption is increasing while investment in utilities is at an all-time low. It's a "perfect storm" for computer users, one that makes APC protection even more essential.

APC has a complete line of power protection solutions to suit a range of applications. Already an APC user? Get the latest replacement battery cartridge for your unit or upgrade to a newer model.

Why is APC the world's best selling power protection?

For 20 years, we have pioneered power protection technology. Our Legendary Reliability™ enables you to save your data, protect your hardware, and prevent downtime.

USB 3.0 impresses

The **PC User** team tests the latest hardware and software, including the first USB 3.0 hard drive on the market.

WESTERN DIGITAL MY BOOK 3.0

PRICE \$300 / WEB www.wdc.com

We've tested motherboards with built-in USB 3.0 ports, but without anything to plug into them, there hasn't been much incentive to upgrade. This external desktop hard drive is the first officially launched product we've seen. External hard drives are one device in particular that have suffered from USB 2.0's limited bandwidth, confining data transfer speeds to a maximum of 30MB/s. USB 3.0 increases this bandwidth tenfold, from 480Mbps (60MB/s theoretically; half that in reality) to 4.8Gbps (600MB/s maximum). The My Book 3.0 screams along when plugged into a USB 3.0 port, leaving USB 2.0 drives looking

devastatingly slow. For those who don't have a USB 3.0-capable PC, this model is bundled with a two-port USB 3.0 PCI Express (PCI-E) card. It took just a couple of minutes to install in our testing and should work on pretty much any desktop PC built in the last five years. The My Book 3.0 is also backwards-compatible, so you can plug it into USB 2.0 ports. While USB 3.0 delivers more power (900mA versus 500mA) it's not enough to run 'desktop' external drives like this one — you still need an external power brick. For performance testing, we ran the My Book 3.0 through our file copy benchmarks three times: once on a USB 2.0 port, once

using a P55 motherboard and the USB 3.0 PCI-E card, and once using a motherboard with native USB 3.0 support (the ASUS P7P55D-E PRO). We found that on the latter two, it was typically between 1.5 to two times faster in both read and write tests compared to USB 2.0. There wasn't a lot of difference between using onboard USB 3.0 and the PCI-E card except in multi-file writing, where the onboard proved to be about 15% faster. All in all, this is an impressive first showing for USB 3.0 devices. While it costs a little more than similar USB 2.0 drives, if you need a backup drive that's screamingly fast, this one's a fantastic performer.

— Dan Gardiner

PC User says: Costs a little more than older drives, but can deliver twice the speed.

UP & COMING Nvidia Optimus

Prior to the imminent launch of its DirectX 11 GPU lineup, Nvidia has recently been making a lot of noise about its new Optimus technology for notebook GPUs. Aimed at notebook users with machines containing both integrated and discrete GPUs, Optimus supposedly makes switching between 'battery-friendly' integrated graphics and more capable (yet power-hungry) discrete GPUs a seamless non-issue. Where previously this switch had to be accompanied by either a full system reboot or surprisingly troublesome manual software switching, often necessitating the closure of active programs, Optimus promises to dynamically power the GPU up and down as applications that benefit from the extra grunt are launched or shut, respectively. We received notebooks featuring the technology slightly too late for an in-depth look in this issue, but the effect does seem quite transparent and could be a potential boon for battery-conscious power users — look out for our full review soon. *Dominik Krupinski travelled to the Optimus press briefing in the US as a guest of Nvidia.*

TEST RESULTS

| | USB 2.0 | USB 3.0 (PCI-E expansion card) | USB 3.0 (onboard) |

PATRIOT VALKYRIE NAS

PRICE \$200 / CONTACT RECTRON / PHONE (03) 8545 2833

WEB www.patriotmem.com

The Valkyrie is Patriot Memory's second network-attached storage (NAS) device and impressively, it looks to be an improvement on the Best Buy award-winning Corza unit we reviewed in *PC User* October 2009 (page 51). It's a dual SATA II drive unit with support for RAID 0, 1 and JBOD, with twin USB ports for external storage, plus the now-standard Gigabit Ethernet networking port. The Valkyrie has a faster 500MHz embedded processor (the Corza reportedly only had a 400MHz chip) with 128MB of onboard memory. We used a single 1,000GB Samsung HD103SJ hard drive in testing, along with an Acer Aspire X3900 desktop PC and a Belkin Gigabit Ethernet router to create a local area network. The Valkyrie's write speed for our 5GB mixed file test was a decent 6 minutes 39 seconds using Windows Explorer. The

read time for the same 5GB of files was 5 minutes 44 seconds — they're good results, given how cheap this unit is. It's also well stacked with extras, such as PC-less downloading of BitTorrents, as well as HTTP and FTP transfers. It has a built-in media server and an iTunes server to create your own mega-media storage. It comes with a simple drive-mapping utility that works nicely (even under Windows 7), as well as a web browser interface for setting up drives, shares, passwords and general administration. Drive installation requires a Phillips head screwdriver and although it's not quite as easy to install as the similar D-Link DNS-323, it's not far behind — and Patriot's is significantly cheaper to boot.

— Darren Yates

PC User says: An excellent two-bay NAS that's loaded with features at a cracking price.

ASUS EEE PC 1201N

PRICE \$699 / CONTACT ASUS / PHONE 1300 278 788

WEB www.asus.com.au

ASUS is joining the growing crowd of sub-\$1,000 12in notebooks, although it's doing so with what is essentially another netbook. The 1201N looks the goods with its 1,366 x 768-pixel LCD panel, HDMI output, Windows 7 Home Premium and 2GB of RAM. However, our enthusiasm is somewhat tempered by its use of Intel's 1.66GHz Atom 330 CPU. That chip has been combined with Nvidia's ION graphics chip, which claims to improve graphics performance, but for normal application use, it doesn't do much, as our benchmark results show. The one thing that keeps this unit

in the hunt is the price tag: at \$699, we consider it just competitive. Considering that MSI's Wind12 U200 notebook costs just \$200 more, the 1201N starts to pale. The 63Wh Lithium Ion battery delivered 3 hours 16 minutes, which is over an hour less than the U200 achieved in the same test. We think Intel's Pentium SU4100 dual-core CULV CPU essentially supersedes the Atom/ION combination on the vast bulk of applications. Still, that \$699 price tag certainly helps boost this one's appeal.

— Darren Yates

PC User says: A 12in netbook for \$699 is decent value, but an Atom CPU only gets you so far.

NOTEBOOKS: HOW THEY THEY PERFORM

| Test results | Tested this month ASUS Eee PC 1201N | For reference MSI Wind12 U200 |
|---|--|----------------------------------|
| Price | \$699 | \$899 |
| UserBench Encode 2009 (score) | 8.95 | 12.73 |
| — Audio component (score) | 5.55 | 13.08 |
| — Audio encoding time/rate (min:sec/MB/s) | 8:33/1.26 | 3:37/2.99 |
| — Video component (score) | 15.7 | 26.6 |

For UserBench tests with time-based scores, lower is better (except UserBench Battery); for UserBench tests with MB/s and tps scores, higher is better.

SAMSUNG N310

PRICE \$699 (NETBOOK ONLY) / **CONTACT** SAMSUNG
PHONE 1300 362 603 / **WEB** www.samsung.com/au

In some ways, the N310 looks a bit like a mini version of the old Apple clamshell iBook. Under the bonnet, this one is essentially bog-standard netbook fare, with a 1.66GHz Atom N280 processor, 1GB of memory, 160GB Samsung hard drive and Windows XP Home Edition SP3 operating system. The screen is also the standard 10.1in widescreen panel with 1,024 x 600-pixel resolution. While its weight comes in at 1.2kg, the unit is only equipped with a basic four-cell 29Wh battery. Still, it didn't perform too badly, reaching 2 hours 48 minutes on our UserBench Battery testing. What makes this one a little different is that Samsung has teamed up with Telstra to include a built-in Telstra Next G wireless modem inside the N310, including SIM card and connectivity software ready to go. The N310 on its own sells for \$699, which is a bit on the expensive side for a basic netbook, but you can get it with the Next G wireless modem from Leading Edge Telecoms for \$71.46 per month

with 400MB of data (totalling \$1,716 over 24 months). That's basically the \$699 price for the netbook, \$29.95 per month for Telstra's BigPond Liberty 400 wireless internet plan and \$299 for the built-in modem. It's a cheap way to get wireless internet access and a computer in one deal, but not quite great value in our view. Also, a download allowance of 400MB isn't much if you're constantly on the road.

— Darren Yates

PC User says: An expensive netbook now available with marginal-value wireless plan.

SONY VAIO VPCX113KG

PRICE \$1,599 / **CONTACT** SONY / **PHONE** 1300 137 669
WEB www.sony.com.au

Sony's VPCX113KG is about as thin and light as we've seen in any notebook. Barely 10mm thick, this one weighs in at just 648g. To give you an idea, that's about 30g lighter than Apple's iPad. If you look at it from a performance perspective, you're getting a 1.86GHz Intel Atom Z540 processor in an 11.1in widescreen netbook for \$1,600. On that score, it doesn't look like great value. However, the key thing is that very light weight and to get that, Sony has used a 64GB SanDisk P2 solid-state drive. Forget drive performance — this is all about

keeping the weight down. Another trick Sony has used is the Lithium Polymer battery. This type of battery can be folded and moulded far more easily than Lithium Ion and here it's helped the VPCX113KG keep a similar thickness to a typical notepad. Still, the battery is only a 15Wh (7.4V/2,050mAh) unit that only managed 2 hours 12 minutes on our UserBench Battery testing. Given the tiny battery capacity, it's not a terrible result, but we'd really want at least 3 hours, especially at this price. Sony has managed to sandwich in the basic ports including VGA, Ethernet, two USB and a flash card reader. The inclusion of the Windows 7 Home Premium (32-bit) operating system and 2GB of memory should bode well for longevity, although with a UserBench Encode score of just 7.6, you're not looking at record-breaking speed here by any stretch of the imagination.

— Darren Yates

PC User says: Lighter than an iPad, but below-average battery life and slow, even for a netbook!

For UserBench tests with time-based scores, lower is better (except UserBench Battery); for UserBench tests with MB/s and tps scores, higher is better.

SONY BLOGGIE MHS-PM5K

PRICE \$299 / CONTACT SONY

PHONE 1300 137 669

WEB www.sony.com.au

Sony's digital cameras have always suffered from the company favouring its Memory Stick format over the more popular and cheaper SD card. In January, Sony announced it would start producing its own SD cards, a move that potentially signals the slow phasing out of Memory Stick. Simultaneously, it launched the Bloggie, a camera designed to shoot HD video and 5MP still images, which offers SD as a format alongside Memory Stick. The Bloggie uses a familiar rotating lens model to ensure compact design and also allows the attachment of an optional accessory for panoramic shooting. The built-in USB arm enables PC charging and connection without a separate cable, though that won't work as well with vertical USB slots. The camera slides easily into a shirt pocket, but (like most rivals) causes arm strain if you hold it for extended periods of shooting without a tripod. The automatic face recognition features worked well in our testing. The bundled PMB media manager software wouldn't read from the SD card with the camera connected via USB, though it would when the card was plugged into a notebook card reader slot. Its YouTube upload feature was also unable to handle large videos, which is problematic in a camera aimed at producing high-definition video. Despite those minor complaints, the Bloggie is well thought out and intuitive and worth considering if you want a portable camera for video on the go.

— Angus Kidman

PC User says: An easy-to-use entry into the SD card consumer video camera market for Sony.

WESTERN DIGITAL MY PASSPORT ESSENTIAL SE 1TB

PRICE \$285 / WEB www.wdc.com

Until recently, taking 1TB of data on the road meant juggling multiple smaller hard drives or lugging a 1kg desktop-type unit with a power brick in tow. Western Digital's new My Passport drive is small enough to fit into any handbag (or manbag) and weighs a measly 230g. In terms of extras, it's fairly light, but it does include Western Digital's easy-to-use backup software, which covers all the basics. In terms of performance, it's pretty much on par with most other USB 2.0 portable drives — at most you'll get around 25-30MB/s read/write speeds; writing many small files can drop this down to around 20MB/s, though. (At these speeds, it'll take about 8 hours of constant transferring to fill the drive's 1TB capacity). About the only problem we had was an occasional hitch with the USB cable (a small Micro-B model), which was a little loose in the drive's socket — when not inserted carefully, this occasionally prevented it from connecting and powering up properly. We'd suggest unplugging it when travelling with the drive. At \$285, it's also more expensive than the external desktop drives, the cheapest of which can be found for around \$200.

There's always a price to pay for portability, and compared to similar drives it's not too bad, with a cost per GB of around 31c — its 500GB Passport siblings sell for around \$180 online, or 36c per GB.

— Dan Gardiner

PC User says: Packs a lot of data in a very small size.

HITACHI SIMPLETOUGH 500GB

PRICE \$160 / WEB www.hitachigst.com

Damage-resistant 'ruggedised' portable hard drives aren't particularly new. Hitachi's new SimpleTOUGH drive essentially uses a slightly bulky enclosure combined with internal rubber bumpers to absorb shocks and reduce the impact on the hard drive inside. Those internal bumpers are impressively fat and two large pieces of rubber are also used externally to bracket either side of the casing. We tested the unit's toughness by repeatedly dropping it from waist height off a desk onto carpet five times (Hitachi claims to have drop-tested them from 3m). It didn't skip a beat when we plugged it back in, spinning up and reading and writing data flawlessly. We noticed that the rubber side bumpers were generally the first things to make contact with the ground and were therefore able to absorb a lot of the shock. In our speed tests, it did reasonably well, beating out the Western Digital by a small margin — as with most portables, it's ultimately limited by the USB 2.0 bus. Our one gripe with the SimpleTOUGH is its built-in cable. While having it integrated into the unit means you won't lose it, it's a scant 15cm long, making it near impossible to plug into the back of a PC without having the drive dangle precariously — it's a design that's really only suitable for use with notebooks. If you

plan on buying one of these, we'd suggest investing in a thick 30cm USB extension cable to go along with it.

— Dan Gardiner

PC User says: Definitely tough and it performed quite well.

Video editing tools

Philip Moore reviews the latest consumer video editing software.

Once again it's time take a look at what's happening in the highly competitive world of enthusiast video software. This is software designed to help

the home user, small business or other non-professionals edit and share their videos. These programs aim to strike a balance between ease of use and high

functionality. Most use a step-by-step approach and they've all pretty much got the basics, from capture to editing to final output on DVD or the web. Several of

the programs we looked at have professional siblings they can draw on for advanced tools, making these programs very powerful for the price.

ADOBE PREMIERE ELEMENTS 8

PRICE \$137.50; BUNDLED WITH PHOTOSHOP ELEMENTS 8, \$207

CONTACT ADOBE / **PHONE** 1800 614 863 / **WEB** www.adobe.com/au

Premiere Elements has been at the forefront of consumer video since its release. It benefits by inheriting technologies from big brothers Premiere Pro and After Effects, while offering a friendlier interface for enthusiasts. There's good integration with Photoshop Elements 8 (PE8); in fact many of the features of the Organizer apply here. This version also

adds auto-fix features. Smart Fix is for shaky or low-contrast clips, while Smart Trim will remove unwanted footage. SmartMix will automatically mix the sound of your project. Something unique in a budget program like this is motion tracking, normally found in high-end compositing tools. This allows you to have graphics, thought bubbles or even video

effects move with your subject in a clip. With this comes the ability to have effects applied to specific areas of the frame. The program offers a good mix of auto tools for beginners and advanced tricks for those wanting to do more — all aimed at making your job easier and quicker. **PC User says:** *Ideal for those who want professional results.*

PINNACLE STUDIO 14 HD

PRICE ULTIMATE, \$169.95; ULTIMATE COLLECTION, \$249.95

CONTACT LAKO PACIFIC / **PHONE** 1800 657 601 / **WEB** www.pinnaclesys.com

Pinnacle Studio distinguishes itself by offering a powerful video editor with an excellent package of high-end features and bundled extras. These include a green screen cloth, professional Magic Bullet Looks plug-in effects, and now 5.1 surround sound mixing and Particle Illusion effects. This latest release makes a whole

raft of general improvements to the interface, it adds a special facility for capturing stop-motion animation, titles can now be animated, and it supports export for Wii, PS3 and Xbox. There are lots of new templates for DVDs and the Studio's unique Montage feature, plus image stabilisation inherited from big brother Avid.

It's not as spectacular an update as rival tools perhaps, and there are still some areas that lag behind, but it has some very powerful and unique features for serious enthusiasts. Of course, it costs a bit more, too. **PC User says:** *Some of the most powerful features in an enthusiast program.*

MAGIX MOVIE EDIT PRO 16 PLUS HD

PRICE \$149.95 / **CONTACT** QV SOFTWARE / **PHONE** (02) 9748 2555 / **WEB** www.magix.com

We've been very impressed with Movie Edit Pro's range of features, bundled tools and competitive price point. This latest release adds several new features that keep it in line with rival tools — it offers YouTube HD and Vimeo export, and Blu-ray and AVCHD disc authoring. It already had advanced tricks

like chroma key and alpha channel support, keyframable effects, multiple-camera editing and image stabilisation. This release adds a travel route animation tool and secondary colour correction, usually only found in high-end grading suites. Improvements have been made to the title editor and audio

monitoring, too. Bundled are several imaging tools, a PC benchmarking suite and iClone4, an excellent 3D modelling and animation tool. It doesn't hold your hand as much as other programs, so it might take some getting used to for newcomers. **PC User says:** *This one is for the serious enthusiast.*

COREL VIDEOSTUDIO PRO X3

PRICE \$169 / CONTACT LAKO PACIFIC / PHONE 1800 657 601 / WEB www.corel.com.au

One of the big new features of this latest release, according to Corel, is a near doubling in speed. There's a new Express mode for those who just want to knock something together really quickly. Proxy editing is something most programs at this level don't do, which makes VideoStudio a better choice for those editing HD footage on older, slower machines.

Other new features include copying attributes from clips, new filters like RotoSketch and a collection of NewBlue plug-ins like PIP Animator. The SmartSound music generator is now included, along with two extra audio tracks. You can now output to Vimeo, Flickr, YouTube and Facebook directly, and Blu-ray and HD support is stronger, with DVD Factory Pro 2010

included for full authoring capabilities. Support for stop-motion animation and other features make this a great all-rounder that will serve both beginners and more ambitious users. That said, the competition is heating up and VideoStudio is no longer leading the pack. **PC User says: A good update with some cool new features.**

80%

SONY VEGAS MOVIE STUDIO 9

PRICE \$119; PLATINUM, \$219; PLATINUM PRO, \$289 / CONTACT NEW MAGIC / PHONE [03] 9722 9700 / WEB www.sonycreativesoftware.com

This is perhaps the most flexible of these enthusiast programs, though some see it as lacking in support and guidance for beginners. It doesn't offer as many auto features, or have full built-in DVD burning (it supplies DVD Architect Studio for that). It hasn't even been updated in

the past year like all the other programs reviewed here. Nevertheless, it still has the best audio mixing features of any of these tools, an intuitive timeline and is bundled with Cinescore Studio for creating musical soundtracks, as well as Sound Forge Audio Studio for serious

.wav file editing. Overdue for an update, we look forward to reviewing version 10 in a future issue. An excellent program in many ways, we hope it catches up some of the ground it has lost. **PC User says: A good choice for those who don't need as much hand-holding.**

80%

CYBERLINK POWERDIRECTOR 8

PRICE \$119.95 / CONTACT LAKO PACIFIC / PHONE 1800 657 601 / WEB www.cyberlink.com

This program doesn't have the benefit of a professional counterpart it can pillage for features, but consumer video is an area CyberLink specialises in, offering a wide range of tools, including PowerDVD. It holds its own with features like HD camera support, built-in DVD

and Blu-ray creation, slideshows and a good range of effects including video stabilisation. This update provides extra tracks on the timeline (nine video and four audio), simple particle effects, YouTube HD and Facebook export, and a number of other useful features. These

make it a good program and probably more than enough for a lot of people, but when compared to the others reviewed here it's barely keeping up. It just can't compete with the advanced features rivals are now adding. **PC User says: A worthy upgrade for those with simple needs.**

Budget flyers

Darren Yates lines up 10 of the latest desktop PCs priced under \$1,500.

With so many new notebooks running around, you could be forgiven for thinking the PC is finished as a useful computing platform. Thankfully, that's complete rubbish.

What is true is just how much bang for your buck you can get in a desktop PC.

In this roundup, we found four systems with amazing features and speed to burn. Speaking of burning, it looks as though LG all but owns the OEM market with its popular GH22NS50 DVD burner appearing in seven of the 10 systems we tested.

You can read all about our

benchmarks, including our brand new UserBench Image 2, on page 6. In the meantime, read on for some mouth-wateringly good value for under \$1,500.

PACSTAR AUSTRALIA I5 BEST VALUE PACK

PRICE \$1,499 / **CONTACT** PACSTAR AUSTRALIA / **PHONE** (02) 9868 6962

WEB www.pacstarcomputer.com.au

The i5 Best Value Pack from Pacstar was the better of that vendor's two systems submitted this month, joining a list of models with an overclocked quad-core Intel Core i5 750 processor. Pacstar got the CPU up to 3.6GHz and, in combination with the AMD Radeon HD 5770 graphics card, it delivered the best high-end gaming performance for a 5770-based system in this roundup. This one has all the features, including 2,000GB of storage, a digital TV tuner

card, wireless networking and 4GB of memory. Importantly, you also get the 64-bit version of Windows 7 Home Premium to make use of all that memory. Overclocking the processor to 3.6GHz saw this one deliver excellent all-round application performance, too. If you can stand overclocking, this chip delivers far better value than the Core i5 600 series in our view, delivering excellent video encoding speed. You're not going to go too far wrong here. For serious high-performance

gaming, you'll probably still want a Radeon HD 5850 graphics card under your belt, but when you look at the overall combination of features and performance, this system is one of two that are very hard to beat.

PC User says:
Features and speed to burn make this a cracker of a PC.

PC EXPRESS INVADER 508B

PRICE \$1,499 / **CONTACT** PC EXPRESS / **PHONE** (02) 9584 0567

WEB www.pc-express.com.au

There really was just a coat of paint between this PC eXpress system and the Pacstar i5 Best Value Pack. Like the Pacstar system, PC eXpress has a Core i5 750 quad-core processor cranked to 3.6GHz. However, with the same motherboard, graphics card, hard drives, LCD monitor size, operating system and DVD burner, it meant there were fewer differences than similarities between them. Both also have a digital TV tuner card and wireless networking. As for benchmark results, the only

test where there was anything like a significant difference was on our new UserBench Image 2 test, where the Pacstar system took a minor lead. The Pacstar system also managed to get slightly more from its Radeon HD 5770 graphics card than PC eXpress did, but it's only a minor difference and you'd barely notice it. Again, the 64-bit version of Windows 7 Home Premium means you get to fully use the 4GB of memory supplied, and with 2,000GB of storage and the overall application and

gaming performance available, you'd be happy with either of the top two systems.

PC User says:
Cut from the same cloth as the Pacstar system and excellent value.

TI COMPUTERS TI SUPER DELUXE 750

PRICE \$1,499 / CONTACT TI COMPUTERS / PHONE (02) 9437 5437

WEB www.ticomputers.com.au

TI Computers couldn't quite match the feature lists offered by the top two systems this month, but what it missed there it picked up in performance. TI has been around a long time and knows which way is up when it comes to customising computing systems. That includes overclocking, and here it managed to crank up a Core i5 750 to 3.82GHz. Not

only that, the system is an efficient performer, hitting the rare mark of 70 on our UserBench Encode test — you don't get there without knowing what you're doing. It also topped all the non-gaming benchmarks. Elsewhere, Nvidia's GeForce GTX 260 graphics card got up to 40fps on *Crysis* at 1,920 x 1,200 pixels, beating all but the Radeon HD 5850-based systems. The Super

Deluxe 750 comes with a wireless USB dongle, but lacks a digital TV tuner card, which really is the only blight on what otherwise is a top PC.

PC User says: Only a digital TV tuner card short of brilliant.

90%

DCA COMPUTERS POWER ADVANTAGE NOVA

PRICE \$1,499 / CONTACT DCA COMPUTERS / PHONE (02) 9634 2555

WEB www.dcacomputers.com.au

DCA Computers is one of the newer entrants into our 'Best-value PCs' roundup, but it's showing after just a couple of outings that it's on the right track. This Power Advantage Nova doesn't feature wireless networking or a digital TV tuner, but everywhere else it's a good performer. With Intel's Core i5 750 chip overclocked to 3.8GHz,

it delivered a whisker of extra speed compared to the Pacstar i5 Best Value Pack at 3.6GHz. With a 24in widescreen ViewSonic LCD monitor and Radeon HD 5770 graphics card, plus excellent video encoding speed, it's a nice combination that ticks almost all the boxes. A slight reduction in gaming performance and the lack of extra features saw this

slide down the leaderboard a little. With quite a few systems taking the overclocked Core i5 750 route, the tight competition meant extra features would be all that separated the top four systems. Still, this is a pretty decent PC overall.

PC User says: This one has good bones but just needs slightly more flesh on them.

85%

EXCEL COMPUTERS EXCEL AL-260

PRICE \$1,499 / CONTACT EXCEL COMPUTERS / PHONE (02) 9649 6668 / WEB www.excelcomputers.com.au

With each of the Excel systems basically being variations on a theme, we think the AL-260 is the best value. It's another one of a couple of overclocked Core i5 661-based systems, but this time cranked up to 4.15GHz. However, with 2TB of storage, a TV tuner card, wireless networking and a 23in widescreen LCD, it's got a better

balance of features. The Nvidia GeForce GTX 260 (216SP) graphics card delivered better gaming speed at 1,920 x 1,200 pixels than any of the Radeon HD 5770 systems. It has to be said that this isn't a DirectX 11-ready system, but we're yet to see hugely noticeable differences in image detail and quality. All three Excel systems came with

only 2GB of memory, but with just a 32-bit operating system, that's about all you really need. We're not certain the Core i5 661 CPU is such brilliant value, even overclocked, compared to what you can do with a Core i5 750 chip these days.

PC User says: This is a decent overclocked system, but it's still only dual-core.

80%

EXCEL COMPUTERS EXCEL BV-650

PRICE \$1,399 / CONTACT EXCEL COMPUTERS / PHONE (02) 9649 6668 / WEB www.excelcomputers.com.au

All three Excel systems feature dual-core CPUs, including this BV-650. The Core i5 650 got given the gun here, overclocked to just under 4GHz, and that got it to within a whisker of matching most of the overclocked Core i5 750 systems. But there's a significant difference — while

the Core i5 650 delivered excellent audio encoding speed, it couldn't come close to quad-core systems on video encoding. As a result, we wouldn't choose this one if video conversion is a priority. The Radeon HD 5770 couldn't match the heroics of the GM-661's Radeon HD 5850

at 1,920 x 1,200 pixels on *Crysis*, with a sluggish 31.87fps. The 24in BenQ G2420HD monitor was a good inclusion, but you don't get a digital TV tuner card. Notable for its \$1,399 price tag. **PC User says:** Fast overclocked performance for single-core-based applications.

75%

TEST BENCH > Best-value PCs

HARDWARE / SOFTWARE / COMPONENTS

EXCEL COMPUTERS EXCEL GM-661

PRICE \$1,499 / **CONTACT** EXCEL COMPUTERS / **PHONE** (02) 9649 6668 / **WEB** www.excelcomputers.com.au

This was the more conventional of the two Core i5 661-based systems Excel sent in this month. With Intel's performance dual-core processor, Excel added a Radeon HD 5850 graphics card. It came close, but couldn't match the Mwave All-Rounder for 1,920 x 1,200-pixel gaming speed on *Crysis*. However, you get 2,000GB

of storage, thanks to two 1,000GB Western Digital hard drives, along with a digital TV tuner and wireless networking. On the downside, you're only getting a 21.5in widescreen LCD and 2GB of memory; however, with only the 32-bit version of Windows 7 Home Premium, anything beyond 3GB would have been a

waste anyway. If you're looking for something to do your video editing on, and you don't mind your CPU overclocked, there are far better options elsewhere, including Excel's other two PCs. **PC User says:** A well-balanced system, but lacking zip, thanks to its standard-clocked dual-core processor.

MWAVE ALL-ROUNDER

PRICE \$1,499 / **CONTACT** MWAVE AUSTRALIA / **PHONE** (02) 9649 6184 / **WEB** www.mwave.com.au

Mwave is another new entry into our monthly 'Best-value PCs' roundup, but it did a quite decent system for its first effort, with the 1,000GB hard drive being the only obvious weak link. There are still plenty of compensatory features, including an ATI Radeon HD 5850 graphics card that delivered the best gaming result of the

roundup on *Crysis* at 1,920 x 1,200 pixels at a tick under 49fps. You also get a digital TV tuner card, plus 802.11n-grade Wi-Fi networking. Intel's quad-core Core i5 750 isn't overclocked here (a surprise), which limited its overall application speed compared to other similar systems, but the fact that it

topped the gaming charts shows this system has the wheels to get a wriggle-on. It also features the 64-bit version of Windows 7 Home Premium operating system. This is a good first effort — we hope to see them again. **PC User says:** Topped the high-resolution gaming test, but just a little short on features.

PACSTAR AUSTRALIA I3 VALUE PACK

PRICE \$1,499 / **CONTACT** PACSTAR AUSTRALIA / **PHONE** [02] 9868 6962 / **WEB** www.pacstarcomputer.com.au

The I3 Value Pack from Pacstar was left a bit underdone for general performance, thanks largely to its Intel Core i3 530 processor. This low-end dual-core LGA1156 chip is really little better than a Pentium Dual-Core E5400 in terms of application speed. Pacstar chose to combine the chip with a top-end ATI Radeon

HD 5850 graphics card, so it did well in terms of gaming speed. Its UserBench Encode score at 36.63 placed it last in the roundup, whereas on our *Crysis* benchmark, the combination of the CPU and graphics card delivered the third best gaming score at 1,920 x 1,200 pixels — not that you'll need that resolution

with the comparatively small 20in widescreen LCD monitor. There's also no wireless networking or digital TV tuner. The 2TB (twin 1,000GB hard drives) of storage is good, but there's not enough general speed to make it real value in our view. **PC User says: Intel's Core i3 530 processor doesn't do enough compared to others we saw.**

65%

NUBE SATURN 901

PRICE \$1,499 / **CONTACT** NUBE COMPUTERS / **PHONE** [02] 8005 4485 / **WEB** www.nube.com.au

Nube Computers did a fair job of this Saturn 901 system, but it just can't compete with the leading models. The 3.33GHz Intel Core i5 661 performed to our expectations, but elsewhere the value was lacking. It started with the inclusion of only two 500GB hard drives for a total of 1,000GB (the majority of other

systems deliver 2,000GB). There was no digital TV tuner card or Wi-Fi networking, which is fine if the system is loaded elsewhere, but with the monitor only a 21.5in type, there wasn't enough overall performance or features to make the \$1,499 price tag look good against most of the other systems. We couldn't get

Crysis running here due to a weird error we won't hold against it. The GTX 260 graphics card, although not DirectX 11-ready, should deliver similar speed to an ATI Radeon HD 5770. On the upside, this was the fastest standard-clocked system we saw. **PC User says: Needs more work in terms of overall value.**

Intel's new bargain

The **PC User** team tests the latest upgrade components, including Intel's new wallet-friendly Core i3 530.

INTEL CORE i3 530

PRICE \$160 / **CONTACT** INTEL
PHONE [02] 9937 5800
WEB www.intel.com

Intel's new dual-core, Hyper-Threaded Core i3 530 is essentially the same processor as the Core i5 661 we tested back in February (see page 22) — a chip that showed a lot of promise until Intel revealed its eye-watering \$290 price. The only differences here are slower clock speeds across the both CPU and integrated GPU (down from 3.33GHz and 900MHz to 2.93GHz and 733MHz, respectively) and the omission of Turbo mode. At stock speeds, this is a substantial drop in performance. Having said that, if you're willing to overclock, that performance difference dissipates very quickly. We got our Core i3 to a stable 3.6GHz with practically zero effort using Intel's diminutive standard heatsink. At that speed, its Encode 2009 score of 56.92 was

pretty impressive. Push even further and there's no difference at all between Core i3 530 and Core i5 661 — any serious overclocking necessitates disabling Turbo mode on the i5 661 anyway. Differences in GPU speed are also a moot point: Intel's GMA HD ably accelerates 1080p content and Picture-in-Picture, but it's pretty rubbish when it comes to 3D gaming. At \$160, we'd recommend this CPU over the Core i5 661 any day.

— Dominik Krupinski

PC User says: This chip offers tons of overclocking headroom and at a good price.

MSI P55M-GD45

PRICE \$155 / **CONTACT** MSI
PHONE [02] 9748 0070
WEB http://au.msi.com

We're not entirely convinced by Intel's 2010 Core i-series processors. Sure, the i3 530 is nice, but pricier chips? Not so much. For almost \$50 less than a dual-core Core i5 661 (\$285), it's possible to buy a quad-core Core i5 750 (\$240) which, despite lacking integrated graphics, is faster overall. You can then put the money saved towards a discrete GPU, which will put Intel's integrated 'HD graphics' to shame. Combined with a good-quality budget motherboard, that makes for a very respectable system. For this reason, we think a motherboard like this P55M-GD45 makes a very compelling media PC alternative to a number of recently launched H55 motherboards. The P55M-GD45 offers good performance and superior connectivity to

any H55 board we've yet seen. The absence of video-out ports leaves room for 10 USB 2.0, two eSATA and single FireWire and Gigabit Ethernet ports at the rear panel, though S/PDIF (which is lacking in any form) would have been nice. Of course, all that does come at the cost of power consumption and the need to install a discrete GPU. This board isn't hugely thirsty and any budget GPU will significantly outperform Intel's yawn-worthy GMA HD, so we think it's an alternative worth considering.

— Dominik Krupinski

PC User says: An inexpensive, well-featured microATX board. Could do with high-end audio connectivity, though.

ATI RADEON HD 5670, HD 5570 & HD 5450

PHONE 1300 278 788 / WEB www.amd.com

Reviewing budget graphics cards as they launch is a tricky proposition. While there's some argument (albeit a tenuous one) to be made for paying top dollar for the newest, fastest GPU as it appears, initial scarcity and the attendant inflated prices make newly released 'budget' components difficult to rate in terms of value. That's certainly the case with these new Radeon's, which round out the bottom end of AMD's DirectX 11 lineup. All three carry prices that don't currently sit well with the performance they offer and need to drop somewhat before we can recommend any of them.

Going from top to bottom, the HD 5670 is the most powerful of the new Radeon's and the only one that offers a compelling GPU package in the traditional sense. Like the rest of AMD's 5000-series cards, it's a DirectX 11 GPU manufactured on a 40-nanometre process, which makes for low power usage and reduced heat output. As such, being a relatively small low-end card, it doesn't require any additional PCI Express (PCI-E) power connectors to run. It's also the least expensive GPU in AMD's lineup to use GDDR5 memory. This means that even across the card's relatively narrow 128-bit memory interface, there's enough bandwidth to keep the 5670's 400 stream processors busy and produce (relatively) smooth performance at resolutions up to 1,680 x 1,050. Even DirectX 11-quality settings aren't out of the question, though our ASUS card only just cracked 30fps in our relatively lightweight DirectX 11 *DIRT 2* benchmark, so we wouldn't bet on the HD 5670's longevity with more demanding upcoming titles. Additionally, while there is smooth gameplay to be had with the HD 5670 on smaller (22in and under) monitors, at around \$150 online, it's actually more expensive than the significantly more powerful

(albeit DirectX 10.1 only) Radeon HD 4850.

Stepping down to the HD 5570 actually offers a potentially more interesting product. Internally, it's exactly the same as the HD 5670, only with GDDR3 memory taking the place of GDDR5 and slightly lower clock speeds. Looking at our results table (see page 26), it's obvious that there's a significant performance hit involved and we really wouldn't recommend the HD 5570 for anything but casual gaming. Given the card's performance, its DirectX 11 capabilities are a moot point, too. However, the HD 5570 is also physically much smaller — it's a low-profile card capable of fitting into small, cramped cases — and this may hold some sway with home theatre PC system builders or business users looking to take advantage of AMD's multi-monitor Eyefinity technology to output to three displays simultaneously. Just be sure to opt for a model with a DisplayPort output if you're after the latter, and have at least one DisplayPort-compatible monitor. At \$120, the much faster HD 4850 is close in price, if you have the case room to spare and you aren't interested in Eyefinity.

Finally, the HD 5450 rounds out the bottom of AMD's current GPUs. It's a tiny, power-frugal card that's completely passively cooled. Normally, at a sweet enough price, that would garner our recommendation as a media PC part, but honestly, we're not really sure of the appeal. A look at our table will tell you that this isn't a gaming card at all — it's designed to accelerate HD content, which it does very well

ASUS U3S6

PRICE \$50 / CONTACT ASUS / PHONE 1300 278 788 / WEB www.asus.com.au

We've seen USB 3.0 and SATA 6Gbps as features on a number of recent motherboards. SATA 6 hasn't done much for us, but USB 3.0 is pretty impressive. Theoretically, USB 3.0 offers 10 times the transfer speeds of USB 2.0 at 4.8Gbps, but overheads and the read/write speeds of external mechanical hard drives realistically limit that to a bit over double USB 2.0 performance — at least for now. Still, if you're filling a 1TB external drive, that's nothing to sneeze at. This PCI-E add-in card offers the benefits of USB 3.0 and SATA 6Gbps connectivity without the need for a motherboard upgrade. Slotting into a spare PCI-E x4 (or greater) slot, usually reserved for a second GPU on cheaper motherboards, the ASUS U3S6 offers two USB 3.0 and two SATA 6Gbps connectors. Testing against an ASUS P7P55D-E PRO motherboard's integrated USB 3.0 ports with a 1TB USB 3.0

mechanical drive, we found its performance to be very close, only marginally slower when writing multiple small files. We think that's pretty decent. What's more, even with a bandwidth-thirsty GeForce GTX 295 GPU in our primary GPU slot, we didn't see any degradation in 3D performance from installing this card; an issue we'd feared, given the P55 chipset's relative paucity of PCI-E 2.0 bus bandwidth. Ultimately this isn't a replacement for a proper USB 3.0/SATA 6Gbps solution, especially if you're plugging in multiple devices that may strain the bandwidth offered by a PCI-E x4 connection. For now, though, with the speed of external drives being the main bottleneck, we think this is a worthy and relatively inexpensive alternative to a new motherboard.

— Dominik Krupinski

PC User says: Adds USB 3.0 and SATA 6Gbps on the cheap. What's not to like? ☺

Building Networks for People

Budget laser printers

Darren Yates tests five of the latest mono laser printers under \$200.

When HP's first 8ppm LaserJet printer arrived in the office environment, it sold for over \$4,000. Today, the 13ppm LaserJet P1005 sells on the street for around \$125, and it's not the cheapest. Samsung couldn't get hold of its ML-1640 laser printer, which sells in major retailers for as little as \$83, but we did find five models selling for under \$200. For basic mono printing, nothing comes close to laser printers for speed and quality. While not all models handle mono printing of photos especially well, they make bulk text printing a far more affordable option over the longer term, compared with inkjet printers.

How we tested

We connected each printer using its USB port to an Acer Aspire X3900 desktop PC running Windows 7 Home Premium. We ran a series of tests, including one- and 10-page text documents and an A4 JPEG image. We timed each test from the last interaction with the printer driver software to the last page released from the printer. We checked and compared overall print quality and looked at the page yield and cost per page of each model. We also compared functionality and design before giving each unit an overall score out of 100.

Tech terms

Auto-duplexer. A device built into some printers that enables both sides of the page to be printed without turning the page over manually.

dpi (dots per inch). The measure of resolution or the ability of a printer to print fine detail.

ppm (pages per minute). The normal print speed rating given to printers. However, laser printers give their rated speed at best quality, while inkjet printers only do so in low-quality draft mode.

HP LASERJET P1005

PRICE \$125 / CONTACT HP
PHONE 13 23 47
WEB www.hp.com.au

While the online price of this LaserJet P1005 has climbed a little since we last looked at it in January 2009 (yes, it's still a current model!), it continues to be a very decent all-round buy. The P1005 delivers excellent print quality at a bargain price — there are no fancy extras such as Ethernet networking or duplex printing, but if you're after a mono laser that does a decent job of black-and-white photo printing, this was easily the best of the five. Text print quality was excellent, with nicely weighted characters, and the photo printing was also top-notch, with none of the banding we saw on the bulk of other models. We did have a minor problem with the driver installation not completing on Windows 7,

so we had to go into Device Manager and use the driver update option to finish it off; however, the effort was worth it for the overall print quality. Unfortunately, the paper tray is open, so in humid environments it may affect your paper stock. At 5c per page, it wasn't the cheapest to run, but with decent mono photos, we think the print quality makes it worth the extra cost.

PC User says: Getting long in the tooth, but still leads the pack.

CANON LASER SHOT LBP3100B

PRICE \$145 / CONTACT CANON
PHONE 13 13 83 / WEB www.canon.com.au

The LBP3100B is Canon's entry-level laser printer and a little pricey at \$145 online, but it's not a bad model overall. It connects via USB only, but although the driver disc has no problem with installation on Windows 7. Print quality here is above average, with very good text quality and pretty decent mono photo quality. We did see very thin, only just noticeable banding on our test image, though. While it's not as good as the HP, the LBP3100B still managed to do a better job than everything besides. There's little to separate the Canon, HP and Samsung models in term of print speed, with the Canon taking just under 44 seconds to spit out our 10-page text document. The toner cartridge sells for around \$80 and is good for 1,500 pages, so it's on par with the P1005 for running costs.

While this isn't a bad printer, we'd go for the P1005 for its slightly lower cost and slightly better print quality.

PC User says: A decent printer, but doesn't quite match the HP.

FUJI XEROX PHASER 3125N

PRICE \$199 / **CONTACT** FUJI XEROX
PHONE 13 14 12 / **WEB** www.fujixerox.com.au

75%

One of the few network-ready lasers you'll find for under \$200, the 3125N is a bit boxy in its design, but has speed to burn. Our 10-page text document test took just 32.22 seconds, more than 10 seconds faster than the others. Despite featuring two driver discs, neither would install on Windows 7, so we had to download a 28MB driver install file from the Fuji Xerox web site. It's pricey at \$199, you do get Ethernet networking built in; not only that, you also get USB and parallel printer interfaces. If you're after a mono laser with a parallel printer port, this is the only one we've seen in a long time. It's also slightly cheaper to run than the Brother, with a high-capacity 3,000-page yield toner cartridge. While its text quality was generally good, this one exhibited minor banding on photo prints, so we'd steer clear of doing that here.

PC User says: Not great for photos, but it's fast and versatile.

SAMSUNG ML-1660

PRICE \$129 / **CONTACT** SAMSUNG
PHONE 1300 362 603
WEB www.samsung.com/au

70%

The ML-1660 is the brand-new model up from the incredibly cheap ML-1640 and it won't be available in stores until March 19. However, at \$129, this compact printer just doesn't deliver the same quality as the HP LaserJet P1005. It's USB only, features open paper trays and as you'd expect with such a new model, had no trouble installing its driver software into Windows 7. While the text quality here was good (just a little thinner than the HP), photo printing wasn't great. Noticeable banding right across the image makes this printer unsuitable for that sort of work. Print speeds were also slower than the P1005; in fact, only the Brother HL-2140 was slower. The ML-1660 is one of the smallest, most compact laser printers we've seen and it's great for text work, although we'd take the LaserJet P1005 first.

PC User says: An ultra-compact laser printer, but it can't match the HP.

BROTHER HL-2140

PRICE \$99 / **CONTACT** BROTHER
PHONE (02) 9887 4344
WEB www.brother.com.au

65%

The HL-2140 is still out there in the market and a little cheaper than when we looked at it last time. While it's the cheapest of the five to run, the ozone smell produced by the printer doesn't make this an ideal choice if your home office doesn't have adequate ventilation. It's a pity because it's the only one at a decent price with an enclosed paper drawer. It's also 1c per page cheaper to run than the other models. It even gives the ML-1660 a run for being the most compact model around. While it was the slowest to spit out a single text page, it still managed to pump out all 10 pages of our other test in under 40 seconds. The printer was designed back in the era of Windows Vista, so Windows 7 drivers are available on the Brother web site. This is certainly a cheap printer, but the ozone smell was just too strong.

PC User says: Cheap to buy and run, but the ozone smell is overpowering.

Buyer's checklist

If you're about to buy a laser printer, here are some things we think you should check.

* **Smell.** This sounds strange, but you really need to try and get an idea of how strong the smell of a laser printer is when it's printing. Most laser printers produce some ozone gas, which isn't good for you. Some printers filter this better than others, so try to get a whiff before you buy.

* **Driver support.** Support for Windows 7 isn't guaranteed, nor is it for Linux or Mac OS X, so choose carefully.

* **Peripheral ports.** While USB 2.0 is a definite on any printer, few offer parallel printer ports and networking at these low prices.

* **Paper drawer.** Ideally, a laser printer should keep its paper stock inside an enclosed drawer to keep it out of the humidity, which can cause paper curl. Few do at the entry-level end of the market.

Loud & clear

Henry Winchester tests 10 gaming headsets to help you pick the right one.

Our sound setups tend to be as unique as our fingerprints. Some people go all out for a gold-plated speaker system, while others are happy with onboard sound and a \$10 pair of speakers from Harvey Norman. We can all be united on one front, though: headsets.

So how do you choose the right ones? Comfort has to be a priority and extra features are important, although not quite as important as good-quality sound.

While 5.1 surround sound has made its way into our headsets, it's beset with one major problem: is it really surround sound you're listening to? Cramping three tiny speakers into a headset also seems counter-productive when you could simply have a single giant speaker blasting out decent-quality audio instead.

Another major technology that's become more prevalent is USB connectors and built-in sound cards. It's a good idea for notebooks, although we've had more aural joy and less tedious driver issues with a proper sound card and 3.5mm jacks.

We put 10 headsets through their paces and found that great audio quality doesn't necessarily mean paying a premium.

How we tested

Our intense testing process involved playing *Half-Life 2* and listening to a variety of detailed and rich music tracks to give the drivers a good workout. Mics are a tad more tricky to test, so we turned them up to full and recorded some audio to check for sensitivity and any background noise. To test the comfort of each headset, we wore them for at least two hours. If they were too tight or our ears got too sweaty, they were marked down. We also used them in a noisy office environment to see how they blocked out ambient noise.

_ REVIEWS

CREATIVE FATAL1TY PRO SERIES GAMING HEADSET MK II

PRICE \$65 / CONTACT CREATIVE / PHONE (02) 9021 9800
WEB <http://au.creative.com>

We're massive fans of Creative's MK I Fatal1ty headphones, which sounded incredible without costing the Earth. The latest revision changes the shape from oval to oblong, but the overall quality remains. In terms of sound, these are still our favourites. They block out just enough background noise that you can hear what's going on, but games still sound punchy and defined. They're comfortable enough to wear for extended periods and the detachable mic means you can even wear them on the street without looking like a lost flight controller. The mic itself is compatible with Creative's

own Silencer tech, muting input when you're not speaking. And at \$65 — lower than most other sets here — these ones are a genuine steal.

PC User says: Brilliant audio quality at a very reasonable price.

STEELSERIES SIBERIA V2

PRICE \$150 / CONTACT SYNnex
PHONE 1300 100 100 / WEB www.steelseries.com

The original SteelSeries Siberia's neckband was applauded on release, but I found wearing them akin to being strangled by a giant white crab. The sound was detailed, but they were way too tight. Thank heavens for the Siberia v2. An over-the-top set, they're so comfortable and light that you don't even know they're there. And from the amount of phone calls I've missed this afternoon, I can tell you that they do a good job of blocking out background noise as well. These are only 2.0 headphones, but team them with a decent sound card and you've got a wonderful audio solution. The Siberia v2 also looks awesome and the tiny, responsive mic tucks away nicely.

PC User says: Light and comfy, these offer great sound quality and noise-cancelling features.

ZALMAN ZM-RS6F+M

PRICE \$60 / **CONTACT** ALTECH COMPUTERS
PHONE (02) 8831 9999 / **WEB** www.zalman.com

Have you ever wanted to look like Lobot from *The Empire Strikes Back*? Now your Lobot dreams have come true with Zalman's beast of a headset. It weighs a ton, but it did deliver the most convincing 5.1 surround sound out of any of the purported surround sound headphones we tested. Zalman has been quite smart in omitting a USB connection in favour of the more standard set of three 3.5mm jacks. This means

it can be plugged straight into a sound card, so there's no stuffing around with configuration software. The sound itself lacked bass and the newsreader-style clip-on mic was a bit of a pain to use. Most importantly, though, they do deliver what they promise — if you don't mind looking like our good friend, Mr Lobot.

PC User says: Offers the best 5.1 surround sound of any headset here.

PLANTRONICS GAMECOM 367

PRICE \$50 / **CONTACT** PLANTRONICS / **PHONE** (03) 9326 1653 / **WEB** www.plantronics.com.au

Speaker theory goes that the bigger the driver, the better the sound quality. This is because the larger sound waves generated by the cones are more readily picked up by your ears. Of course, this doesn't always apply to headphones, as they're much closer to your inner ear, but the theory remains. The drivers here are huge at 50mm. The

Plantronics GameCom 367 weighs a fair bit, and some may not be keen on the '80s-style square design, but they do deliver a full-bodied sound and the specially designed earpads are made to redistribute pressure for comfort. I was also genuinely shocked when I found out they sell online for only around \$50. They pale in

comparison to the SteelSeries and Sennheiser units, but for the price, you could do far worse. Our only complaint is the mic, which is a tad too sensitive.

PC User says: Excellent sound quality from bargain headphones.

SENNHEISER PC 350

PRICE \$270 / **CONTACT** SYNTec / **PHONE** 1800 648 628 / **WEB** www.sennheiser.com.au

Put on Sennheiser's PC 350 headphones and you won't be able to hear a single thing; that's how good this set is at blocking ambient sound. At \$270 however, these are the priciest headphones we tested in the roundup. They are also the quietest — crank them up to maximum and it's just not deafening enough for our tinnitus-inflicted auditory sensors. However, it's at lower

volumes are exactly where they pull through — even at a shade above silence, we could clearly hear gunfire from a mile away. One for cashed-up online gamers then. The mic is incredible and coupled with an X-Fi sound card, you'll be able to pick out where a sound's coming from better than with a 5.1 setup.

PC User says: The sound quality is great, but the price puts it out of reach of most gamers.

CYBER SNIPA SONAR 5.1 HEADSET

PRICE \$90 / **CONTACT** CYBER SNIPA / **PHONE** (02) 8011 4370 / **WEB** www.cybersnipa.com

Cyber Snipa has made a reputation for itself in the world of inexpensive yet decent mice. Its 5.1 headset packs three speakers into each headphone; unfortunately, setting them up wasn't the best experience, as the drivers crashed Windows every time we tried to make adjustments, and once we actually got them

up and running the software proved to be difficult to navigate. However, they do work — the surround sound effect isn't very convincing, but it's there. Like all the 5.1 headphones we've looked at, you'd be far better off with a surround speaker system, but these are a fair compromise. They're not bad for the price and the mic does the job. If you want

proper 5.1 surround sound, we'd go for the Zalman headphones instead.

PC User says: A decent headset, but the surround sound isn't convincing.

SENNHEISER PC 300 G4ME

PRICE \$125 / CONTACT SYNTec / PHONE 1800 648 628 / WEB www.sennheiser.com.au

Sennheiser's portable PC 300 G4ME headphones are better than the SteelSeries set below, delivering nicely defined sounds at respectable volumes. The mic is built into the lead, unlike the Siberia in-ear phones, although it won't pick up subtle throat sounds. Sennheiser promotes the headphones as noise-cancelling, but they're passive rather than

active in this respect, relying on silicone earplugs to block out background noise. They do a fairly decent job, but it's nothing special when you consider that a cheap set of headphones can do the same thing. At \$125, the cost is too steep — we reckon they're worth about half that. We also can't understand Sennheiser's failure

to include the four-way jack so you can use these with an iPhone.

PC User says: While they're designed better than the SteelSeries earphones, full-size headphones will cost less and sound better.

70%

STEELSERIES SIBERIA IN-EAR HEADSET

PRICE \$70 / CONTACT SYNTEX / PHONE 1300 100 100 / WEB www.steelseries.com

With 3G dongles and increasingly powerful laptops available, gaming on the move is becoming more of a possibility; however, you don't really want to lug around headphones as big as your netbook. These in-ear phones offer a decent alternative, as they're nicely portable and even include their own little storage pouch. Ultimately, though, the SteelSeries Siberia option is a let-down. The sound

was tinny and flat, and lacked volume. They're touted as reducing background noise and like the Sennheisers above, this is passive rather than active. The giant mic seems like a nice idea, but it requires that you clip it to your clothing. Do that and you'll be able to hear your aortic valve creaking open — that's good for heart surgeons, but not so good for gamers. Music playback did sound slightly

better, but overall, we'd still recommend proper headphones for gaming on the go.

PC User says: They're nicely portable, but the audio quality leaves a lot to be desired.

65%

LOGITECH G35

PRICE \$155 / CONTACT LOGITECH / PHONE 1800 133 274 / WEB www.logitech.com

As far as PC User is concerned, when it comes to mice and keyboards, Logitech can pretty much do no wrong. And with its speakers being rather good, it seems natural that the company should be able to muster a decent set of headphones, but it hasn't in this case. There are a whole heap of controls on the G35's left headphone, which should be handy, but it actually makes it seem like you're wearing a mouse on the side of your

head. We'd rather have an inline remote than have to fumble about in the dark. Unfortunately, the problems don't end there. We had absolutely no luck getting the supposed 7.1 surround sound to work and every game we tested reverted to stereo. To be fair to Logitech, though, the G35 is a well-made, comfortable set of headphones. However, in the end, we found the poor controls and lack of surround sound pretty

much a deal-breaker.

PC User says: These headphones are let down by the fiddly controls.

60%

GENIUS HS-04SU

PRICE \$20 / CONTACT ALTECH COMPUTERS / PHONE (02) 8831 9999 / WEB www.geniusnet.com

We wouldn't have really thought headphones were something you could get wrong, but the Genius HS-04SU set was pretty underwhelming compared to all the others here. They may look like decent headphones for the \$20 price tag, but they weren't so great in use. The headband looks like something

you'd use to secure a sign to a pole and the headphones are one-size-fits-all, if the 'all' in question have enormous heads. While that was fine for me, it probably won't be for people with average-sized heads. Another problem is that they also slip down as soon as you make any kind of adjustment,

which means the already tinny sound becomes weaker, as it's not being pumped directly into your ears. Worse still, they made our ears itch. I think I'm allergic to poor-quality sound.

PC User says: Tinny audio and only for those with large heads.

_ BROWSERS & ADD-ONS

* **Flock** (www.flock.com). The browser scene has become more interesting with the addition of Google Chrome, but Flock is really pushing the envelope. Dubbed The Social Web Browser, Flock marries web surfing and social networking. If you tweet, Facebook, Flickr or hang out on other social networking sites, Flock makes it easy to keep tabs on your friends as you roam the net. A media bar across the top spotlights YouTube, Flickr and other media content, while sidebars house streams from Twitter, Facebook and other social sites.

* **Opera 10 with Unite** (www.opera.com). Opera pioneered many of the features we've come to expect as standard in our browsers and its latest version, 10, continues in this pioneering spirit. It adds a server, Unite, to Opera's bag of tricks. Unite lets you serve up content from your computer to those on your A list: stream your music library over the internet, share files or host a web site. Add Unite to the list of other innovations, like draggable tabs with hidden web page previews and a customisable speed dial page.

* **Quix** (www.quixapp.com). Quix is a handy tool for the geeky and keyboard oriented. It has the potential to be the bookmarklet to end all bookmarklets. If your bookmarklets toolbar is filling up with other bookmarklets for services such as Readability or URL shorteners like bit.ly and TinyURL, use Quix, an extensible bookmarklet, to replace them. Quix includes dozens of predefined shortcuts and you can add your own quite easily. For instance, click the Quix bookmarklet and type **w <search phrase>** to search Wikipedia; type **fb** to share the current page on Facebook; type **bitly** to shorten the current page's URL using bit.ly.

* **Xmarks** (www.xmarks.com). Xmarks synchronises your bookmarks and passwords

Communications tool

MailChimp (www.mailchimp.com). Email marketing meets social networking, that's MailChimp. With this service you can send four newsletters or promotional emails to 500 subscribers each month for free, making it perfect for sporting and social clubs as well as any organisation with a small mailing list. MailChimp gives you list management tools, good-looking templates plus the ability to create your own campaign-tracking tools to monitor the effectiveness of your emails, and a whole bunch of advanced features including RSS integration and Google Analytics. It works hand in hand with WordPress, Eventbrite and Twitter, and you can track your campaigns and sign people up via your phone with MailChimp Mobile.

Deliver professional-looking email newsletters with the help of MailChimp.

across all your computers. It works with Internet Explorer, Firefox and Safari (on the Mac) and you can use it to keep any number of computers in sync. It works by backing up your bookmarks to a web site. To use it you need to sign up for a free, password-protected account and then use that account to access your bookmarks on the Xmarks web site, as well as on your computers. Xmarks also optionally provides site information in your Google search results and in your browser's address bar.

FILE DOWNLOADING, SHARING & SYNCING

* **Dropbox** (www.dropbox.com). Dropbox takes the pain out of sharing files. It lets you synchronise files across all your computers at home, at work and on the road; pool files for collaboration with workmates, family or friends; create online photo galleries in an instant; and share any single file simply by sharing a URL. Dropbox is smart about the way it copies files. If you modify a file on one computer, only the changes are synced to your other computers, saving on bandwidth and making for swift updates. Dropbox consists of a small program and, with a free account, 2GB of web-based storage.

* **drop.io** (<http://drop.io>). Need a space to chat, show a presentation, share files, music and video? drop.io lets you create a private space (called

a Drop) with a couple of clicks. Give out the address and optional password to your Drop and others can join you for real-time collaboration. You and your collaborators can upload content using email, Facebook, a Firefox extension, an Outlook plug-in or via phone. Perhaps the coolest feature is that it streams new content without any page refreshes, so as people contribute to the Drop, the conversation and content flows onto your screen.

* **FileZilla** (<http://filezilla-project.org>). FileZilla is a free open-source FTP (file transfer protocol) app, with both client and server versions. It's fast, runs on Windows, Linux, Mac and several other platforms, and provides secure transfers. It can handle the transfer of multi-gigabyte files with resume and transfer. The tabbed, graphical interface supports drag and drop and it has an easy-to-use site manager.

* **Free Download Manager** (www.freownloadmanager.org). Here's a one-stop solution for your file downloading needs. Free Download Manager (FDM) lets you manage downloads via HTTP, FTP and BitTorrent. It includes download acceleration to speed up multi-file downloads and download resume to save you from hair-tearing if a big download crashes before completion. Its HTML Spider lets you download an entire site or specific types of files from a site. FDM also lets you grab video from YouTube and other sites and save it in FLV or convert it to other formats.

_ IMAGE EDITING & MANAGEMENT

* **Aviary** (www.aviary.com). Aviary is where

Flock marries your browsing and social networking lives.

1 TripIt (www.tripit.com) makes travel planning a pleasure. Sign up for an account and, if you like, connect with friends who are also using TripIt.

2 Send your confirmation emails from travel agents, airlines, hotels and restaurants to plans@tripit.com.

3 TripIt turns your raw emails into a beautifully presented itinerary. It pulls in maps, weather reports and sightseeing tips, and sends you calendar updates and plans via phone. It integrates with a host of apps, including Facebook, LinkedIn and mobile apps like Flight Update Pro.

web-based applications are heading. Avary houses a beautifully designed set of tools for creating and sharing visual and audio art. The Flash-based tools include audio, image, vector, effects and colour editors, an image markup app and screen capture. They're easy to use off the bat and video tutorials help you go further. Share your content with the Avary community (you retain the original rights), and view and dissect others' creations using the Avary tools. There's a paid subscription that lets you watermark your creations and keep files private.

* **Picasa** (<http://picasa.google.com>). Picasa is one of those apps everyone should have. Google's photo manager and editor is easy to use and contains an ever-expanding set of features. A recent addition is face recognition. Tell Picasa who's in a photo and it will take a stab at recognising them in other photos. It claims to be able to spot the same person aged five and 50 — give it a try. Use Picasa Web Albums to share your content online.

* **Picnik** (www.picnik.com). So, you have photos on Flickr, Webshots, Picasa Web Albums and Facebook. All over the place, in fact. Picnik can open and edit your pics from almost anywhere on the web from

SECURITY FREEBIES

* **KeePass Password Safe** (<http://keepass.info>). If you use your pet's name or 'password' as your password, it's time you installed a copy of this tool. This password keeper lets you create strong passwords for all the sites you visit and accounts you keep, and then use either a single master password or a key file or both to protect them. The key file method is more secure, although it's more of a hassle — you store the file separately on a memory stick or CD and insert it to gain access to your passwords. KeePass can generate strong passwords for you to ensure your data is kept safe, although there's no real way of testing its claim that "the sun will go nova before you have decrypted the database".

* **LogMeIn Free** (<https://secure.logmein.com/products/free>). Get remote access to your computer with LogMeIn Free. You install LogMeIn on the computer you want to control remotely and then log in from another computer, either PC or

Mac, to get control over the remote's operating system and applications. It supports Wake-on-LAN (WoL), so if the computer you want to control supports WoL and is in sleep mode, LogMeIn will wake it up. You won't get the ability to transfer files or print using the free version; for that you'll need to go Pro.

* **Avast!** (www.avast.com/free-antivirus-download). Alwil gives away a version of its Avast! antivirus software that you can use on any or all of your home computers. It's a feature-limited version of Avast! Pro and Avast! Internet Security, suitable for average computer usage. Combine it with one or two of the free spyware programs and you have decent protection. Avast! not only spots and removes virus infections, it provides real-time monitoring against new infections, prevents sites from hijacking your browser and disinfects mail you send and receive. It works fairly quietly on the whole without hogging system resources.

your computer. You can then transform your photos using a simple set of automatic editing fixes plus a palette of effects. Picnik's free, but it has rather annoying ads; you can upgrade for a couple of bucks a month, do away with the ads and get advanced editing tools and batch uploading.

*** Photoshop.com (www.photoshop.com).** If you're looking for sophistication in an online app, it's hard to go past photoshop.com. Adobe's online photo editing program. It's a beautiful venue to share your photos with others and it lets you pull in photos from Facebook, Flickr, Picasa Web Albums and Photobucket. The editing tools are considerably more powerful than those you'll find in a free Picnik account and they work smoothly. You get 2GB of space to house your photos in the free account.

STREAMING MEDIA

*** NetVideoHunter (http://netvideohunter.com).** Video proliferates across the web, but it's not always easy to download the videos you see online. NetVideoHunter makes it a whole lot easier. This Firefox add-on ensconces itself in the browser's status bar and automatically keeps an eye out for videos on each page you visit. Click its icon to see a list of videos from sites you've visited recently and then click the Download button to grab a local copy. Most of the videos are downloaded in FLV format; you can use Applian's free FLV Player to view them.

*** Vuze (www.vuze.com).** Vuze is a stylish video player that plugs into content using BitTorrent peer-to-peer file sharing. Use your computer (PC or Mac) to grab the video and then view it in full high definition on your TiVo, PlayStation, Xbox, iPod, iPhone or any of a number of other devices. Vuze handles all the format translation for you; just drag a video from the Vuze Library to any device and Vuze will convert it if needed. Lurking beneath the pretty interface are plenty of stats, tools and configuration options to keep techheads happy.

Use Aviary's suite of editors to create audio and visual works online.

MEDIA PLAYERS & MANAGERS

* EventGhost (www.eventghost.org).

EventGhost will help you get your remote control working with your computer. It allows you to program your remote—the one that came with your TV tuner or one that you bought separately—to do just about anything in Windows or in your favourite media application. It's a little overwhelming at first, but once you get the gist of programming with it, it's easy to use.

*** FLV Player (www.applian.com/flvplayer).** FLV Player plays video in the popular Flash Video format, including videos from YouTube and many other sites. You can view videos full-screen or zoom in and out. It works well in conjunction with video scavenging tools like NetVideoHunter.

* MediaMonkey (www.mediamonkey.com).

MediaMonkey has a truckload of tools to manage, rip, tag, sync and burn your audio collection. It'll download album art and tag music already in your library, while the built-in tag editor supports a variety of audio formats. Subscribe to podcasts, burn discs using the integrated burner and, of course, play anything in your library. MediaMonkey has its own media player and it's also happy to work hand in hand with Winamp (www.winamp.com) as the player.

*** MediaPortal (www.team-mediaportal.com).** Like Windows Media Center, but better. MediaPortal is a little more complicated to set up and get running, but after the initial learning hump, there are big rewards. It has a superior interface and much better file format support and plug-in architecture, so you can add to its base capabilities.

*** Tversity (http://tversity.com).** Tversity is a UPnP AV/DLNA media server. What that translates to is a program that sets up your PC to serve media files to a networked media player, such as an Xbox 360 or PlayStation 3. You designate the files you'd like to make available and the next time you fire up your console and check the video section, your PC running Tversity will appear.

* VLC media player (www.videolan.org).

Can't get Windows Media Player (WMP) to play a file? Try VideoLAN VLC media player.

This WMP alternative can play almost any media file you toss at it and it runs on all sorts of operating systems. VLC media player plays files on your computer, DVDs, VCDs and CDs, and it can handle input from TV capture cards and a variety of streaming formats. It's skinnable, too.

* XBMC (http://xbmc.org).

A great media player and desktop replacement for WMP (it also runs on other operating systems). XBMC

Keep your bookmarks and passwords in sync and available online using Xmarks.

is ideal for lounge room and other home theatre PCs, as it replaces the Windows interface with one appropriate for television screens. It also plays just about any file type you can think of. It doesn't do TV programming and recording yet; if that's what you're after, try MediaPortal.

OFFICE APPS

* Acrobat.com (http://acrobat.com).

Adobe has designed a web-based app that's as good looking as anything you'll find offline. Acrobat houses your files online and provides a word processor, a spreadsheet and a presentation program with which you can edit and create documents. It also lets you convert a handful of documents to PDF format and host web conferences with a couple of people; you'll have to upgrade your free account if you want to eliminate these limits. The programs are easy to use and Adobe includes video tutorials to get you started.

* Foxit Reader (www.foxitsoftware.com).

You can't surf the net without encountering PDFs. Adobe's been very successful in promoting its portable document format, but it's been less successful in developing a PDF reader that makes its users happy. Adobe Reader can be sluggish and Adobe takes its time in addressing problems in the software. Enter Foxit Reader. Sleeker, faster and more reliable than Adobe Reader, Foxit also gives you extras including an annotating tool and PDF-to-text conversion. It's security conscious, too, and won't connect to the internet without your permission.

*** Go-oo (http://go-oo.org).** So you know about OpenOffice.org, but have you heard of Go-oo? It's another office suite, designed to be faster and offer greater compatibility with Microsoft Office formats. It not only supports Microsoft Excel and Word formats, it also provides support for documents created in Microsoft's low-end suite, Works, plus WordPerfect Graphics and Lotus Word Pro. It will run on Windows, Linux and the Mac, as well as a bunch of more esoteric platforms.

*** Lovely Charts (www.lovelycharts.com).** With Lovely Charts you can create flowcharts, organisational diagrams, network charts, stemmaps and more. This browser-based app,

FREE SET UP**

ASUS DSL-N11

802.11n ADSL 2/2+ Modem Router with 4 Ethernet Ports

Setting up a new Network Router can be a time consuming, and difficult task. Asus has released a new range of routers with simplifying internet connections and online support in mind. The DSL-N11 is an impressive ADSL2+ modem router that is essentially an all-in-one device. With ADSL2/2+ support, wireless capability, 802.11 b/g/n for superfast speeds, four 10/100 Mbps Ethernet ports, WPS support, secure WEP64/128bit/WPA-PSK/WPA2-PSK as well as DMZ/Port forwarding, this is a device that is designed to perform at its peak at high-end internet speeds.

Best of all is how easy it is to get the DSL-N11 up and running. Using Asus's Quick Internet Setup (QIS), the router will automatically detect your WAN connection as soon as it's plugged in to your modem and PC. Too easy!

Using simple instructions, usernames and passwords are entered and the system is then online. All in 70% less time than a standard setup. Once you're up and running an intuitive graphical interface (pictured) simplifies the users' ability to manage their network and alter settings.

EZQoS and DR.Surf

EZQoS allows the user to set bandwidth priority and manage the network traffic with just a click of a button instead of defining values and the location of the bandwidth control. Behind the scenes, DR.Surf acts as your own personal helpdesk, offering real-time diagnostics to monitor your connection status as well as diagnose and report any problems.

Unlike other routers, the DSL-N11, RT-N13U and RT-N16 provide a user friendly graphical interface, click on the computers in the network map to manage their settings.

Turn your printer into a network printer

Allows users to share their existing local printer on the network in just three simple steps via a USB connection, effectively turning it into a network printer that can be accessed by multiple PCs. Available in RT-N13U and RT-N16.

File sharing

Access and share files from multiple devices on the network via USB, including NTFS reading and writing as well as FTP access and SAMBA file sharing. Files on external hard drives can be shared across the network via a USB connection with AiDisk. Users only need enter their DDNS address in the browser to access the files on the external hard drive. Available in RT-N13U and RT-N16.

Downloading

Downloading files from the Internet onto the external HDD is a simple process using the Download master software which supports HTTP/FTP/bit-torrent protocols with the capability to support up to a massive 300,000 sessions (seeder) for faster downloads. Plus, to keep green, files are downloaded with the router, so the PC can be shut off to save you power, and money! Available in RT-N13U and RT-N16.

DSL-N11 SPECS

- 802.11 b/g/n
- ADSL2/2+ support
- Four 10/100 Mbps Ethernet ports
- WPS support
- WEP64/128bit/WPA-PSK/WPA2-PSK
- DMZ/Port forwarding

RT-N13U

Wireless N-Router with All-in-One Printer Server.

The major features of the DSL-N11 can also be found in ASUS's series of Wireless routers including the RT-N13U and the RT-N16...

RT-N16

Multi-functional Gigabit Wireless-N Router with storage, printer and media server.

built using Adobe Flex, is surprisingly simple to use yet remarkably flexible. With a free account, you can create any number of charts, but you can only save one to your account. When you're done, export your chart to a JPG or PNG graphic for printing or publishing on your blog or web site.

*** PDF to Word (www.pdf2word.com).** Nitro Software provides a suite of free online tools for handling PDFs. Use PDF to Word to convert PDFs to Microsoft Word or Rich Text Format so you can edit the content. PDF to Word does an extraordinarily good job of conversion, preserving almost all the original formatting, even in complex documents. Simply upload your PDF, select DOC or RTF conversion, and provide your email address for the resulting file. You'll find links to Nitro's other free tools, including a

PDF Editor and PDF to Excel, on the same site.

SEARCH

*** Collecta (<http://collecta.com>).** What's happening on the internet right now? Collecta will tell you. This search engine scours the web for current news, happenings, tweets and blogs. Its three-pane interface houses your recent searches on the left, a results stream in the centre and the selected item's contents on the right. Recent results bubble to the top; click the 'Older Results' bar to scroll chronologically through the list.

Diagram your life with Lovely Charts.

THREE BEAUTIFUL WAYS TO TWEET

If you're still logging in to <http://twitter.com> to use Twitter, it's time you moved on. Seesmic Web (<http://seesmic.com>) lets you do so without leaving your browser. It provides a beautifully clean, simple browser-based view of your twitterverse. The left-hand side houses a panel from which you can select the types of tweets to display in columns on the right. Seesmic supports lists, saved searches and trending topics, as well as mentions, favourites, direct messages, and so on. You can switch between handsome black-and-white themes and you can also switch the interface between several languages on the fly.

TweetDeck (www.tweetdeck.com) is a downloadable Twitter client. It runs in AdobeAir and has a beautiful, multi-column look. It's perfect for power tweeters, but it will also help you make sense of Twitter if you're floundering in the tweetstream. Set up columns containing your own tweetstream, mentions and direct messages, or use searches to track topics. If you have more than one Twitter account — perhaps one for work plus a personal one — TweetDeck makes it easy to follow and Tweet to both of them concurrently. It'll even feed your tweetstream directly into Facebook and let you track your friends' Facebook status updates and photos.

Not sure about Twitter? Take a peek with Seesmic Look (<http://seesmic.com>). It lets you eavesdrop on some of the most interesting tweetstreams available and you don't even need a Twitter account to use it. This downloadable app, which works on XP and Vista, but works best on Windows 7, displays tweets from the current hot topics in a luscious, luminous interface. Tweets bubble up from the depths to become visible. Switch from Trends to Channels of content from publishers like *Life* or *The Huffington Post*, or dig down through the categories in Interests. If you have a Twitter account, Seesmic Look offers a lot more. Sign in to see your own tweetstream, to check out what your friends are saying, or to monitor your Twitter lists.

Distributor

_ MISCELLANEOUS FREEBIES

★ **7-Zip** (www.7-zip.org). Recent versions of Windows have built-in support for ZIP compression, but you need a dedicated tool to handle other popular compression formats such as RAR, TAR and GZIP. 7-Zip provides support for a multiplicity of compression formats and adds its own ultra-compressed 7Z format to the mix. It's very easy to use and integrates nicely with the Windows shell, so you can right-click a file or folder and zip it up with a click.

★ **Aardvark** (<http://vark.com>). Want to know something? Why not ask your friends, or your acquaintances, or someone they know? Aardvark takes your questions and puts them out into your social network, delivering the answers via instant message. Every user fills out a profile, so Aardvark knows people's areas of expertise and tries to feed questions to the people most likely to have an answer. You can also follow conversations between others on the Aardvark site.

★ **PortableApps.com** (<http://portableapps.com>). If you're on the move, PortableApps.com lets you whack a bunch of your favourite

apps on a memory stick and take them with you, complete with your own settings. You can also pack your bookmarks and email. At the other end, plug in your memory stick and start using your own apps on whatever Windows computer is available to you. You don't install the apps, so there's no problems with compatibility and you leave no data behind. You can also grab the PortableApps.com Suite, which comes with a useful array of freeware programs, or pick and choose your own set of apps from almost a hundred available programs.

★ **Notepad++** (<http://notepad-plus.sourceforge.net>). Notepad++ is a powerful text editor. Designed for programmers, you can also use it to replace the far more limited Windows Notepad. It's compact and fast, but can handle large files with ease. It provides syntax highlighting and folding, including user-defined options, and it lets you launch your code directly from the editor, work on multiple files simultaneously, or view and

edit in two different places within a single document at the same time.

★ **Read It Later** (<http://readitlaterlist.com>). There's too much to read and you already have way too many sites bookmarked. Read It Later lets you keep a list of must-read articles tucked away in a corner of Firefox. Whenever you have a moment to spare, pop open your list, click a link and start reading. Or, if you'd prefer, grab a copy of those pages so you can read them when you're offline. Read It Later also comes as an iPhone app and you can sync your computer and iPhone lists. Or log in to Read It Later online from any computer and do your reading from there.

★ **Media codecs**. Have you tried watching a downloaded video and don't have the right codec to view it? Grab MediaCoder (www.mediacoderhq.com), ffdshow tryouts (<http://ffdshow-tryout.sourceforge.net>) and Haali Media Splitter (<http://haali.ru/mkv>) and you'll have all your bases covered.

Use the options to restrict your searches to particular types of content, such as photos, videos or comments on blog posts. Use the Share link to let others know about a search result via Twitter, Facebook, Mixx, Reddit, Delicious or StumbleUpon.

★ **Cuil** (www.cuil.com). Although Cuil's developers claim they search three times as many sites as Google and 10 times as many as Microsoft, they're not interested in serving you millions of search results. Instead, they try to find the very best results and then they dig deeper into them. Cuil analyses site content and inter-relationships. The results are served up in something akin to magazine format, with a lead article followed by additional articles, complete with page summaries and images. Down the right-hand side are categories pertaining to your search. So, a search for **time management practices** produces categories such as management, personal development, motivation, self-help writers and so on.

★ **Everything** (www.voidtools.com). Microsoft has gradually been improving its built-in Windows search, but even in Windows 7 it still leaves much to be desired. A tool like Everything fits very well side by side with Windows' own search. Everything lets you search for files and folders by name. It makes no attempt to index the contents of files, but it does index every single file and folder on your computer. It builds its index in a matter of seconds and it responds to your search queries almost the instant you press the keys. If you know any part of a file's name, Everything is the best tool for tracking it down quickly.

★ **PicFog** (<http://picfog.com>). PicFog is a real-time image search for Twitter. It searches for picture links in tweets and displays the results in a grid of thumbnails. Click a thumbnail to see the full-size image and its details. PicFog can search by topic, Twitter user or location, with popular retweeted images moving to the top of the thumbnail grid. You can review the results as a slideshow or watch a real-time flow of all the images being tweeted. There's no filtering of results, though.

★ **WolframAlpha** (www.wolframalpha.com). WolframAlpha launched amid much fanfare. Since that launch, this knowledge engine has been enlarging its huge store of data and refining its ability to understand complex queries. WolframAlpha excels at answering mathematical and physical questions, but it's also surprisingly adept at linguistics, history and even music. If you're wondering what to ask it, check out the gallery of examples. Perhaps the best thing about WolframAlpha is that all its data is curated, which makes it a welcome counterpoint to the not-always-reliable knowledge of the masses you'll find on sites like Wikipedia.

_ WEB DEVELOPMENT & BLOGGING

★ **Drupal** (<http://drupal.org>). If you need to build a web site that's highly flexible and can incorporate anything from a blog to forums and ecommerce, Drupal has you covered. It has quite a learning curve, but in the long run it makes light work of many highly complex tasks. Because it's open source, it has a huge community of developers creating themes

and plug-ins (known as modules), and a large network of support resources.

★ **Posterous** (<http://posterous.com>). With Posterous, you can create a blog by email. There's no need to sign up; just email your post's text plus photos, MP3s or video to post@posterous.com. You'll get a message back giving you your new blog site: yourname.posterous.com. It's deliciously simple yet surprisingly stuffed with features. Posterous lets you pick a theme or create your own. It provides email subscriptions for your blog; group blogging; blog comments; Google Analytics to track visitor stats; and interaction with Twitter, Facebook, Tumblr and other social networking sites. Send a single photo from your phone or your computer and Posterous resizes it sensibly; send a bunch of photos and Posterous automatically creates a photo gallery. If you've never blogged before, Posterous is the place to start.

★ **WordPress** (<http://wordpress.org>). If you've butted your head against the constraints in Blogger, move up to a serious blogging tool. WordPress lets you build your own blog and host it on your own web site. (There's also WordPress.com, which provides a hosted blogging service akin to Blogger.) It provides a framework for building and administering your site, while an enthusiastic mob of open-source developers produces a stream of add-ons and themes you can use to add features and spiff things up. As with Drupal, there's a learning curve, but the payoff is huge. Although WordPress is primarily designed around blogging, you can use it to create any type of web site. ☺

UserOS Ultra 9.10 to the rescue

Darren Yates shows off *PC User's* latest Linux-based operating system and its ability to work as a rescue disc.

Back in March 2008, we introduced our first home-grown Linux-based operating system. UserOS Ultra 7.10 became one of our biggest hits of the year and marked the first time anywhere in the world a computer magazine had put together its own operating system for its readers.

This month, we're releasing the second version of the UserOS Ultra operating system in UserOS Ultra 9.10. We've kept all of the major features that made Ultra 7.10 so popular and we've managed to add a couple of nice extras to create a highly featured yet lean and fast Linux operating system that's at home on new hardware or old.

WHAT'S INSIDE?

UserOS Ultra 9.10 is based on the basic Ubuntu operating system core nuts and bolts, although it has lots of extras and changes you won't find in Ubuntu or its once-lean cousin Xubuntu. These days, Xubuntu is almost the same size as Ubuntu, weighing in at over 650MB, while Ubuntu is 700MB.

We've built UserOS to carry lots of features, but unlike Ubuntu or Xubuntu, it's still small enough to install on a 512MB USB flash drive.

One of the things that made UserOS Ultra

7.10 so popular was its lightweight footprint, which made it lean and agile. Ultra 9.10 uses the Xfce desktop environment, which gives you a clean interface that's fast enough to run on older hardware. It'll also happily run in as little as 192MB of memory.

As for built-in applications, we've also chosen lightweight yet feature-rich versions — that means you won't find OpenOffice.org here, but you'll find lean alternatives such as AbiWord for word processing and Gnumeric for spreadsheets, both excellent apps that open, read, write and save Microsoft-compatible files.

PVR CAPABILITIES

As usual, we've focused on multimedia apps with UserOS, with the new feature this time being Me TV. With your own TV tuner card, Me TV can turn your PC into a personal video recorder (PVR). We incorporated this app into our UserOS Extreme 9.04 operating system (in the October 2009 issue) and we were so impressed with its function — and its small install size — we thought it the perfect fit here.

We've also included tools for video editing, iPod management, music playback, DVD playback and lots of audio/video codecs — basically, just about everything to get your multimedia playing.

There are lots of behind-the-scenes features, too, such as hardware driver updates, system software updates, firewall and print capabilities. While you'll find some of these features inside Xubuntu 9.10, what we've done is kept the basics we liked, added extra features we really liked and dumped all the stuff we didn't. In the end, we've created an operating system that's around 25% smaller than Xubuntu.

If you've never tried Linux before, UserOS Ultra 9.10 gives you the perfect excuse to give it a go — you can use it as a full-blown operating system, even on an older PC, or you can keep it handy as a rescue disc.

On the cover DVD

You'll find a copy of *PC User's* exclusive UserOS Ultra 9.10 operating system on this month's cover disc, as well as our Linux USB Installer for Windows. And don't forget to watch Darren's video tutorial on how to install the operating system. UserOS Ultra 9.10 is freeware, but comes with no warranty whatsoever. While it has been tested extensively, you use it at your own risk.

UserOS's preinstalled applications

Multimedia

| | |

| OS update manager | — |

The UserOS Ultra 9.10 desktop.

MSI Wind owners beware

Changes to the power management setup of Ubuntu 9.10 seem to be causing problems with MSI Wind U100-series notebooks. Screen brightness changes cause the backlight to go haywire, virtually locking up the notebook while it runs around an endless software loop trying to set the brightness level. Unfortunately, we've not been able to fix this in Ultra 9.10, so Wind U100 users will need to give this a miss.

Create a rescue disc on CD or USB

UserOS Ultra 9.10 is ideal to use as a rescue disc. All you need to do is copy the ISO image from this month's cover disc to your PC's hard drive and then burn it to a CD.

However, you can't just do a normal data disc burn, you need to use software that will perform an ISO burn, so that the contents of the ISO image are extracted and recreated on the disc. If you don't have suitable software, you can download ImgBurn from www.imgburn.com. All you need to do is choose the 'Write image file to disc' option, click the tiny Browse button and select the ISO image. Make sure you load in a blank CD-R and then click the 'Burn disc' button. Once the process is finished, you'll have a bootable UserOS Ultra 9.10 disc with which you can boot up almost any PC.

To use the disc, you'll need to make sure that your PC or notebook is set to boot from the optical drive first. You may need to consult the manual for your notebook or PC's

motherboard for details on how to adjust these BIOS settings. After that, start the PC, load in the CD-R and it should boot up with the UserOS Ultra 9.10 interface.

CREATING A RESCUE STICK

If your PC or notebook doesn't have an optical drive, don't worry—you can also create a bootable USB rescue stick that will virtually do the same thing. All you need is our exclusive Linux USB Installer software and the UserOS ISO image from the cover disc, plus a USB flash drive that's at least 512MB in capacity. A larger drive is fine, but you won't be able to use any remaining capacity, so you might as well limit it to a 1GB or 2GB stick at most, whichever you have spare.

First up, plug in the USB flash drive and make sure it's empty. Formatting it as a FAT32 file system would be ideal,

New UserOS column

We can't possibly do UserOS Ultra 9.10 justice in a small feature, so from next month, our monthly Linux column will look at our exclusive UserOS operating systems. We'll show you how to get the most out of them, as well as how to modify them yourself to get them to do what you want.

just make sure you copy any important files from it first. Next, start up the Linux USB Installer software, select the flash drive, choose the location of the UserOS ISO image and click the Install button. The software will then make your flash drive bootable and extract the contents of the ISO image onto the drive. Once it's complete, you'll have a bootable flash rescue stick.

To use it, make sure the BIOS on your PC or notebook is set to boot from the flash drive first. Again, you may need to consult your motherboard or notebook's manual for instructions on changing the BIOS settings. Once that's done, plug in the flash drive, boot your PC and the UserOS Ultra 9.10 boot menu should appear. Use the 'Try out UserOS Ultra' mode to try it without making changes to an existing PC.

stepbystep CREATE A USEROS RESCUE CD

1 Copy the UserOS ISO image from the cover disc to your PC's hard drive. Install and launch ImgBurn. Click on the 'Write image file to disc' button.

Click on the small Browse button and locate the ISO image you copied to your PC. Load a blank CD-R and click the 'Burn disc' button on the lower-left of the ImgBurn window. When the burn is completed, you'll have a bootable UserOS rescue CD.

stepbystep CREATE A USB FLASH RESCUE STICK

1 Plug in your USB flash drive (512MB minimum), copy any important files off it onto your PC's hard drive and then format the USB drive.

Copy the UserOS Ultra 9.10 ISO image off the cover disc to your hard drive. Install PC User's Linux USB Installer. If using Windows Vista or 7, right-click the Linux USB Installer launch icon and select 'Run as Administrator'. Choose the location of the ISO image, select the drive from the list and click the Install button. When installation is complete, wait for the USB drive's LED to stop flashing. The flash drive should then be a bootable rescue stick.

Rescue files from a broken Windows PC

You can picture it: you finish the assignment 11pm the night before it's due, you go to the computer in the morning, boot it up and it won't start Windows. While the temptation at this point is to break the glass and hit the panic button, if you have a UserOS rescue CD or rescue stick and a spare USB flash drive, all might not be lost.

Hard drive failures can come in different degrees of severity — if your PC won't boot into Windows, you might still be able to access and extract files that are located on the hard drive.

One of the key features of UserOS Ultra 9.10 is its ability to boot from a CD or USB flash drive. Another is the PCMan File

Manager app installed in UserOS. What's cool about this app is that it allows you to look inside and access files on a PC's hard drive. If you plug in a spare USB flash drive, you can use PCMan File Manager to copy files off the PC's hard drive and onto that spare flash drive. Once that's done, you can take the flash drive to another computer and continue working.

— FIRST STEPS FIRST

If the PC starts up, even though it won't load Windows, you've still got a chance. What you need to do is head into the BIOS settings and adjust them so that the PC will first boot from your preferred device

— either a CD or a USB flash drive. You'll probably need to consult your PC motherboard or notebook's manual for details on how to do this. (Quite often, getting into the BIOS requires you pressing either the Delete or F12 keys when the PC first boots up, but this will depend on the motherboard or notebook.)

Make sure you plug in your USB rescue stick first so that the BIOS will recognise it — some motherboards need to see the drive to make it an option to boot from. If you're going to boot from the CD drive instead, now's a good time to load the rescue CD you have created into the optical drive.

stepbystep SAVE FILES WITH A USEROS RESCUE CD

1

Start the computer. If it runs, get into the BIOS and make changes so that the optical drive is the first boot device (consult your PC motherboard or notebook manual for details). Save the changes, load your rescue CD and reboot.

2

When the PC boots, you should see the main menu. Select 'Try out UserOS Ultra 9.10'. After a minute or so, you should see the UserOS Ultra 9.10 desktop. Launch the PCMan File Manager and check to see if the PC's hard drive appears (it'll appear as an entry, such as '80.0GB Volume'). If it doesn't appear, it's likely there's a more serious fault that may need more specialised treatment.

3

If the entry appears, click on it to list its folders. Locate the files/folder you're after. If they're there, plug in a USB flash drive or hard drive and copy the files/folders you're after.

4

When done, right-click the USB drive and select 'Unmount File System'. Wait until the drive name changes and the flash drive indicator LED stops flashing, then remove the drive and plug it into another PC.

5

Copy the files off the USB drive onto the new PC's hard drive and you should be able to continue working.

REBOOT

Once those settings have been changed, you'll need to save them and reboot. Again, most PCs and notebooks use the F10 key to make this happen. If all is correct, you should see your PC boot from the appropriate drive and the UserOS menu appear. Choose 'Try out UserOS Ultra 9.10'. This is the default option, which will automatically kick in within 30 seconds of booting up.

Once you've done that, the UserOS desktop should appear within a minute or so. In order to see the contents of the PC's hard drive, you must use the PCMan File Manager, as it's the only one that can view the hard drive. The Thunar file manager can't see host hard drives if it hasn't booted off to. To launch PCMan, go to Applications → Accessories → 'PCMan File Manager'.

You should find PCMan pretty similar to Windows Explorer, with the drive panel on the left, and folders and files on the right. If the system's hard drive is working, you should see it listed in the drive panel as 'XX.XGB Volume', where XX.X is the numerical capacity of the drive; for example, '82.2GB Volume'. Click on that volume and if the drive still works, it should start listing its folders in the folder panel. If you plug in a spare USB flash drive, it should appear in the drive panel as 'Removable Volume'.

SOFTLY, SOFTLY

At this point, you want to tread lightly. First, any changes to files here could potentially damage the Windows installation further; for example, if you get careless and start deleting files from C:\Windows. Secondly, if the drive has failed to start Windows, it might be due to a file corruption issue with Windows, but it could also be a more serious physical problem with the drive that's only likely to get worse.

The important thing is to go straight to the folders where your important files are located and start copying them to the USB flash drive. Once you get that data safely onto the drive, take it to another PC and check that you can open those files and continue working on them as before. Depending on the files, it might be safer to copy the complete work folder you were using, just so you grab any related files as well.

TOP TIP

Use FAT32 or NTFS

When you're about to use a spare USB flash drive to copy files from a broken system, make sure the drive has been preformatted using FAT32 or, if need be, NTFS. UserOS Ultra 9.10 can read either Windows file system, but Windows can't generally read Linux file systems. In order to be able to read those copied files, make sure you start with a FAT32 or NTFS-formatted flash drive.

Install UserOS Ultra 9.10 onto a PC

While UserOS Ultra 9.10 is ideal for use as a rescue CD or rescue stick, we've also designed it to be a fast, lean, full-time operating system that you can use on a range of hardware, from the latest quad-core system to an older Pentium PC.

The first step is to follow the instructions under 'Create a rescue disc on CD or USB' on page 43 and create the install media you wish to use. Once you've done that, the next thing is to make sure your PC or notebook will boot up from that media. For this you may need to consult the PC motherboard or notebook manual for the correct BIOS settings.

After that, it's a case of booting up the PC or notebook and selecting 'Install UserOS

Ultra 9.10' from the UserOS Ultra boot menu. To start the installation, click on the Install icon on the desktop. From this point on, the installation process is the same regardless of whether you use a CD or USB stick. UserOS Ultra 9.10 needs a minimum of 192MB of memory and it should work well on any system with at least a Pentium III or Athlon processor. The ISO image is just over 500MB, although it'll need around 1.5GB when installed, so we recommend a minimum hard drive capacity of 15GB to make a real go of the operating system. We also recommend you use the CD option for older PCs, as they're less likely to understand how to boot up from a USB device.

stepbystep INSTALL USEROS ULTRA 9.10

1

Create an installer USB stick or CD by following the instructions on page 43.

Boot up the PC and when you see the launch menu, select 'Install UserOS Ultra 9.10'. From there, follow the prompts.

3

2

Set your PC to boot from your chosen install device (CD or USB). (Consult your manual for details on how to do this.) If you're using a USB flash drive, you may need to plug it in first before making any BIOS boot priority adjustments.

4

When you get to the hard drive partitioning stage, choose whether to perform a dual-boot install (which maintains your PC's previous operating system) or a clean full install (which erases all data on the drive). We recommend the second option after first copying off any important data.

Best-value broadband plans

Alex Kidman reveals the best deals in the broadband market.

**PC USER
BEST
BUY**

aaNet's bundled DSL plan under \$50 is fast and offers a generous data limit.

Exetel's naked DSL plan under \$60 delivers on all fronts: it's fast, has a 130GB quota and great call costs.

iiNet's Home7 ADSL2+ plan offers a huge 180GB of downloads for \$129.95 when bundled with a phone service.

Internode's Easy Broadband plan is such good value, it received the nod in two categories. Plus, its Home-Extreme-200 unbundled plan was a winner in the brand-name players.

With the National Broadband Network looming, it's fair to expect that competition will hot up in the broadband marketplace. That's already the case in the wireless space, but what about plain old ADSL? PC User's annual check on broadband pricing looked into the state of broadband plans in 2010.

_ WHAT WE LOOKED FOR

We assessed broadband plans as advertised by vendors across six categories. Pricing in tiers (\$30/\$50/\$60/\$100 per month), a look into the big players' biggest plans and a check into the best-value naked DSL plans under \$60. Picking the best plans across every category is tricky because different users have different needs. We concentrated on speed minimums at each price point and then on bandwidth allotment. Depending on both network conditions and distance from exchanges, you may get wildly different speeds, but the data allowance offered should always be available to you. The only notable variance is those ISPs that insist on calling their plans 'zero-month' plans. You're not going to use any ISP for a zero sum period. We've noted such plans as having one-month contracts, as that's what they are in a realistic sense. All plans are as per vendor web sites on February 3, 2010.

_ BROADBAND UNDER \$30

256Kbps barely counts as broadband, an observation we've made for many years now. It's not fast enough for gaming, not fast enough for VoIP and can be painful even for basic browsing. It does have the advantage of being always on, though, and if your budget is seriously constrained, then MOTIV's 8GB offering is fairly good. Lower-cost plans are still where bundling in your phone makes a lot of sense, as the same basic price can up that 8GB top to 20GB, courtesy of Netspace's 256 20 Anytime plan.

Best-value unbundled: MOTIV Communications 256kbps 8GB

Best-value bundled: Netspace 256 20 Anytime

What we looked for: 256/64Kbps or better, Rapid/Single Service Transfer, at least 200MB/month, uploads not counted, cheap/no excess usage fee for data, plans available nationally.

_ BROADBAND UNDER \$50

512Kbps with its VoIP and online video possibilities, and we were surprised at how fierce competition was at the middle of the ISP pool. Internode's Easy Broadband offers a huge 50GB allowance and either a very fast 1,500/256kbps connection or ADSL2+ if you're within signal distance of an Internode DSLAM. aaNet's ADSL2-Plan-3 plan is just as fast and is available either bundled or unbundled under our price ceiling, with the tempting carrot that only half of your off-peak downloads count towards your monthly quota.

Best-value unbundled: Internode Easy Broadband

Best-value bundled: aaNet ADSL2-Plan-4

What we looked for: 512/128Kbps or better, Rapid Transfer, at least 5GB/month, uploads not counted, no excess usage fees (or optional) for data, available nationally.

_ BROADBAND UNDER \$60

You might be a touch confused as to how one plan can win both the under \$50 and under \$60 categories, but it's actually pretty simple. There's just not that much competition that beats Internode's offering at either price point, especially if you're close enough to an ADSL2+ DSLAM. This is also the tipping point for bundled deals because while Westnet's bundled offering offers more data overall, it's only marginally so. Many bundled deals are good news for the ISPs, but not exactly compelling for consumers.

Buyer's checklist

- * **Shaped or excess charges?** We searched for plans that used shaping — dropping the speeds to effective dialup speeds once bandwidth allocations were met — as a budget measure, but those who need more data from time to time may prefer plans that let you bolt on additional data packs. Just be sure you know how much data will cost you, as some ISPs are rather heavy-handed when it comes to excess data charges.
- * **Contract length.** Some plans

operate on a month-by-month basis, while others lock you in to longer terms. There can be security in a longer contract if plan fees rise, but at the same time, the 24-month contracts that some plans require are arguably a bit excessive for consumers to bear. ISPs naturally love them.

* **What's in the fine print?** What will your ISP charge you for early termination? For moving addresses mid-contract, even if you're not

cancelling? How much notice do they have to give you before changing contract terms? How much does a printed mailed invoice cost? Are there internet services that they speed limit or outright block? All of this detail should be present in the terms and conditions document every ISP offers, and it's well worth perusing this document before signing on the dotted line.

PC USER
BEST
BUY

Best-value unbundled: Internode Easy Broadband

Best-value bundled: Westnet Broadband 1 Option 4 (bundled)

What we looked for: 1.5MB/s or better, at least 20GB/month, no excess usage fees (or optional) for data, plans available nationally.

BROADBAND UNDER \$100

If you've got the cash to spend big on fast ADSL2+ with plenty of bandwidth, there's no shortage of ISPs ready to take your money. Local's Fast & Furious plans offer plenty of bandwidth for those who need it in the unbundled space. In the bundled market, it's a lot murkier. The iPrimus Big Kahuna plan might look like an obvious winner with a meaty 200GB of total data allowance, but most of that is tied up in a short off-peak period and it's saddled with a mandatory 24-month contract, which is a very long time in broadband. iSage's bundled Iceberg 60GB is a little more contract-friendly, but not quite as data-rich and naturally enough, at this price point there's also a lot of competition from naked DSL products.

Best brand-name plan: Local's Australis Fast & Furious 50/50

Best-value bundled: iSage Iceberg 60GB (bundled) or iPrimus ADSL2+ Big Kahuna (bundled)

What we looked for: 8MB/s or better, Rapid Transfer (where feasible), at least 30GB/month, uploads not counted, no excess usage fees (or optional), ADSL plans available nationally.

BRAND-NAME PLAYERS

We have a tie in our best and biggest category. Technically, Internode's offering gives you more data on a monthly basis to play with and no peak/off-peak restrictions. It's also bundle-free, a rarity in the high-cost brand-name space. In return for bundling (and only slightly less data overall), iiNet's similar plan is a full \$50 per month cheaper.

Best brand-name plan: Internode Home-Extreme-200 or iiNet Home7

What we looked for: The biggest, fastest, best plans as offered by the brand-name ISPs. If money was no object on a consumer plan and you were near enough to the exchange, these would be the plans to consider.

NAKED DSL UNDER \$60

OK, it's got the strangest name of any broadband plan we looked at, but for \$60 including line rental, Exetel's plan delivers on all fronts. It's fast, you get a tasty 130GB of total data allowance, great call costs and a very competitive 50c/GB excess data

The Big Kahuna plan from iPrimus offers a massive 200GB of data downloads, although most of that is off-peak only.

PC USER
BEST
BUY

As far as bundled plans go, iSage's Iceberg 60GB plan is good value, with a short contract term.

PC USER
BEST
BUY

Local's Australis is an obvious winner under \$100, with plenty of bandwidth and a short contract term.

Tech terms

ADSL (Asymmetric Digital Subscriber Line). The base technology that delivers broadband via telephone lines. The older standard, usually just dubbed ADSL, delivers speeds of up to a theoretical 8,000Kbps, while ADSL2+ can deliver up to 24,000Kbps. Whether you can get ADSL or ADSL2+ depends on your proximity to the correct type of phone exchange.

Naked DSL. A type of ADSL2+ that strips out the standard phone line. The advantage here is that you don't have

to pay a line rental charge for a naked DSL service, although you would need to swap normal phone service for a broadband-based VoIP service, or rely solely on mobile phone services.

Rapid Transfer/Single Service Transfer. ISPs that offer Rapid Transfer or Single Service Transfer will typically let you swap from a compatible ISP in a matter of days (Rapid) or hours (Single Service), and often for a much lower setup fee than a new service requires.

It's hard to beat MOTIV's 8GB unbundled plan for under \$30.

PC USER
BEST
BUY

option to boot. The fly in the ointment may well be whether you can get them, as naked DSL is the one area where we couldn't find enough plans available for a true nation-wide search.

Best-value naked DSL: Exetel NF/23NoTel

What we looked for: Our entry-level price point was \$30 and most line rentals hover around that. Naked DSL is meant to be all about value, so we wanted to see if the two amounts combined would equal better value than the standard entry-level plans.

Westnet's bundled option under \$60 combines a generous 60GB download limit with a phone service.

Simply by bundling your home phone, Netspace's 256 20 Anytime plan ups your data to 20GB for less than \$30.

Best VoIP plans

Alex Kidman takes a closer look at VoIP providers to see which plans are worth making the switch.

Naked DSL has exploded over the past year, so most ISPs now have a VoIP-centred, line rental-free option available for customers. We've even seen a few pure VoIP players dip into the naked DSL market. But where does that leave pure VoIP players?

Surprisingly, it actually seems to have left them not doing a whole lot of anything. Compared to the plans on offer this time

12 months ago, there's not much change. In fact, for most of the VoIP companies we've surveyed in this feature, there's been no change at all.

You might expect that prices have dipped over time, but in most cases that's not occurred at all, with some call rates and plans going up marginally. There's clearly a market for VoIP for those who

don't want to go down the full naked DSL route, but it seems as though pricing and competition has largely bottomed out. You can still make significant savings over PSTN phone line plans if you haven't tried VoIP previously, but existing VoIP customers who are happy with their provider don't have much impetus to change providers, at least on a cost basis.

Buyer's checklist

* Do I have the right hardware?

Utilising VoIP will either involve a PC and headphones/microphone (if you go the softphone route), or a device that looks like a regular-style handset. Many VoIP providers will sell you a cheap handset, but they're usually locked to that provider.

* Are my calling destinations covered?

Our East Timor check highlights this nicely. If the country you call most often isn't covered or is costly with one provider, check another. Prices vary widely and so do our calling needs, so the value varies.

* **What's in the fine print?** Some calling plans offer 'unlimited' calls, but are they really? Check the contract to see how much you can actually use VoIP from a given provider to make sure you'll get what you expect.

* **Do I have enough bandwidth?** VoIP may seem free, but each call uses up a portion of your internet data allowance from your ISP. Figures vary depending on the codec used (the algorithm that encodes and decodes voice into digital data), but if you plan on using roughly 1MB for every couple of minutes of calling time, you'll avoid bill or shaping shock. Likewise, most carriers list 512/128Kbps as a bare minimum speed for VoIP, so if you're on a slower plan or can't reliably get those kinds of speeds, VoIP might not be the best investment.

_HOW WE TESTED

We evaluated key plans from a number of Australian VoIP providers. These are based on their advertised prices and plans as of January 28, 2010. Prices and plans may vary over time, so be sure to check each vendor's web site for their latest deals and especially for any new conditions they may place on accounts.

Some VoIP providers offer zero-cost plans, although it's less common than it was 12 months ago. These have no ongoing subscription component and generally work on a prepaid basis familiar to many mobile phone users. Mid-range plans may introduce a monthly fee, usually in return for either cheaper overall call costs or some kind of call allocation. Finally, for those whose ears are constantly glued to the telephone — when they're not busy worrying about their phone bills, that is —

we've included heavy-use plans.

As always, we've only assessed the plans as presented by each VoIP carrier. These are not comprehensive quality tests on each provider, something that would be highly subjective depending on the call conditions at the time of each test.

We've looked at local call costs — some providers consider all of Australia to be local, but not all do — as well as calls to Australian mobiles and three international destinations. The UK is a very common and usually cheap calling destination, while Fiji sits in a mid-range point. Finally, the world's newest nation, East Timor, was selected as a good choice for checking the carriers' more costly call destinations. One surprising result here was that a couple of VoIP providers still don't list East Timor as a calling destination at all.

Tech terms

DID (Direct Inward Dialling). Essentially, a service by which your VoIP connection is given a real phone number that any phone can call into. Aside from being contactable, the other benefit of having a DID (or several) is that callers can ring you at local call rates if the DID is in their local zone, even if you're not.

Naked DSL. A method of broadband provision that strips out the PSTN signal from your phone line. Most naked DSL services come with a VoIP plan bundled to make up for the loss of PSTN.

PSTN (Public Switched Telephone Network). The ordinary phone

lines. VoIP calls (except between VoIP clients) will start on the internet, but at some point jump onto the PSTN network to end up at a real-world phone.

QoS (Quality of Service). A feature in many home routers that places priority on VoIP (or other) types of internet data to help ensure clear phone calls.

Softphone. A software-based phone client. Skype is an example of a softphone.

VoIP (Voice over Internet Protocol). Using your internet connection to make cheap phone calls.

This iiNet ADSL router offers VoIP connectivity straight out of the box.

PENNY VOIP

PennyVoIP converts voices into a digital signal that can be sent over the Internet. It's cheap and in some cases completely free!

- You don't need separate data or voice networks to get connected VoIP will route your calls over existing data networks.

- VoIP gives advanced features: conferencing, full interactive Voice Response, call forwarding, automatic redial, caller ID, etc.
- Just connect to the Internet and call from anywhere in the world.
- Add extra telephone lines to your office or home by using a single broadband connection.

Never miss a call with voicecall - it's included with your subscription.

Discounted online number
Get up to 50% off an online number - friends and family can call from their phones.

_ZERO-COST PLANS

There was a time when every VoIP carrier had a zero monthly cost plan. Those days are over it seems, with only PennyTel's excellent-value Free Access Unlimited plan truly standing out, with cheap local and international call rates for no money up front. Highly commended honours are split: FaktorTel's local call costs are lower than MyNetFone's, but FaktorTel is one of only two VoIP carriers that didn't list a price for East Timor calls at all.

Best-value plan: PennyTel Free Access Unlimited

Highly commended: FaktorTel \$0 Per Month and MyNetFone SuperSaver

_MID-RANGE PLANS

If you wanted proof that there's not much change in the pure VoIP space, the mid-range plans provide it. While both the PennyTel Freedom and MyNetFone GlobalSaver offer good value compared to PSTN phone rates, they're pretty much exactly the same plans as were offered a year ago. There's little competition, just a choice between the 80 free calls on PennyTel's plan versus the 100 free calls that MyNetFone offers.

Best-value plan: PennyTel Freedom

Highly commended: MyNetFone GlobalSaver

_HEAVY-USAGE PLANS

Our award winner last year takes the crown again this year. Technically, SkypeOut is the one VoIP carrier whose rates have become cheaper in the last 12 months, but that's purely down to Skype charging in Euros and the exchange rate getting better, rather than any particular market decision on Skype's

part. Still, even if you plan to talk for more than 10,000 minutes per month or need to call East Timor, it's good value. PennyTel's cheap rates put it in the highly commended category, combined with its offering of 150 free calls or 500 calling minutes.

Best-value plan: SkypeOut Unlimited World

Highly commended: PennyTel Crazy Talk

For heavy VoIP users, the value of Skype's World Unlimited monthly plan is hard to beat.

_PLANS BUNDLED WITH BROADBAND

Bundling with your broadband provider still offers decent value, although those near enough to the relevant infrastructure should also check out naked DSL plans. Exetel's TL-B offering combines competitive pricing with a fair whack of potential data to use it with; however, we'd suggest keeping an eye on your overall usage, given that excess data usage is charged for. TPG's Ultimate bundle works well for those who can't (or won't) go with naked DSL.

Best-value plan: Exetel TL-B

Highly commended: TPG Ultimate 1500/25GB with VoIP

Our pick for VoIP bundled with broadband is Exetel's value-for-money and data-filled TL-B plan.

BEST-VALUE UNBUNDLED VoIP PLANS: HOW THEY COMPARE

* Nexus plans are subject to our Acceptable Use Policy (AUP). 39c flagfall applies for all non-local and non-national calls. Timed calls are billed in 30 second increments. After the cap time has passed, you will be charged at the nominated rate as detailed on our website. Minimum total cost over 12 months \$599.40 (calls which are not included are additional). Nexus plans are only available to Residential customers. Early termination fees apply. Direct Debit or Credit Card only. ^ Peak 2GB (9am-2am EST), Off-peak 6GB (2am-9am EST). Includes \$9.95 VoIP Pack. Other calls are additional. Minimum total cost over 1 month \$278.90 (includes set-up fee). Early termination fees apply. Direct Debit or Credit Card only. # \$15 modem delivery fee applies. Coverage not available in all areas. Data usage includes both downloads and uploads. Excess usage over the data limit is 14c/MB. 1GB minimum total cost over 24 months \$373.80. 2GB minimum total cost over 24 months \$613.80. 6GB minimum total cost over 24 months \$1333.80. Early termination fees apply. Direct Debit or Credit Card only.

Broadband on the go

David Flynn tests mobile broadband plans for speed, value and reliability.

Tech terms

3G. This refers to the third-generation digital mobile phone technology that enables high-speed data. Most 3G networks use the 2,100MHz band. However, 3G technology can also be used on other bands, such as the 850MHz of Telstra's Next G network and the 900MHz regional networks of Optus and Vodafone.

HSDPA (High-Speed Downlink Packet Access). The technology used on 3G networks to boost data throughput to true broadband-grade speeds. The most common current HSDPA standards are rated at 3.6Mbps (HSDPA 3.6) and 7.2Mbps (HSDPA 7.2) for downloads, although the real-world speeds are typically half to a third of those theoretical ceilings.

Latency. The time taken for a data packet to be sent to an online server and an acknowledgement received from that server. Low latency (less than 250ms) means a snappy response to surfing and watching online video. Higher latency causes video stuttering and makes VoIP unusable.

Mbps (megabits per second). High-speed ADSL services range from 1.5Mbps to 8Mbps, with up to 24Mbps for ADSL2+. 3G mobile broadband services commonly deliver between 1Mbps and 4Mbps.

Every year we conduct our annual mobile broadband tests seems like the best year yet for internet on the go and 2010 is no exception. It was expected that prices would fall and data allowances would increase, but Telstra has finally seen the light of day and made its Next G plans much more appealing. The growth of network resellers has further fuelled competition and choice.

Several mobile ISPs are now offering a choice between standard and high-speed USB modems to appeal to mainstream users and mobile mavens alike. The rollout of regional 900MHz 3G networks by Optus and Vodafone also brings mobile broadband within reach of more Australians.

For the sake of comparison, we conducted this year's tests in the same Sydney CBD and

North Sydney locations we used in 2009. Of course, the results will differ in suburbs and other cities.

Our pricing table samples the most appropriate mobile broadband plans for three typical usage levels, based on the four carriers and three of their resellers. Check each mobile ISP's web site for details of additional plans to suit your specific budget and data needs.

_ REVIEWS

TELSTRA BIGPOND

PHONE 13 76 63 / WEB www.bigpond.com

With an extraordinarily wide reach, consistently high speeds and the ability of its 850MHz signals to hammer into some areas where the 2,100MHz 3G band can't reach, Telstra's Next G network ticks all the tech boxes. Thankfully, 2010 sees Telstra tick the value box as well. Prices have been slashed, data limits boosted and the outrageous excess usage fees ditched in favour of a 64Kbps speed limit, although the option to buy data packs would be welcome. Next G mobile broadband plans

are still the most expensive on the market by an average 50%, but narrowing the price gap to its competitors makes it easier to justify paying a bit extra for the network's superior performance. Bundling discounts for Telstra landline and mobile services can lop an additional \$20 per month off your bill. The USB modems still carry a hefty upfront hit — \$299 for the BigPond Turbo modem and \$399 for the 8Mbps-rated BigPond Elite — but if you sign

a 24-month contract, you get a respective rebate of \$200 or \$300.

We noted a performance bump against 2009's testing, with 4Mbps in North Sydney and our Sydney cafe plus 2.8Mbps in the CBD office tests. We should point out that Optus matched these results, which indicates that for Sydney CBD use, its cheaper plans could be a better bet.

PC User says: Still the obvious choice for travellers and those who demand consistent speed and coverage.

Buyer's checklist

*** Fast or faster?** Optus and Telstra both offer a high-speed USB modem for an additional charge over the standard modem. Check that the network in your local area runs at the same speed — if you live in an area where the cell base stations haven't been upgraded, you may find no added benefit.

*** Are you covered?** Check that your home, office, local cafe strip or other areas you'll want to use your mobile broadband service fall within the network's coverage area. Ask if there's any way you can trial the service before committing to a contract.

*** No Torrents.** Because 3G mobile broadband services count uploads as well as downloads in their monthly data allocation, we suggest you avoid running peer-to-peer file-sharing applications like BitTorrent.

*** Avoid unnecessary downloads.** Unless you've got a high usage cap, leave downloads until you're at the office or home and running off your ADSL service. Disable the default to have Windows automatically download new updates. Change this to having the OS alert you when there are updates so you can download them over the office or home network.

Conserve your 3G data allowance by disabling Windows Automatic Updates.

OPTUS

PHONE 1300 300 937 / WEB www.optus.com.au

Compared to last year's tests, Optus is the big improver for 2010. A year ago, we noted that Optus had solid speeds in the Sydney CBD, but hammered the service for its high latency figure of 750ms, compared to 100ms for Telstra and an average of 200-300ms for Vodafone. Such high latency can make a mobile connection almost useless for everything from web browsing (due to jumbled page layouts with missing elements) and VoIP, to online video, which freezes as content is constantly buffered. Optus seems to have made good on its word to amp up

the network, which also suffered overcrowding from iPhone customers. This year, not only was latency down to an average of 100ms in the Sydney CBD, but speeds had also shot up: we clocked 4Mbps at a city cafe

that last year recorded 2.4Mbps, and 3.4Mbps in an office which in 2009 delivered a still decent 2.7Mbps. We're well aware that the Optus network is anecdotally considered a bit hit and miss. Our tests were only for a handful

of locations in the city CBD, so your results almost certainly will vary.

PC User says: Our Sydney CBD results put Optus back near the front of the mobile broadband pack.

VIRGIN MOBILE

PHONE 13 25 45 / WEB www.virginbroadband.com.au

Virgin Mobile is the best-known example of the trend towards Virtual Mobile Network Operators (VMNOs) that resell the services of a 3G network under their own branding and identity. In the case of Virgin Mobile, you're actually using the Optus network — you'll get the same performance on Virgin as you do with Optus. In this year's round of testing, that stands up pretty well for the Sydney CBD. But if you're on the same network, why would you choose Virgin over Optus? Virgin's plans are slightly cheaper on a month-by-month basis, unless you choose the Optus

\$99 upfront modem deal. Virgin offers its USB modems at \$5 per month in the \$24/1GB and \$34/2GB plans (the data costs are \$19 and \$29, respectively) and free on the \$34/5GB plan, which is clearly the pick of the bunch. However, Virgin runs a 24-month

contract, while Optus will set you free after a single year. Also noteworthy is Virgin's excess usage policy. Instead of a per-MB charge, your speed is cut to 128Kbps for the first 250MB over your limit; the account then becomes inactive until

the next billing cycle begins, unless you buy a data pack, which starts at \$15 for 500MB.

PC User says: Virgin's monthly prices are keener than those of its parent Optus, but with twice the lock-in period for your contract.

3

PHONE 13 16 83

WEB www.three.com.au

The biggest change for 3's mobile broadband service has been the introduction of national roaming onto Telstra's Next G network to offset 3's limited 3G coverage. 3 has the smallest footprint of any of the Australian mobile carriers, but outside this, customers can roam onto Telstra's high-speed Next G network. Each mobile broadband plan includes a nominal roaming allowance ranging from 2MB to 5MB, after which you're charged 50c per MB. You can disable 3G

roaming to avoid being hit by excess charges if you travel. 3 has upgraded its USB modems to work on Next G's 850MHz band, although because it doesn't like to mention its competitor/ally by name, the modems are branded as MEGA 3G and the extended

network coverage is called a 3G Roaming Zone. As with Vodafone, 3's performance matched up against our 2009 tests. We recorded a pedestrian 1.5Mbps in North Sydney, the same speed punching into an inner-city office and a nippy 2.5Mbps

at a CBD cafe. Despite the trend towards 12-month contracts, 3 insists that customers sign up for 24 months.

PC User says: *If you plan to stay within the footprint of 3's own 3G network, this is still the best bang for your buck.*

VODAFONE

PHONE 1300 650 410

WEB www.vodafone.com.au

Vodafone's pricing and performance remains pretty much on par with what we saw last year. The entry-level plan is the same \$25/1GB — \$20 for the data and \$5 for the modem — although this is available only on a 24-month contract. The meatier plans, which are also available on a 12-month contract, are \$30/3GB, \$40/6GB and \$50/7GB. The past year saw Vodafone flick the switch on its 900MHz regional 3G network to deliver mobile broadband to many towns outside the reach of its

primary 2,100MHz network. Its USB modems work on both bands, so business travellers and holiday-makers stand a better chance of remaining online once they head out of the big smoke. And if you're really keen, Vodafone offers

roaming data bundles so you can use mobile broadband overseas on your laptop: see <http://tinyurl.com/yb49lgt> for more details. The results of our tests in the Sydney CBD mirrored those of last year: 1.9Mbps in a city cafe, a less

impressive 1.4Mbps in North Sydney, and total failure to obtain a signal in a CBD office.

PC User says: *While Vodafone's pricing is keen, you should assess the coverage in your local area before signing on the dotted line.*

Mobile broadband resellers

When you're shopping for mobile broadband, don't overlook the many companies that resell an existing carrier's capacity under their own brand and with their own plans, modems and support staff.

Virgin Mobile is perhaps the best known of these, but it's far from the only one. Mobile phone specialist Crazy John's is a VMNO for Vodafone, for example.

Several ISPs resell 3G mobile broadband as a natural complement to their ADSL offerings. Internode and Exetel resell for Optus, and iiNet for 3. However, don't always assume a reseller will offer lower prices. For example, iiNet's plans are identical to those of 3. And Internode's \$15 NodeMobile Data Explorer plan includes just 500MB of data, which is half of what Optus offers for the same amount of money. The \$40/5GB NodeMobile Data Value plan is pretty much on par with the Optus \$35/4GB plan.

Both Internode and Optus charge \$99 up front for the USB modem, although Internode includes this if you commit to a 24-month contract.

A key difference is that Internode pipes its own highly-regarded

internet service over the Optus 3G network, rather than reselling the entire Optus internet service — in effect, all Internode does is use the Optus 3G network as a wireless replacement for Internode ADSL. This should boost back-end performance, but of course you're still at the whim of the wireless connection for actual signal strength and speed.

Internode also treats excess usage differently. While Optus charges 6c per MB, Internode simply turns off the tap until your account's next monthly rollover date unless you buy a block of additional data, which starts at \$10 for 250MB. These very different approaches will appeal to different users.

Exetel's plans are almost the same as Optus, for which it acts as a reseller, with the exception that there's no contract — it's a straightforward month-by-month deal.

The cheapest plan of another Optus reseller, iPrimus, costs twice as much as Optus — \$30 for 1GB against Optus's \$15. But \$40 gets you 6GB and a modem over a 24-month contract, compared to \$35 for 4GB from Optus.

Telstra's prepaid wireless broadband starter pack includes the option of the high-speed Turbo modem.

iPrism also throttles the connection back to almost useless dialup speeds once you exceed your monthly data allowance, although you can add extra data, starting at \$6 for 1GB.

The offerings from Crazy John's are a mixed bag. There's an entry-level \$15/1GB plan, which Vodafone lacks on the same 12-month contract basis, and includes a modem. However, Vodafone's \$30/3GB plan boasts 50% more data than the \$29/2GB package from Crazy John's.

Many resellers also have their own prepaid mobile broadband plans, so those are worth considering if you want a pay-as-you-go (PAYG) option.

— PREPAID BROADBAND

Prepaid wireless broadband is steadily increasing in popularity. All four carriers and many of their resellers now offer the freedom and flexibility of a PAYG package instead of being locked into a contract with fixed monthly spend.

Of course, prepaid's casual rates are generally more expensive than an equivalent contract-based data deal. Continued price cuts in the highly competitive market also mean you could still be better off on an entry-level contract plan if your mobile broadband usage remains fairly constant from month to month.

For example, it'll cost you \$99 to buy the modem for Optus's prepaid or 12-month contract (post-paid) plans. But while \$15 on the prepaid account buys just 500MB of data with a 15-day expiry, the same amount gets you 1GB per month on a contract.

However, to cope with a more varied usage pattern of ups and downs, prepaid wireless broadband is hard to beat.

There are two components to prepaid mobile broadband. The first is a starter kit containing a USB modem and usually, but not always, a chunk of data to get you up and running. At the time of writing, the bundled data was typically 1GB, although Exetel and 3 didn't include any data — customers need to buy this separately.

Just like a prepaid mobile phone account, PAYG mobile broadband also requires that you recharge or 'top up' the account. Each top-up has an expiry date by which all of that data must be used, although you can roll over unused slabs of data from one month to the next when you recharge the account.

Some mobile ISPs like Telstra have a standard 30-day use-by

HuntKey
Power Your Dream

X7 900W

- Complies with Intel ATX12V V2.3 & EPS12V V2.92
- Cable management design
- Strict voltage regulation ($\pm 3\%$). Provides stable voltage for system
- Advanced phase-shifting control full-bridge topology high reliability & efficiency

H403

- Complies with Intel TAC 2.0 Specification
- Extensive Front Panel-accessed Ports, e-SATA Ports Supported
- Water-cooled Radiator Supported
- 12cm LED Fan of Low Noise
- Mesh Design for the Front Panel
- Screw-free Installation

Balance King 5000

- Complies with Intel ATX12V V2.2 & SSI EPS12V V2.91
- Automatically adjusts +12V output according to CPU and graphic card's demand
- SLI Ready and supports Intel & AMD Dual Core CPUs and Multi Core CPUs

90W Universal Notebook Adapter

- 10 tips for compatibility with a wide variety of notebook brand
- Up to 87% efficiency and complies with Energy Star-V standards
- Multiple Protections: OPP, OVP, OCP, OTP and SCP

period on all recharges, while others offer an extended expiry period for more expensive top-ups. Vodafone and 3 range from 30 days for their 500MB data packs to a full year if you pay up for 12GB.

Optus and Vodafone will also boost the data allowance in each recharge pack by 15% and 10%, respectively, if you buy the recharge online instead of over the counter.

However, be on the lookout for nasty caveats hidden in the fine print of prepaid plans, the worst of which is the insistence by Optus on counting prepaid mobile data in 10MB increments, compared to the 1KB steps that are the norm for most prepaid and contract plans (although Vodafone charges in 1MB steps).

This means that every time you fire up your Optus prepaid mobile broadband connection, 10MB is lopped off your data allowance as soon as you connect. Even if all you do is visit a single web page,

download a single email or update your Facebook status, it counts as 10MB. If you're in a weak signal area and the connection drops out, that's another 10MB gone. Optus has granted one concession — the first 30MB of usage each day counts only as 10MB. However, once you go past 30MB in any given day every subsequent session will be counted as at least 10MB.

This is where choosing a mobile broadband reseller can deliver you a better deal. Exetel and Virgin use the Optus network, but both of their prepaid plans count data in more realistic 1KB increments. They also offer better value for recharges. The 30-day expiry on Virgin's \$15/500MB pack is twice that of Optus's \$15/500MB pack, and while \$30 gets you 1GB with a 30-day expiry on Optus and Virgin, Exetel doubles the data to 2GB and extends the use-by date to 90 days.

Making money online

Kurt Best walks you through the steps for setting up your own online business.

The past decade has seen the rise of online businesses that started from humble spare rooms or garages. While almost every business starts small, what makes online businesses unique is the ability to reach out online and grow without ever moving out of backyard premises. Despite this brand-new age of the virtual enterprise, the fundamentals of business still apply. Getting your online business off the ground requires the same considerations as for any business venture.

GET INSPIRED

Working out your concept is obviously a critical first step. Finding a new idea or a new spin on an old idea is the must-have ingredient to launch your online business. To test your ideas, start with some market research. Launch a search engine, type in some keywords and see what's out there in the space you're thinking of occupying. Look carefully at what's offered, how it's offered, pricing, competition, after-sales service — all the attributes you'll need to address once you take your business out into the worldwide marketplace.

If your ideas are 'to have an online business' and that's where they start and stop, you can use this method simply to see what's out there. Or try a site like www.nichegeek.com for inspiration. It provides

examples of great ideas that have been turned into wildly successful online businesses. If this doesn't get your mind racing at the possibilities, then you should question your entrepreneurial spirit.

PLAN TO SUCCEED

If your mind is swarming with ideas, it's time to get into the planning stage. A business plan is a vital first step in bringing your ideas to life and it should be a living document — something that will evolve and need constant improvement as you begin to implement your plan. There are many places to start when it comes to writing a business plan. You should check the web for examples, templates and ideas that will help form your creative energy into actions.

One site that's worth checking out is www.awp.com.au. Created by Australian Windows Publishing, this site has a great deal of free content aimed at helping small businesses get an online enterprise up and running. There's a free downloadable book, *The Internet Business Resource Kit* and links to sites in Australia and the US that provide business plan templates and other resources. There are government agencies at both federal and state level that provide a broad range of tools on their web sites, including business plan templates. These sites provide further details on regulations that apply to various types of businesses. You must know about these or risk incurring penalties.

Boiling it down to basics, a good business plan should cover the following.

- **Product.** What is it you'll build/sell/provide that's your reason for being in business? Be detailed and clear about what the product or service is and does. What components come together to create it? How does a consumer use it? And so on. Leave no stone unturned.
- **Market.** Who is your target market? What do they do, where do they live and what other products do they buy? Profile the market carefully. This will give you a powerful tool when it comes to creating a marketing plan.
- **Competitors.** Who are the other providers of the same or similar products? Understand

e-businessguide
an Australian guide to doing business online

The e-businessguide website provides information and resources about a business for small businesses in Australia and for those who want to start a business in the Australian market.

Click on any of these to find the best guide for your type of business to do online business...

- Understanding the basics, the benefits and how to get started
- Planning the business and how to write your business plan
- Setting up your website and online with your business
- Protecting security issues and how to deal with them
- Marketing, advertising and promoting your business
- Financing, including your website and marketing your use of the Internet

Not sure where to begin? This link to download our e-businessguide starter kit should show the website on any page as you can see at a glance what actions to explore.

their offering, pricing and method of delivery. Find out everything there is to know about their business model so you can understand what kinds of advantages they have over you, or vice versa.

* **Risks.** There are usually many existing and potential risks that will impact a business. The key is to understand and separate them into those risks that can be easily managed and those that require contingency planning. The survival of your business and your investment of time and money will depend on careful risk assessment.

* **Marketing plan.** You should already have a clear idea of who you want to sell to through your market analysis, but the marketing plan will be more about how you're going to get your message out to them and entice them to buy.

* **Operational plan.** Whatever your project outwardly must be matched by procedures and systems to ensure that you can deliver on your own hype. The operational plan should specify processes for every business function and outline how these will be resourced and managed.

* **Personnel.** If you don't have the time or skills to cover all bases yourself, you'll have to consider employing staff. A personnel

plan should identify the roles required in your business and the competencies needed to perform them. You can then use the plan to select staff. You should also give consideration to timing — it might be that once you reach a certain volume of sales or level of activity, you'll need to increase the headcount.

*** Budget.** With all of the above extensively mapped out, you'll be able to create a financial budget, modelling your upfront and ongoing costs and sales projection. Your budgeting should be conservative and even work on different scenarios, dealing with a number of different circumstances that could arise.

With your ideas structured into some sort of overview and action plan, you're ready to begin implementation.

INSURANCE

Before you get too far down the road of implementation, it's important to focus on the key findings from your business plan that point to insurance needs. Having insurance is not only important to understanding costs, but it will ensure that should the worst happen, you'll have some protection for your business and personal assets.

Business insurance covers a range of risks and can be grouped into these categories:

- * Property or assets insurance
- * Public/product/professional liability insurance
- * Employer liability (workers compensation) insurance

You may need to seek out cover in any or all of these areas — the business planning process should have uncovered most of the risks. If you're still unsure of what you'll need, speak with an insurance company or broker to work through a risk assessment.

Dealing with a broker can be a good option, as they're professionals who will work with a range of different insurance companies to get the best cover and

The Australian Business Register controls the issue of ABNs to Australian enterprises.

cost to suit your needs. They will also act as advocate if you need to make a claim. To find a broker, check out the National Insurance Brokers Association at www.niba.com.au. There you'll find a search tool to help you find NIBA brokers by postcode.

REGISTERING YOUR BUSINESS

A very important step will be to properly register your business; in particular, any name or trademark you wish to trade with.

The Australian Business Register is the first port of call. You'll require an Australian Business Number (ABN) before getting too far into establishing your business. An ABN is a national reference used by businesses and consumers to confirm the identity of the operators of a business.

To register and obtain an ABN, visit www.abr.gov.au. From there you can fill in an online form, which will also activate a GST registration (if required) and other business compliance areas managed by the Australian Tax Office. An ABN will be issued by mail in two to four weeks, or you can conduct a business search on the same web site after completing the application and your ABN will normally appear there within 24 hours.

WHAT'S IN A NAME?

Once you have an ABN, your plan may be to operate under a business name and obtain a domain so you can have a presence on the web. Business names are controlled by each state and territory in Australia, so you'll have to determine where your business will be based and register within that area. For a full list of state-based business registries, see the box 'Australian business registries' above.

To check if your desired name is already registered, you can refer to a single list of Australia-wide names, which is maintained by the Australian Securities and Investments Commission (ASIC) called the National Names Index. Visit www.asic.gov.au to search this database. A business name must be unique within the state it's being registered.

A trademark is different to a business name because it's used to distinguish the goods and services of a trader. A trademark

Australian business registries

Here is a state-by-state list of business registries in Australia.

| | |
|-----|---|
| ACT | www.ors.act.gov.au |
| NSW | www.fairtrading.nsw.gov.au |
| NT | http://nt.faircentral.net.au |
| QLD | www.fairtrading.qld.gov.au |
| SA | www.ocba.sa.gov.au |
| TAS | www.consumer.tas.gov.au |
| VIC | http://online.justice.vic.gov.au |
| WA | www.commerce.wa.gov.au |

provides the highest level of brand protection and therefore is superior to simply registering a business name. Registering a trademark can involve a series of fees, depending on what you're registering. It can cost several hundred dollars or more at a basic level, compared to business name registration, which is typically less than \$100. Go to www.ipaustralia.gov.au to find more about trademarks.

DOMAIN CONTROLLER

Obtaining a business name or trademark doesn't automatically give you the equivalent domain name, therefore you must also register a domain name with an accredited registrar. To register a domain name in the usual commercial registries (like .com.au or .net.au) you'll need an ABN and, depending on the name, a business name or trademark registration. An important consideration is choosing a domain registrar, as service and prices differ significantly. The important distinction is in what's offered for the price and what other services you'll require. Don't simply seek the cheapest provider — look for the right overall package.

If you need it, web hosting and design will be one of your major costs, so be on the lookout for providers that can deliver good value for money here. It's not essential that your domain registration, web host and web designer are one and the same, but depending on your level of skill and knowledge it could make sense to reduce the number of points of contact. And if you don't have extensive experience in these areas, a good place to start is with the domain registrars who also offer the

To find an insurance broker, visit www.niba.com.au.

DOING BUSINESS ONLINE > Starter's guide

FEATURE

full package: registration, management, hosting and design.

So, with your basic registrations in hand and a web site under construction, there's one other important consideration before you can make your first sale: how do you plan to collect payment?

MAKE THEM PAY

Most online businesses require secure, seamless and spontaneous purchasing options. Although other methods such as money order or electronic funds transfer from the customer's bank are viable, these methods don't inspire an efficient and easy shopping experience, which is the key to higher sales volume. Having an online merchant facility is a more immediate and less cumbersome way of getting paid.

A regular merchant agreement (like those run through an EFTPOS terminal in a retail outlet) doesn't extend to trading online. Given the different set of risks involved in obtaining credit card details over the internet, the banking sector has a separate registration process, which is available online. Most of the banks provide their own web solution, but will also interact with third-party gateways.

Deciding on a solution depends to a large extent on your customers. If they're not accustomed to purchasing over the internet or not based in Australia, then opting for one of the internationally known third-party gateways might make them feel more at ease. PayPal is one of the better-known options that's used widely — eBay liked it so much it bought the PayPal business! Your customer may have more comfort using a familiar method, and by association it gives you greater credibility. There are costs to set up a merchant solution, so shop around for a good deal.

HIT OR MISS

Once you have payment options, it's time

to bring in some customers. While the internet means the world is effectively your marketplace, the sheer volume of content online means that getting noticed is no easy task.

If you've chosen the right domain registrar, host and web designer, then you already have a team working for you to get your business noticed. They each play a role in making sure that anyone searching the web for content matching your business name and offering will get a hit. However, this doesn't guarantee that you're high on the list of search results.

Getting greater exposure could come in the form of buying space on search engines like Google or Yahoo! At www.ineedhits.com.au, you can purchase a package to devise and run a campaign on Google and/or Yahoo that aims to get your business higher on the list of hits.

Another method of getting your business noticed is to give it some exposure through a social networking site. Facebook has become a popular way to build awareness of businesses, connect with and grow a loyal customer base and draw attention to special events and new products. This type of viral marketing can be very successful, especially when you have a unique or novel offer that will be quickly shared.

It's all about getting traffic to your site, and the ways in which this can be done will vary depending on your product and your imagination.

THE WORLD GAME

In building your online business offer and marketing it, you must consider the jurisdiction you'll be operating in. Simply by trading on the internet, your business has the potential to sell globally, which means you may have to consider rules that apply in foreign lands. The ACCC has a number of resources at www.accc.gov.au, or you could try the Organisation for Economic

Co-operation and Development (OECD), which has internationally recommended guidelines. Visit www.oecd.org and search for **consumer protection**.

The top items covered by both Australian and international guidelines are:

- * Disclose your contact details, including a physical street address for the business.
- * Provide a secure online payment system and ensure privacy of personal information.
- * Clearly state terms and conditions, including warranty and refund policies (which are mandatory in Australia).
- * Advertising should be accurate and not be subject to fine print.
- * Provide a reliable complaints handling procedure.

OPEN FOR BUSINESS

Although we haven't explored every aspect of business you may need to consider, you should now be well on your way. Probably the most important piece of advice we can give is to surround yourself with mentors and advisers who fill the gaps in your skills and knowledge, and who are positive. Running your own business is hard work and there will be times when you'll want to give up. Positive affirmation from people who know you and your capabilities can be the energy boost you need to stay on course.

OFFICE APPLICATIONS

Rounding up in Microsoft Access

I have a problem in Microsoft Access. I need to round a value up to the nearest 500 so that 22,000 stays the same, but 22,001 would become 22,500. I need to do this to then make a calculation that relies on a certain number of cents being paid per \$500 dollars of value. I'm trying to do the rounding up in Access, but it just doesn't seem to be working.

— Max Hastings

The solution to your problem lies in the very handy MOD function. MOD is short for modulus and it

calculates the remainder when one number is divided by another number. For example, if you divide 22,001 by 500 you get 0 as the remainder, but if you divide 22,001 by 500 you get a remainder of 1. When a number is divided by 500 and there's a remainder other than 0, we know that number needs to be rounded up. The other function similar to MOD that we need to use is INT, which gives the integer part of a number—we can use it to get the number of times one number can be divided into another number, discarding any remainder.

So, a formula with this underlying logic will do the work. If the **test_number MOD 500 equals 0**, then the number is a multiple of 500, so any

calculation can be made on **test_number** itself. If not, find the INT when **test_number** is divided by 500 and add 1 before multiplying the result by 500 again to get the rounded up value.

If you simply want to cut to the chase and start making your calculations, then this logic converted to an actual formula will give you the integer to multiply by: **If (test_number mod 500 equals 0, test_number divided by 500, INT(test_number divided by 500) + 1)**.

In Access terms, this is the expression to use in a Query.

This Access query will determine how many times 500 goes into a number, which is itself rounded up to the nearest 500.

for example, where **totalvalue** is the number to round up and **myval** is the multiplier you're looking for: **myval: Int([totalvalue] Mod 500=0, [totalvalue]/500, Int([totalvalue]/500)+1)**

— Helen Bradley

OFFICE APPLICATIONS

Excel printing woes

When I click 'Print Preview' in Excel, the page breaks in my 19-page worksheet look fine. This also happens when I click 'Page Break Preview'. However, when I print, I end up with the first sheet of paper full of information and the second sheet of paper contains just one line. The third sheet is full and the

fourth sheet has just one line from the workbook. I don't know how to fix this. I tried to set a print area and it still prints the same way. All other spreadsheets print fine. Can you help?

— Steve Cawley

The problem is that while your page breaks are breaking up your worksheet into page-sized chunks, your printer is unable to fit all this information on a single

sheet, so it's printing over onto a second page and then honouring the page break by starting a new page where you asked it to.

There are two solutions I would try. First, make the top and bottom margins of the worksheet just a little bit larger. You can do this using the settings in the File → 'Page Setup' → Margins tab or I find it easier to do it in 'Print Preview'. In this case, click the Margins button to view them and drag on them to make them

larger and the page itself smaller.

The other option is to scale down your page size a little. You can do this from the File → 'Page Setup' options or by clicking Setup in 'Print Preview'. Click the Page tab, select the 'Adjust To' option and decrease it slightly. For example, if you're currently printing at 100%, change this to 95% to see if it works. Either of these solutions should have it printing correctly.

— Helen Bradley

WINDOWS

Virtual Windows 7

I'm having trouble getting the Windows 7 tryout from your September 2009 issue cover disc working using a virtual PC. My PC is running Windows XP Pro SP3 with 2GB of memory and a 500GB hard drive. I've watched your tutorial several times as well as reading the article. I first installed VMware Player and then Virtual Machine Shop, which I started up, selected the amount of system memory and hard drive space, and used the cover disc to install the ISO image. I created the Virtual Machine and a message came up that the image had loaded, but when I clicked the 'Start Virtual Machine' button, a message came up saying "No Boot File Name Received and Operating System Not Found". It would appear that Windows 7 is not loading from the cover disc. I would appreciate your advice on what the problem is.

— Don Roberts

This problem usually comes up if the system has two optical drives and either the September 2009 cover disc is in the wrong drive or you have a disc in the second drive. Try using the disc in the other drive and making sure the second drive has no disc inside. If you start the Virtual Machine again, you should find it will boot up from the PC User cover disc this time.

— Darren Yates

Virtual Machine Shop, PC User's software for running Windows 7 in a virtual machine.

HARDWARE

Missing software and drivers

Since buying a new PC, I find I can't load the software from my Hitachi DZ/MV270E video camera. Is there any current software available I could use to transfer data from my camera to my PC?

— Vic Graham

My understanding is that Hitachi supplied an optional cable that you could use to connect your camera to your PC. You could then get the data from the camera to your PC and edit the movies or play them back from there. The PC kit that came with the camera included PowerDVD XP to play DVDs, which isn't compatible with Vista (and probably not with Windows 7, either). There are more recent releases of this software available, however, and you can get information about them at <http://tinyurl.com/yd5e0ea>. For video editing, the original software was DVD MovieFactory SE — again, it's not compatible with Vista, although you can find more information about newer versions of the software at www.ulead.com/dmf/.

On your behalf, I also contacted Hitachi support who were most helpful, considering the company no longer sells consumer electronics in Australia. The support desk suggested that, to the best of their knowledge, you could use Ulead DVD MovieFactory, at www.ulead.com, Ulead VideoStudio or CyberLink Power2Go to edit your captured videos. They also suggest these programs should capture data from the DVD-RAM disc and finalised DVD-R content, too. They mentioned that if your PC has a Super Multi DVD drive, you can insert the DVD into your computer and capture it using Ulead DVD MovieFactory, rather than downloading it from the camera.

— Helen Bradley

PC User's PerfectPC software helps you put together the right PC for your needs and budget.

HARDWARE

Give me FireWire

I've used your PerfectPC recommendations for video editing in the past with great success. I'm now about to build a new video editing computer and was surprised and disappointed to find that your motherboard recommendation to go with a Core i5 750 processor was a Gigabyte GA-P55-UD3R. This motherboard doesn't have any FireWire ports for capturing video from my camera and would therefore be a waste of money for video work. Why do you recommend this and is there an alternative?

— Barry Fisher

I did a digital video camera roundup back in the November 2009 issue and of the 20 cameras I tested, not one came with FireWire. The only cameras these days featuring FireWire are now semi-pro, high-definition models that still use MiniDV tape. As for consumer models, since they're now all either hard drive or flash drive based, everything is USB. So in practice, FireWire is no longer a necessity when it comes to video editing. If you want FireWire, there is an alternative: the ASUS P7P55-M. It handles the Core i5 750 and comes with a single FireWire port, and sells for about \$140 online. Use [staticICE \(www.staticice.com.au\)](http://www.staticice.com.au) for price comparison.

— Darren Yates

RIPPING & BURNING

Dodgy disc

I've been trying to copy my home movie DVDs using the technique you showed in the February issue (page 78), but I'm having trouble. These discs will play on my PC as well as my DVD player, but I've tried to rip them and after the process starts, it gets to about 6% and then displays 0% again. When I look at the Output tab in Ripping & Burning Toolbox 2009, it comes up with stacks of messages, addresses and stuff like this:

`/CYGdrive/c/program files/pc ripper input/output error. error on sector 163013`

The above type of text kept scrolling for many pages with all sorts of other information and I had to take the disc out to stop it. I also couldn't get a screen grab, as the PC was too busy scrolling. Any ideas?

— Brendan Dalton

It looks like the problem is that your PC's DVD drive is having trouble reading the disc — that's what the "Error on sector 1630XX" messages mean. The reason for errors could be the

drive, the speed at which the disc is being ripped, or the disc itself maybe damaged in those particular sectors. If the drive can't physically read the disc correctly, there's not much the software can do.

The alternatives are to see if there are any visible scratches on the disc and clean them up the best you can, or possibly try another drive. I've had discs that rip in one drive but not another. At the moment, our Ripping & Burning Toolbox 2009 software doesn't have provision for changing the ripping speed. It could be that slowing down the ripping speed may allow the drive to get a better handle on those dodgy sectors. We'll look and see if we can update the program to add this feature in the near future.

— Darren Yates

WINDOWS

DrivImage XML

Does the DrivImage XML software described in the August 2009 issue of *PC User* back up the applications on the hard disk, or just the data? I'd like to know in case I can use this to protect the Toshiba software on my TE2300, which uses Windows XP. — Aren Harris

As explained in the feature 'Modernise XP' on page 46 of the August 2009 issue, DrivImage XML (free for private use from www.runtime.org/drivimage-xml.htm and this month's cover disc) is primarily a drive-imaging program. This means it will clone a byte-for-byte copy of your hard disk and everything on it. From the clone copy you can restore your hard disk or even a different one to exactly the way the original disk was at the time you made the image copy. Hence it will restore not only data files, but the registry and all of the installed software. Alternatively, DrivImage XML lets you back up individual files or sets of files and restore selected files either from the

WINDOWS

Australian spellchecker for Windows Mail

I recently installed Vista with Windows Mail on my new computer and have found that the spellchecker is rejecting my spelling, wanting instead to impose Americanised spelling on my emails. Microsoft has informed me that the only English spellchecker available for Windows Mail is US English. What are my reasonable options for an Australian English spellchecker, by way of substituting a non-Microsoft spellchecker or by changing my mail program, while retaining my present ISP as the provider of my mail service?

— Harry Pfeifer

Since you've just installed Vista, you're probably used to Outlook Express, Windows Mail's predecessor. Although Outlook Express didn't come with a spellchecker, it could use the one provided with early versions of Office, and the Office spellchecker included an option for Australian English. Starting

with Vista, Outlook Express was replaced with Windows Mail, which does have its own spellchecker, but only for US English, French, German and Spanish. As far as I can determine, there's no Australian English spellchecker available for Windows Mail, so you'll need to abandon that program if you want Australian spellchecking.

It shouldn't matter to your ISP which email program you're using, and I believe the simplest solution for you is to change to freeware Mozilla Thunderbird (from <http://tinyurl.com/TBird301> or this month's cover disc). You can install either the English (US) or English (UK) version and following that, install the English (Australian) add-on dictionary from <http://tinyurl.com/TBird-Oz>. If you want to stick with a Microsoft email program, you could go for Microsoft Windows Live Mail, freeware from <http://download.live.com/wlmail>. Although the default English is US, UK English is easy to include as an option because it's built into the US dictionary. You can also include Australian English, but that's more difficult. You'll find the details for adding both dictionaries at <http://tinyurl.com/WLM-Oz>. — Link Harris

DrivImage XML lets you create an image of one partition on another one.

clone copy or discrete backup. The program is designed to take advantage of Microsoft Shadow Copy, available in Windows

Server 2003/XP/Vista/7, which lets you back up parts of a drive that contain locked or open files. — Link Harris

OFFICE APPLICATIONS

Aligning data in Excel

In the January issue ('Align numbers in a table', page 72), you gave a solution for tabbing and aligning data. I'm using Microsoft Office Home and Student 2007 with Excel 2007. When I bring up the Ruler function in 'Page Layout', there's no icon for tab position. Neither can I tab across a cell using Ctrl-Tab. Is this a problem in Excel 2007 or is it a control that needs to be activated? — Tom Newsham

The instructions you're referring to relate to tables in Microsoft Word and unfortunately, the same commands don't work in Excel. To align text in cells in Excel, you need to use the Left, Center and Right justify buttons on the Home tab of the Ribbon. To indent the contents of a cell

from the left margin, click the 'Increase Indent' button on the Home tab in the Alignment area.

To align numbers so the decimal points are all lined up neatly, format them using one of the number formats, such as Number, Accounting, Currency and so on. Make sure that the numbers are all padded out to the same number of decimal places. You can do this by selecting all the values and then clicking the 'Increase Decimal' button.

Should you decide that you want your numbers to be inset a little from the right-hand margin of the cell, first format the cells the way you want them to look and then select the cells, right-click and choose 'Format Cells'. Switch to Custom format and you'll find that the current custom format reads exactly the way you want the cell to look, except for the extra spacing. So, in the Type box

The only tabs that are available in Excel are those you use inside a text box.

after all the code, press Shift-() to add an underscore character, then type M and click OK. What this does is push the number in from the right margin of the cell an amount equivalent to the width of an upper-case M, which is one of the largest characters in most fonts. The underscore character simply tells Excel to use the character

M as a space measurement and not as a letter.

There are no tab settings appropriate for working with cells in Excel and the only place you can use them is in a text box. In this case, pressing Ctrl-Tab will move you to the next available tab stop, allowing you to enter text in a text box neatly. — Helen Bradley

OFFICE APPLICATIONS

Controlling Windows Live Mail

I've just upgraded my PC from Windows Vista to Windows 7 and have had to replace Windows Mail with Windows Live Mail. I always check my email before downloading it with Mailwasher. I could delete or bounce any mail that I didn't want to download

and then click on 'Process Mail' to transfer control to Windows Mail, where I would download my messages. In Windows Live Mail, if I have the program open, mail continues to download, bypassing Mailwasher. I don't want this to happen. So far I haven't found a solution in the Options. I could close Windows Live Mail after each use, but

this is inconvenient. — Margaret Goldman

There are a couple of things you can try. The first is to stop the program from automatically checking for new email messages unless you do it. Go to Tools → Options → General tab and disable the 'Check for new messages every' checkbox.

If you already have this option disabled and if Windows Live Mail is ignoring this, as it may do, the second option is to remove this account from the list of accounts that are checked when mail is downloaded. To do this, click Tools → Accounts and choose the account. Right-click it, select Properties and disable the checkbox that reads: 'Include this account when receiving mail or synchronizing'. Then the account won't be checked for email messages unless you do so manually. This will allow you to do your spam management in Mailwasher and download your emails when you're ready to do so. — Helen Bradley

RIPPING & BURNING

Play me

I created a slideshow that's now in My Documents and plays fine on my PC. I copied it to a USB drive so I could plug it into my TV and watch it there, but the TV just says: "No recorded files". It apparently needs .jpg and .mp3 files. I converted the original to flash video (.flv) using SUPER, as I couldn't see any other file type that seemed to fit, but that didn't work either. I tried RBT2009 video encoder, which took hours and lost the audio. How can I convert a 1.7GB .wmv file to JPEG and MP3 format? — Mike Watts

Sorry, but you might as well give up now. The problem is your TV only supports JPEG images and MP3 audio, and that's separately, not together in the same file. While many of the newer, higher-end TVs from Samsung and LG now support video playback via USB, there are plenty of others

You can stop Windows Live Mail from automatically checking your mail so your spam filter can do its work first.

The ultimate portable storage solution with the world's first hard drive docking station for easy access to all your stuff. Sleek, ultra-thin design that is as stylish as it is striking.

(including yours by the sound of it) that don't, so there's really nothing you can do.

If you're serious about playing this file on your TV, you'll need a digital media player such as Western Digital's WD TV Live, which received our Product of the Year award in the February issue. You plug your USB flash drive into the WD TV Live and the WD TV Live into your telly. — Darren Yates

WINDOWS

Can't open PDF sites

My computer has Vista Home Premium SP2 and I use IE8 for the net. Since I upgraded from Adobe Reader 7 to Adobe Reader 9.1, IE8 won't open web sites that are .pdf files. Instead, it gives the error "Empty Referrer" (no referring page)". I can open PDFs OK in Adobe Reader from the computer. What can I do to fix this? — Terry Robinson

I can't duplicate these problems on my setup, so the best I can do is give the solutions that some claim have solved that problem.

1 Open Adobe Reader and click Edit —> Preferences —> Internet, uncheck 'Display PDF in browser' and click OK.

2 If step 1 doesn't work, close and reopen Adobe Reader, tick 'Display PDF in browser' again, click OK and see if this helps.

3 When you encounter a PDF link in IE, right-click it and select 'Open in New Window'.

4 If step 3 doesn't work, try it again after repeating 1 and 2.

You could also revert to your previous version of Reader (7.1.0) and then apply the 7.1.4 update from <http://tinyurl.com/AR-down>. Another alternative is to abandon Adobe Reader and install a different PDF reader, such as freeware Foxit from <http://tinyurl.com/Foxit31> and this month's cover disc.

PC User would like to hear how other readers using Vista have solved this problem with IE8 and Adobe Reader 9.x.

— Link Harris

An extension to the 'Fixed decimal places' macro toggles the toolbar button tooltip to indicate the status of the setting.

OFFICE APPLICATIONS

Toggle toolbar button tooltips

You answered a question recently (*PC User* February, page 68) about configuring Excel to automatically convert numbers to a fixed number of decimal places by providing a macro, which I have attached to a toolbar button. I would now like the status of the decimal places setting to be displayed in the bubble when I move my mouse over the button. At the moment, the message reads 'Fixed Decimal 2', but I would like to add On and Off to indicate its status. My hunch is that this will require some additional lines of code such as an If...Then...Else statement somewhere towards the end of the existing code.

Can you help?

— Paul Myers

This can certainly be done, but you might note that the setting is indicated on the Excel status bar, which reads Fixed if it's enabled. However, in the interests of doing this programmatically, let's pretend this indicator doesn't exist. The bubble you're referring to is the ToolTip text for the button and this can be controlled programmatically. Open up the Visual Basic Editor and add these lines to the code (I've given you the entire macro here, in case some readers missed out on the original solution). Sub toggleNumberEntrySetting()

```
Application.FixedDecimalPlaces = 2
```

```
Application.FixedDecimal = Not (Application.FixedDecimal)
```

```
If Application.FixedDecimal Then Application.CommandBars ("Formatting").Controls(17).
```

```
ToolTipText = "Fixed Decimal 2 - On" Else
```

```
Application.CommandBars ("Formatting").Controls(17).
```

```
ToolTipText = "Toggle Fixed 2 - Off" End If
```

```
End Sub
```

In my solution I've assumed that the toolbar button is attached to is called Formatting and the button is the 17th button on the toolbar. If this isn't the case (and that's unlikely), you must change the toolbar name to the toolbar you're using. You can determine this by right-clicking the toolbar and reading its name from the list.

Then, count the number of buttons going left to right across the toolbar — each button or drop-down list is one button and separators aren't counted. Change the number 17 to the number of your button on your toolbar.

The new code checks to see if 'Fixed Decimal' is enabled; if it is, the tooltip text is set to 'Fixed Decimal 2 - On'. If not, it's set to 'Fixed Decimal 2 - Off'. The code needs to check the status of the setting to ensure that the correct text appears on the button. Luckily this setting is sticky, so it remains consistent from one Excel session to the next. You could use similar code to toggle button tooltip text for any Excel button.

— Helen Bradley

An improved UAC

Rose Vines takes a look at Windows 7's kinder, gentler UAC.

Vista users are already familiar with User Account Control (UAC). For XP users, it's a new experience.

If you've heard the horror stories about UAC from your hapless Vista chums, there's good news: Windows 7's version of UAC is far more restrained.

User accounts are a good thing. They offer privacy and a way to create different computing environments for users with different needs. They make it easy for beginners and experienced users to share the same computer. UAC helps prevent beginners from messing things up and helps stop experienced users from being riskily adventurous.

_XP'S PERMISSIVENESS

In Windows XP, every account created during the initial setup of the operating system is given administrator status and since you're encouraged to make an account for each user of the system, that leads to a herd of administrators running rampant. Under XP, administrators get to do anything they like; a powerful position indeed and one that hackers are happy to take advantage of. Any program you run gains all the privileges of the user that's currently logged on, so malicious code can have its way with the system.

_7'S RESTRAINT

Windows 7 doesn't work like this (nor does Vista). When you install Windows 7, you're asked to create a single user account. Although this is an administrator account, it doesn't have the unfettered administrator privileges offered by XP. On Windows 7, administrators are subject to certain controls and the operating system runs in a special mode called Admin Approval Mode (AAM). The only other type of account available in Windows 7 is a standard account.

Both administrators and users with standard accounts running in the default AAM are generally able to work without hindrance. You can run applications, use Windows Update, change basic settings such as power options, add a printer or other hardware, and so on. It's only when you attempt other, riskier tasks, such as installing an application or configuring

advanced firewall settings, that you'll need administrator privileges.

When you attempt to perform such a task, a UAC dialog box will appear, requiring consent before you can proceed. When a UAC dialog appears, it freezes your computer temporarily—you must respond to it before you can proceed.

If you're logged on as an administrator, the only consent needed is for you to click Yes. If you're logged on as a standard user, a different dialog box will appear, requiring you to supply an administrator password before you can continue. Microsoft calls this OTS (Over The Shoulder) Credentialing. The idea is that when you encounter such a dialog, you call your administrator over (whether that's a member of your family or a system administrator in your workplace), they type in their password and click Yes, and off you go. There are a couple of benefits to this:

- * OTS Credentialing renders standard accounts perfect for children and for organisations wanting to lock down their PCs and prevent employees from making changes that could cause problems.
- * AAM reduces the need for most home users to use a standard account. Even

Windows 7 lets you adjust User Account Control's aggressiveness.

when you're logged on as an administrator, programs run in what's known as Least Privilege mode, and you must actively give your consent before a program can run with elevated privileges. So even if you use an administrator account, your computer is well protected. Contrast this with Windows XP, where if you're logged on as an administrator, all programs, including malware, will run with administrator privileges and hence have free reign of the system.

Chances are you've probably been using an administrator account on XP without realising the risks. Now, with Windows 7 you can use an administrator account and know that UAC will step in to help prevent you from doing something dangerous.

_ADJUSTING UAC

To adjust your computer's UAC settings:

- 1 Make sure you're using an administrator's account in Windows.
- 2 Click Start, type **UAC** in the 'Start search' box and click 'Change User Account Control settings' in the results list.
- 3 You'll be presented with a UAC prompt. Click Yes to continue.
- 4 Use the slider control to adjust the setting to a level that you're comfortable with, click OK and then respond to the second UAC prompt.

_TOP TIP

Throttle back UAC

Try to keep UAC at the highest setting you can. It provides real protection that you shouldn't ditch lightly. On the other hand, if you're setting up Windows on a new computer and installing loads of applications and new drivers, consider pulling the UAC slider way down so that you can proceed without too many interruptions. Once you've made all your changes, push the slider back up again.

Your Life, Our Inspiration

AL460 Media Player

Full HD 1080P, Unprecedented Visual Experience

AL460 plays 1920x1080p high resolution video smoothly, leading you into the world of high quality video world, perfectly displaying the most intricate quality picture and rich details!

Abundant File Format Support

Whether 720p RMVB/RM, or 1080p TS, ISO file, or traditional AVI or MPG files, the Apacer AL460 faithfully supports its users with the highest-quality of viewing experience.

Zoom in to your desktop

Link Harris explains how ZoomIt can improve your PC presentations.

If you ever need to explain what's happening on your PC's monitor, whether it's in a one-on-one situation with a friend or in front of a packed auditorium, ZoomIt can help you get across those curly concepts. Freeware from <http://tinyurl.com/ZoomIt41>, ZoomIt lets you zoom in on a particular area of interest on your monitor's display. Once zoomed, you can draw freeform, lines or shapes and type text. You can also draw and type without zooming.

For Windows Vista or 7 you also get LiveZoom, a feature that lets you use your keyboard and mouse on the zoomed display just as you normally would. Finally, for extended presentations, you can make the entire screen blank except for a digital clock that counts down to break time. You can control all of these features quickly using customisable keyboard shortcuts.

The first time you start ZoomIt, the program opens with the Options screen, which you can retrieve later by right-clicking the ZoomIt icon in the notification area. It's worth spending some time on the Options screen because most of the details of each mode are explained on its tab. Here are the highlights.

*** Zoom.** Press Ctrl-1 to enter Zoom mode and either Esc or right-click to return to the normal display. While in Zoom mode, you can adjust the amount of zoom with either the mouse wheel or the up and down arrow keys, but the only way to move the display around is by moving your mouse. Left-clicking the mouse will freeze the display and move to Draw mode, from which you can return to Zoom with a right-click.

*** Draw.** Although you can enter Draw mode from Zoom mode, you can also bypass Zoom mode completely by pressing Ctrl-2. Draw mode is indicated by a cross at the cursor position and you can centre this by pressing space bar. To alter the width of the line, press and hold the left Ctrl key while moving either the mouse wheel or the up and down arrow keys. Although the default line colour is red, you can change it by pressing: B (blue), G (green), O (orange), P (pink), R (red) or Y (yellow). There are also keys to press for a blank screen (W for white and K for black), which can be useful when you need a sketchpad. Press and hold the following keys while drawing to force a particular shape: Shift (straight line), Ctrl (rectangle), Tab

(ellipse), Shift-Ctrl (arrow). Finally, you can undo the last drawing action with Ctrl-Z or clear all of your drawing efforts by pressing E.

*** Type.** The only way to enter Type mode is by pressing T from Draw mode. The colour of your typing will be the same as the colour you chose in Draw mode. Although you can set the default font from Options → Type → 'Set Font' button, you must set the size of the text by adjusting the height of the vertical line in Type mode by using either the mouse wheel or the up and down arrow keys.

*** Break.** To start the timer, either press Ctrl-3 or right-click the ZoomIt icon and select 'Break Timer'. You can adjust the maximum time either from the Break tab or from the Timer display using the mouse wheel or the up and down arrow keys. With the timer running, you can press Alt-Tab to move to open applications, but to return to the timer display you need to left-click the ZoomIt icon. Although the timer uses the same font as in Type, you can change the colour of the display using the same keys that control the colour in Draw.

ZoomIt is frequently updated, so be sure to check the web site for the latest version.

stepbystep PUT ZOOMIT TO WORK

Press Ctrl-1 to enter Zoom mode and adjust the amount of zoom and the position of the image. Click the left mouse button to freeze the image and enter Draw mode, which is indicated by a coloured cross.

Use keyboard shortcuts to customise the colour and select the other drawing features you want. When you have finished drawing, press T for Text mode.

Text mode is indicated by a vertical line. Adjust its length with the mouse wheel to set the size of the text before you start typing. When you've finished typing, press Esc to return to Draw mode and Esc again to return to the normal display.

Set-top boxes as PVRs

Darren Yates continues his look at new low-cost set-top boxes that double as personal video recorders.

With the Australian Government beginning its analogue TV shutdown this year, the demand for digital set-top boxes (STBs) should increase. If you're in the market for an STB, make sure you consider one of the new breed that double as a personal video recorder (PVR) by just adding a USB flash drive or hard drive. Not all of these PVR-capable STBs are the same, but what is similar is how they store the captured video.

_ MPEG-TS

As I mentioned last month (see page 69), digital video is broadcast in what's called MPEG-TS (MPEG-Transport Stream) format. Unlike the old VCR, which has to do a lot of work to capture the old analogue signal and get it onto tape, PVR-capable STBs just have to read the digital data stream and store it. The beauty of this is that there's no degradation of video quality because they're storing the original digital signal. The only problem occurs when there's insufficient signal level to capture the digital data, although that's a whole different issue that can be generally corrected in most regions by either an improved antenna or antenna cabling. It also means the cheaper STBs capture the same video quality as the most expensive models because they're all just capturing the broadcast data and storing it.

The big question is what do you do with the data stream once you've got it on your USB flash drive or hard drive? Most of these STBs rely on FAT32 formatting of the drives, so they can't create files of greater than 4GB and therefore split them into chunks. Some STBs use a 4GB chunk size, others 1.5GB — it all depends on the STB. In any case, having videos split into multiple files isn't useful. Thankfully, the MPEG-TS file structure makes it very simple to put them back together again. All of the important information about the file chunk is stored in the chunk itself, so all you need to do is join the chunks back up into a single file and it will play perfectly.

_ DOS COPY

You'll probably laugh, but the simple way to do this is to use the good old DOS prompt and the `copy` command: `copy /b videochunk.01+videochunk.002+videochunk.003 completevideo.mts`. Basically, the above line

```

```

You can join multiple file chunks with one easy command.

tells the `copy` command to join these three videochunk files into a single file and call it `completevideo.mts`.

An even easier option is the following: `copy /b videochunk.* completevideo.mts`. This basically tells it to join all files with the name `videochunk` and various extensions into the single file `completevideo.mts`, and the `copy` command is smart enough to know to add files in numeric order. And just by sheer coincidence, almost all STBs give video capture chunks the same name and a numeric extension, either in the filename or in the file extension for each chunk; for example, `.001`, `.002`, `.003` and so on.

If you have the TEAC HDVR845, however, you'll find that it names the first file with the extension `.trp` with the following files `.001`, `.002`, `.003` and so on. All you need to do is rename the extension of that first file to `.000` and run the second of the above `copy` commands, and you'll end up with a single file at the end. The `/b` tells the `copy` command to copy these as straight binary files and not as text files.

_ MPEG-TS PLAYBACK

The one drawback — and it's only a minor one — of MPEG-TS-based video files is that Windows Media Player doesn't know what to

do with them. The alternative is to play them with something else, such as Media Player Classic — Home Cinema (MPCHC) and `ffdshow`. MPCHC is an updated version of Media Player Classic, the hotbed version of Microsoft's old Windows Media Player, while `ffdshow` is the do-everything all-in-one codec pack. Install both of these onto your PC (Windows XP and up) and you should have no trouble playing back the single `.mts` file you created with the `copy` command.

_ STORAGE REQUIREMENTS

With a mixture of high definition (HD) and standard definition (SD) STBs available, it's a good idea to keep in mind the average requirements of an hour's worth of video from each source in terms of storage needed. The typical figure is 2.5GB per hour for SD and up to 9GB per hour for HD video. Basically, that means an 8GB flash drive is generally good for three hours or so of SD video, while you'll need a 32GB flash drive to get the same runtime for HD video. The main difference between these STBs and traditional fixed-drive PVRs is the fact you can easily and quickly transfer the video from your flash drive to your PC's hard drive and be ready to record something else. 📺

Snappy network shortcut

You can get instant access to Network Connections, as **Link Harris** explains.

Windows' Network Connections lists all of the different types of network connections to your PC. It's there you can check the status of each connection, including its speed, the time connected and the data transmitted and received. You can also access and tweak the properties of the connection, including its TCP/IP settings, from Network Connections. Unfortunately, it's not the easiest place to find in XP and Vista is worse, with Windows 7 somewhere in between.

As with most Windows features, there are several ways to open Network Connections.

- * In XP, the easiest way is to click Start, right-click 'My Network Places' and select Properties. Alternatively, click Start → 'Control Panel' → 'Network and Internet Connections' → 'Network Connections'.
- * In Vista, there's not really an easy path to Network Connections. One option is to click Start, right-click Network and select Properties and click 'Manage network connections' in the Tasks list at the left.

TOP TIP

Keyboard shortcut

The default Windows keyboard shortcut begins with Ctrl-Alt. If that's what you want to use for your shortcut, simply type the character you want to add to it into the 'Shortcut key' field and Windows will automatically include the Ctrl-Alt. For example, typing N generates the shortcut Ctrl-Alt-N.

Alternatively, click Start → 'Control Panel' → 'Network and Internet' → 'Network and Sharing Center'. Then click 'Manage network connections' in the Tasks list at the left.

* Windows 7 dishes up similar unintuitive long ways round, but does offer the option of typing **Network Connections** into the 'Start Search' box.

If you frequently work with Network Connections in any of these versions of Windows, you'll want a quicker way to get

there than Windows offers. A shortcut, as illustrated in the step-by-step guide below, is one simple solution. You can either double-click the icon or drag it to the quick launch bar for one-click access. If you prefer using a keyboard shortcut, you can assign one from the 'Shortcut key' field shown in step 3. However, there are a few points to keep in mind when assigning a shortcut.

- * A keyboard shortcut must comprise a single character (letter, number or symbol), plus at least two of the following keys: Ctrl, Alt and Shift.

- * When entering the shortcut in the field, press and hold two of the three (Ctrl, Alt or Shift) before typing the character.

- * If the word None appears in the field after you finish typing, this means you have selected a forbidden character, such as Delete or the spacebar.

- * A Windows keyboard shortcut won't work if it's the same as the shortcut for an application that's currently open. 🗨

stepbystep NETWORKING CONNECTIONS IN VISTA

1 Right-click a blank spot on the desktop and select **New** → **Shortcut**. Type **ncpa.cpl** in the field and then click **Next**.

2 On the following screen type a name for the shortcut, such as **Network Connections**, and click **Finish**.

3 Right-click the new **Network Connections** icon on the desktop and then select **Properties** → **Change Icon** button.

4 Choose an icon that appeals to you and click **OK** twice. Double-click the icon to open **Network Connections**.

Improve your burn quality

Darren Yates looks at how to ensure your DVDs and CDs last the distance.

Given how cheap bulk storage has become, for some, optical discs have passed their use-by date. However, CDs and DVDs are still the easiest way to create stable backups, and copies of home movies and music CDs.

In the last few months, we've been looking at the idea of backups and really, if you only have one copy of something, you're just asking for trouble. That's why I've been recommending you think about multiple backups on multiple storage device technologies. In some ways, it's a bit like investment advice that says you should diversify your investments — spread your data around so that regardless of the technology, you'll always have a copy at hand. It's not all that useful to have all your backups on DVD if you only have one DVD drive. If it packs it in, you've got no (immediate) access to any of it until you go and buy another DVD drive.

The other thing you don't hear enough about is how to make sure those DVDs are the best quality you can get. After all, a DVD backup is only as good as your ability to read the data back off it.

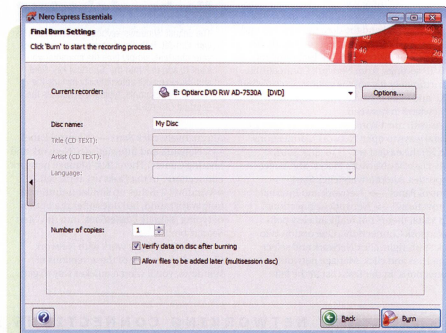

DISC & BURN QUALITY

Two things affect the quality of data on a disc: the quality of the disc itself and the speed at which you burned the data onto the disc in the first place.

If you're buying no-name discs from the local two-dollar shop and using them as backups, I'd be seriously rethinking your strategy. Some of those cheapie discs can be good, but some of them can be pretty awful, so it's a bit of a game of Russian roulette.

The other issue is burn speed. Because we're all in a hurry, most disc burning software defaults to burning discs at maximum speed. That's all well and good for speed — it's even fine if you're just making rough copies. However, it's a bad move if you're creating backups.

Most of the disc replication plants suggest that when creating masters for mass production, those discs be burned at the slowest speed. It makes sense. Given that the laser in your optical drive

Verify your discs

If you're serious about your backups, use the Verify option in your CD software to check the integrity of the data burned on the disc. Failing that, you should at least try to read some files off the disc so you know they're actually on there. Waiting until you need the disc might be too late if it hasn't burned correctly.

has to burn pits into the chemical layer of a recordable disc, the slower you burn, the more time the drive has to burn those pits accurately. The more accurate the pits, the less errors and the more likely the disc will be readable in any optical drive.

OPTIMUM SETTINGS

Unfortunately, the state of the optical disc market is such that you can't guarantee the name on the outer plastic cover is the company that actually manufactured the discs. It's not uncommon to see even some of the big-name brands use other suppliers to manufacture their discs. Still, given the media testing we've done over the last few years, we recommend you stick with brand names such as Verbatim, Sony and TDK. These brands have been the most consistent

in terms of their own manufacture, based on the MID (manufacturer identification) codes built into each and every disc. By all means, keep a stack of cheapies on hand for making quick test discs or copies of unimportant files, but for backups, we'd recommend those three brands.

As for burn speed, you should ideally choose the drive's slowest speed, which in most cases these days appears to be 4x. While the data rates are quite different, burn speeds for CDs and single-layer DVDs are arranged so that 1x burning takes approximately an hour to do and 4x speed burns take around 15 minutes. Because of changes to burning techniques above 4x, that rule doesn't apply at higher burning speeds. Backups should be more about quality than speed, so a 4x burn is a good compromise. 

Fixing YouTube videos

Are some of your YouTube videos displayed incorrectly? **Philip Moore** can help.

Last month we looked at pixel aspect ratios and the disparity between non-square video pixels and square computer/web pixels. This month let's take a look at how this affects older videos and what we can do to fix them.

THE PROBLEM

Back when YouTube only offered a 4:3 viewer, adding widescreen (16:9) content was a problem. It would often display videos as vertically stretched. This was because the rectangular pixels of the video were being displayed as square. The best way around this at the time was to render your video as letterboxed in a 4:3 clip. You would lose resolution, but at least it displayed correctly.

Then when YouTube introduced its widescreen display, along with support for high-definition resolutions, the old clips appeared surrounded by a black box. Even some footage that was 4:3 to begin with displayed incorrectly because it still used non-square pixels.

MAKING THE FIX

One way to take advantage of the 16:9 widescreen display in YouTube is to simply re-render your videos as true widescreen clips and upload them once again. This will give you a better-quality image, but it will be treated as a new upload. You can't simply update the vision for your existing

clip, retaining all the comments, hits and other details.

YouTube, like most online video sites and media players, prefers and expects video to be square pixel and progressive scan. However, YouTube has at least now given us a way to deal with non-square pixels directly — up to a point — using tags for your video. There are four tags offered that will scale (crop) or stretch your video to make the most of the widescreen viewer. You can apply these to any of your older YouTube videos and the results will appear instantly. It's also worth using the Quality tag to ensure that the best resolution available on the site is being shown.

stepbystep FIX YOUR YOUTUBE CLIPS WITH TAGS

1

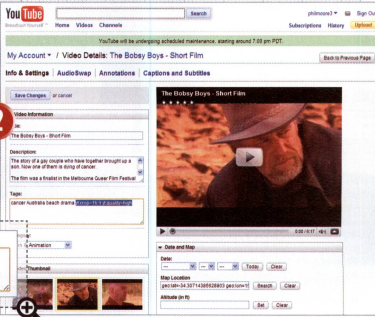

To fix a previously uploaded clip, log into your YouTube account and display the 'My Videos' page. Select the video you want to adjust and click the Edit button.

Depending on how you'd like to format your video, type one of the following tags into the Tags section. **Tag: ytcrop=16:9** zooms in on the 16:9 area and removes letterboxing. **Tag: ylstretch=16:9** fixes anamorphic content by scaling to 16:9. **Tag: ylstretch=4:3** fixes 720 x 480 content that's the wrong aspect ratio by scaling to 4:3, and **Tag: ytquality=high** defaults to a high-quality stream, depending on availability. In our example, we have a film that was 16:9 and letterboxed into a 4:3 clip. To better display this in the new YouTube, we added **crop=16:9** and **quality=high** tags. Note that if you use either of the stretch tags, these assume a pixel aspect ratio that may not suit PAL footage. Rendering with square pixels is the safest option.

Creating HTML newsletters

Helen Bradley explains how to create an HTML newsletter in Dreamweaver.

In Dreamweaver, all the skills you've acquired from creating web pages can be used to create email newsletters to send to your web site subscribers. However, some of the techniques won't work for newsletters, so we'll explain the best way to go about it.

EMAIL NEWSLETTERS

The first thing to appreciate about email newsletters is that they won't be displayed in a sophisticated web browser; instead, they'll be rendered by the recipient's email software. This might be a web-based solution, Outlook, Outlook Express or one of many other email clients. Because these programs aren't fully functional web browsers, you need to take a conservative approach to designing your email and the techniques you use to create it.

Specifically, this means you shouldn't use any fancy or cutting-edge technologies like Flash movies, HTML framesets, JavaScript or

complex table designs. However, you can use tables as a layout tool—these work well in newsletters. Take care when using CSS and never use an external style sheet file. CSS styles that may work are simple inline styles placed in the page code, or styles based on declarations in the body of the page. Unlike regular web pages, don't place your style declarations in the document head.

Even though you're limited to some fairly basic HTML, it's still recommended that you create your newsletters as HTML documents rather than delivering them as PDF documents, for example. To ensure your emails are opened and read, you should limit the number of steps between your recipient receiving your email newsletter and them reading it. If they open your email and can immediately read its contents, this is better than requiring them to click to open a web page or a .pdf file.

On the cover DVD

You'll find the video version of this tutorial on this month's cover disc.

HTML SPECIFICS

All links in an email newsletter should be absolute paths to the locations you're linking to, which means you must include the full URL including the http:// portion. Do this for links to pages and images that will be hosted on your web site or elsewhere. Never place important content in images because some email software won't display images, so your reader may never see this information.

If you plan to upload your HTML newsletter to a web-based email service, save it from Dreamweaver as an HTML document and upload it into your email service. You may then need to edit your links to include link-tracking code, if you track when someone opens and reads an email. In software such as Outlook, go to Insert → 'Attach File', select your HTML document and from the Insert drop-down list, choose 'Insert as text'.

stepbystep CREATE AN HTML NEWSLETTER

1

In Dreamweaver, create a new blank HTML page. Avoid the templates, as they contain `<div>` tags, which won't always render correctly. Use tables for structuring the newsletter design — to add one, go to Insert → Table. Here we've inserted one external table and a series of smaller tables inside it.

You can add a background colour behind a cell or add an image, such as for the header here. Keep the overall width of the table design to a small size, as email clients are smaller than browsers — 620 pixels or less is recommended.

2

3

To style your text, create an inline style using the CSS panel. When you create a link, make sure it's an absolute one. When you've completed your design, save the document as an .html file.

Show off your photos

Helen Bradley explains how to create a triptych in Photoshop to showcase your images.

A triptych is a series of three related images all framed together. It's a fun project to create in Photoshop with a series of your favourite photos. We'll show you how to create both a vertical and a horizontal triptych.

Start by selecting the images to use. You want to use images that relate to each other — they can be colour or black-and-white, but it's best not to mix the two. Open the first image and crop it to your desired size. You'll need images that are about three times wider than they are tall or vice versa. It's best to crop all your images to the right size before you begin, as this speeds up the process of assembling them.

To crop an image to 900 x 300, select the Crop tool and on the 'Tool Options' bar, type **900px** in the Width box, **300px** in the Height

box, **300** in the Resolution box and set it to 'pixels/inch'. Drag the crop rectangle over the portion of the image you want to use and press Enter. Repeat with the other three images so you have three images on the screen that are all exactly the same size.

Create a new image for your final project. If your images are 900 x 300 pixels, add an extra 200 to the width and around 500 to the combined height of the images, so you have an extra 100 pixels on the left, top and right border, some space in between the images and additional space at the bottom. To create the file, go to File → New and type the width and height in pixels. Set the background to Transparent, the 'Color Mode' to 'RGB Color', the Resolution to 300 pixels per inch (to match the resolution of your cropped

On the cover DVD

You'll find the video version of this tutorial on this month's cover disc.

images) and click OK. Display the Layers palette and drag the background layer from each of the three images into the final project image.

Drag the layers into roughly the position you want them to be in. Add a new layer (Layer → New → Layer), fill it with white and drag it below the three images. Ctrl-click on the layer thumbnail for the white filled layer to select its contents. Ctrl-click on the other three layers to select them and go to Layer → 'Align Layers to Selection' → 'Horizontal Centers' to centre the images. Drag the top and bottom images into position, holding the Shift key to constrain their movement. Select all three image layers and click Layer → Distribute → 'Vertical Centers' to space them evenly.

stepbystep CREATE A VERTICAL TRIPTYCH

1 Creating a vertical triptych is a similar process to creating one with horizontal panels. Select a series of images that will look good when cropped vertically — they need to have interesting detail along a vertical line. Crop each of them to exactly the same size.

Create a document in which to assemble the images. Drag the background layers of each of the cropped images into your final image. Add a new layer filled with white, Ctrl-click on its thumbnail to select it and Ctrl-click on the other three layers. Go to Layer → 'Align Layers to Selection' → 'Vertical Centers'.

3 Drag the leftmost image to where you want it to appear and drag the rightmost image into position. Select all three image layers and click Layer → 'Horizontal Centers'. Add some text below the images and then save and print your triptych.

Documenting your worksheets

Helen Bradley explains some techniques for documenting your Excel worksheets.

When you need to include documentation, instructions and other information on your worksheets, you can use Excel's text features. In some cases you may want the text to be hidden, while in other situations you may want it to be clearly visible. We'll show you a number of ways you can add information.

TEXT IN A CELL

At its simplest you can type text into a cell and either wrap it around using the Format → Cells → Alignment → 'Wrap Text' option, let it spread out over adjacent cells or widen the column so it fits within it. You can also merge a number of adjacent cells to create a container large enough for your text by selecting the cells and clicking Format → Cells → Alignment → 'Merge Cells'. When merging cells, you'll generally want to enable 'Wrap Text' at the same time.

When using the Wrap Text feature you can

create new paragraphs of text within a cell by pressing Alt-Enter to start a new line — pressing Enter doesn't work, as it completes the current cell entry and moves the pointer to the next cell.

COMMENTING A WORKSHEET

Comments are a handy way to add notes to a particular cell. A comment travels with the cell if it moves when other cells are deleted or added around it, and comments can be hidden so they won't get in the way of what you're doing. To add a comment, select the cell, go to Insert → Comment and a small comment box will appear with your name in it. Type your text in the box, drag on its handles to size it and then click outside it to close it.

The name that appears in the comment is an Excel setting, which you can change

by going to Tools → Options → General tab (or 'Excel Options' → Popular) and typing your preferred name in the 'User Name' box. If you don't want your name to appear in the comment, remove it by selecting and deleting it. The default font for comments is controlled by your Windows settings, and although you can format the text as desired, you can't change the default format without affecting other Windows features.

A cell that contains a comment displays a red triangle in its top-right corner and you can hold your mouse pointer over the triangle to view the comment. To display comments, right-click a cell containing the comment and select 'Show/Hide Comments'. This shows the comment on the worksheet as you work. To delete a comment, right-click the cell and select 'Delete Comment'. Comments don't print when you print the worksheet, even if they're visible.

stepbystep MORE TEXT OPTIONS

For larger amounts of text on a worksheet, use a text box. Select the Text Box tool on the Drawing toolbar or Insert tab and drag to create it. Click inside it and type your text. You can create multiple paragraphs by pressing Enter between them and you can format the text as desired.

To break up a long piece of text into a series of adjacent cells, select the cell containing the text and additional cells to the right and below it. Go to Edit → Fill → Justify (or Home tab → Fill → Justify) and the text will be broken up to fill the cells you selected. This technique works for pieces of text up to 256 characters in length.

You can also use AutoShapes for text, such as shapes from the Flowchart collection. Select the shape and drag to create it on the worksheet. Right-click it and select 'Add Text' to enter your text. Both text boxes and AutoShapes print with the worksheet.

SUPPORT

Altering spacing in your text

Stretch or condense your text with ease using Helen Bradley's tips for Word.

When you want to be a little creative with your text, Microsoft Word has some interesting tools you can use. We'll show you how to compress and stretch text to create decorative effects.

CONDENSING TEXT

In some cases, you may want your text to be tightly condensed so the characters are closer together. To do this, select the text, click Format → Font → 'Character Spacing' tab and from the Spacing drop-down list, select Condensed. You can condense text in multiples of 0.1 of a point at a time. For example, condensing by 0.3pt will give you a tighter-looking text than if it were set to zero. This dialog is available in Word 2007 from the Home tab by clicking the Font dialog box launcher.

You can also use the kerning option to reduce the space between certain character

pairs like T and O so they're nestled more closely together. Kerning is generally recommended for text 14 points and larger in size, which makes it something you would use for heading and title text.

EXPANDING TEXT

You may want to create a look that has expanded spacing between characters. In this case, select your text and from the 'Character Spacing' tab, click Expanded. You can then expand your text by increasing the space between letters (this doesn't change the font size, just the spacing). It lets you create effects where a long word and a short word are stacked on top of each other and are the same length, for example. You might use this for a document title or on a business card. The Word character spacing tool is a little hit or miss, as you can't stretch the text to exactly your desired

width; instead, you'll need to experiment to find the value that works in each situation.

USING SYMBOLS

Other options for fitting text and creating more interesting effects include placing a symbol between each character. To do this, click between the first two characters, go to Insert → Symbol and then locate a symbol to use. For example, in the Times New Roman font the character code 00B7 is a tiny dot, which is a good size to place between characters in a word or between words in place of a space.

The Symbol dialog behaves differently to other dialogs, as it will stay open as you work. This allows you to click in your document, move to the next character pair and click the Insert button again. Continue to move and click in the dialog until you have all the characters in place and then close the dialog.

stepbystep STRETCH WORDART TEXT

1

Go to Insert → Picture → WordArt and select a plain WordArt design. Type your text, select the font and font size to use, and click OK. Right-click the WordArt object in the document and select 'Format WordArt'.

From the 'Line Color' drop-down list, select 'No Line' and from the 'Fill Color' drop-down list, choose a colour to use for the text and click OK. If the WordArt has a shadow, remove that, too.

2

3

To adjust the space between characters, click the 'WordArt Character Spacing' button on the toolbar and set it to Loose, 'Very Loose' or Custom. Adjust the width and height of the text by dragging on the WordArt object handles (hold the Alt key as you drag to resize more accurately).

Managing files in Google Docs

Helen Bradley explains how to upload and download multiple files in Google Docs.

It's no longer difficult to upload or download multiple files at once in Google Docs. Recent changes to Google Docs include tools for bulk uploading and downloading files, which makes it easier for you to back up and manage your work.

UPLOADING FILES

You'll find the new upload tool in the main dashboard. Click the Upload button—> 'Select files to upload' and choose the files to upload from your hard disk. You can select files individually or a contiguous group by clicking the first file and Shift-clicking on the last file. To select individual files, Ctrl-click on each file to select it. When you've selected the files, click Open to add them to the list. If desired, click 'Select more files'.

When you're done, click the 'No Folder' button and select the folder in which to store the files, or leave it set to 'No Folder' and you can move the files later on. Click 'Start Upload' to start the process and a progress

bar will appear opposite the file being uploaded. As the files are uploaded, they're converted to Google Docs file formats. When the upload is complete, you can move the files to new folders or leave them where they are.

There are some limitations to the files you can upload, which means documents must be in one of these formats: HTML or plain text, DOC, DOCX, RTF, ODT or SXW. Documents can contain up to 500KB of text and embedded images can be up to 2MB per image. For presentation files you are limited to PowerPoint PPT and PPS formats up to 10MB in size, and for spreadsheets you can upload CSV, XLS, XLTX and ODS formats, each up to 1MB in size. PDFs can be up to 10MB in size. There are also limits to the overall size of the spreadsheets in terms of the number of cells, and for presentations, the number of slides. You'll find more information about these at <http://tinyurl.com/ltx5ov>. You can upload

Google Docs now includes a tool for uploading multiple files at a time.

a combined total of 5,000 documents and presentations, and 5,000 images.

EXPORTING FILES

You can also export multiple documents at a time from Google Docs. Select the documents you want to export, go to 'More Actions'—> Export and then select the export format to use for each document type. Click Continue and the files will be compressed into a .zip file that you can then download. It's possible to export up to 500MB of files in a single .zip file which, by Google's own estimate, is around 20,000 files.

With the ability to upload and download documents, spreadsheets and presentations in bulk, it's easy to make offsite backups of your work and convert your work from one format to another.

This month's Excel macro contains code and a routine utilising a scrollbar on a user form.

to increment or decrement data in a user form. You can adapt this code to use in your own macros. You'll find the configuration options in the `Form_Initialize` event and other relevant code in the `Scrollbar_Change` event and the `Button_Click` event. The macro also includes code for converting a number to a date and inserting a value as a formatted date in a worksheet cell. The macro and instructions for using it are contained in the file `dateselector.xls` on the cover disc.

MACROS OF THE MONTH

This month's Word macro overcomes one of the issues with Windows Vista Home installations: it will allow you to install alternative languages. Currently, you must scroll through an entire list of options, rather than have the installed languages appear at the top of the list in the Language dialog. The macro displays a dialog from which you can select one of a series of languages: English UK, English Australia and English US. You can also opt to have the change applied to the entire document, so you don't have to select the document before running the macro. If you don't choose to apply the change to the entire document, it will be applied to the text selected when you ran the macro. The macro runs from a user form with three option buttons, each of which represents one of three languages, and a checkbox that you click to select the entire document. When you click the 'Set Language' button,

that particular language is applied to either the current selection or the document. The macro and the instructions for adding your own preferences are contained in the file `language.doc`.

The Excel macro is a date selector that inserts a date into a cell for you. The selector uses a scrollbar to increment today's date, which appears in a text box in the dialog. The macro contains the code for configuring the scrollbar maximum and minimum values, its initial value and how far it moves every time you click the arrows or the bar itself. This data is used to increment the date appearing in the text box. You can move one week at a time by clicking on the scrollbar itself and one day at a time by clicking on its arrows. When you have the date you want in the text box, click 'Insert Date' to enter the date into the selected cell in the worksheet. This macro shows how to configure and use a scrollbar

Digital note-taking

Helen Bradley explains note-taking and storing research with Evernote.

Digital note-taking applications took off with the advent of OneNote from Microsoft, which debuted in Microsoft Office 2003. However, there are some good alternatives if you can't afford OneNote, and one of these is Evernote (www.evernote.com).

To begin, register at the Evernote site by clicking the 'Get Started' icon and entering your name, address, a username, password and accepting the Terms of Service. You'll receive an email containing a confirmation link, which you should click to activate your account. Log into your Evernote account using your new ID and password.

Once you do this, open the 'Welcome to Evernote' note and you'll see a link to Evernote for your computer. Select the Windows option, download the standalone version of Evernote to your computer and

install it. This local version of Evernote can be run on your computer and you can work with it when you're not connected to the web. It's linked to your online account, so the two can be easily synced.

Launch your local application and you can create a new note by clicking the 'New Note' button, typing the note and selecting the notebook to attach it to—right now you'll only have one notebook. When you're done, click Save. If you have a tablet notebook or a graphic tablet and pen, you can create an ink note and then write or draw your note.

Provided you're connected to the internet, you can sync your online and offline notebooks by clicking the Sync button. This way you'll have the same content available wherever you are.

Guest app of the month

In this column, Helen Bradley uncovers the best free or budget software alternatives to be found online, and also explains how to use them.

Click the monthly usage bar to see your current usage and how much free space is available. You get 40MB of storage, which is sufficient for approximately 20,000 notes, 270 web clips, 400 camera phone images, 39 audio tracks or 11 high-resolution photos.

Here you'll also find your Evernote notebook email address—you can use this to email content direct to Evernote so it can be stored as a new notebook entry. For example, if you have an image in your mobile phone, you can email it directly to your notebook.

When you use Evernote online, you can choose to share your notebooks with others. To do this, click Sharing—> 'Sharing Setup'—> 'Start Sharing' button. You can share your notebook with the world or you can invite people via email to access it.

stepbystep CLIP FROM THE WEB

When you're browsing the web and you find something you want to keep, select the content with your mouse and click the 'Clip to Evernote' link on your toolbar or launch it from your Favorites. Type a title for the note, add other identifying information such as tags and click Done to add it to your notebook.

To clip direct from your browser to Evernote, go to the Evernote web site and click the 'Sign In' button. Before you sign in, drag and drop the 'Clip to Evernote' link onto your Firefox toolbar. If you're using Internet Explorer, right-click it and select 'Add to Favorites'.

To add a new blank note, repeat the process, but without selecting any text. This lets you create a note from scratch at any time. When your notebook is open, you'll see all the entries and you can click to view any of them.

Hassle-free defrag

Helen Bradley explains how to keep your hard disk optimised with Magical Defrag 2.

Over time, as you add and remove files from your hard disk, they are kept in more scattered locations. Ashampoo Magical Defrag 2 can defragment your disk and organise your files so that how they're stored is optimised for faster reading. While many programs can defragment your disk, what makes Magical Defrag 2 live up to its name is that it does this in the background, and it doesn't hog vital system resources as it works.

A fragmented disk is something that happens over time as you add and remove files. The more space you consume on your hard disk, the less large blocks of free space exist for the computer to write large files onto. Over time, the computer will need to reuse the smaller areas that are created when programs and files are deleted.

When the computer writes a large file to lots of small areas on the disk, this results

in a 'fragmented' file. Later, when the computer reads that file, it takes it longer to read each of the small segments and deliver the file to you than it would if the file were written to a larger block of free space. A defrag program identifies the fragmented files and, one by one, moves them from their current place on the disk into larger empty blocks of space. The defrag program creates these spaces by relocating other files to create large empty spaces from lots of smaller ones.

Most defrag tools only work when you run them, which means you have to remember to do so. They also often run into problems when files on the computer change as you work — some programs will restart repeatedly when they encounter issues like this or they'll consume valuable system resources as they work, making

SPECIAL OFFER

For a limited time, PC User readers can get a big discount on the latest version, Ashampoo Magical Defrag 3, which offers an even more efficient defrag engine, multiple configurable defrag jobs and other new features. From inside the program, click the Internet menu → Upgrade and you'll be taken to Ashampoo's online store.

all your programs run more slowly.

Ashampoo Magical Defrag 2 overcomes these issues by running all the time in the background, so you never have to start or stop it. It also only runs when your computer is idle, so if you're working on an Office document or editing a photo in Photoshop, the program will pause. If you pick up the phone or make a coffee and your computer is idle, then it will fire up and continue to defragment files while you're away. As soon as you start using the computer again, the program will pause, waiting for another opportunity to continue its work. If your computer is left on overnight, it will work while the computer isn't in use.

stepbystep HOW MAGICAL DEFRAG 2 WORKS

1

To launch the program's control panel, start Ashampoo Magical Defrag 2 from your Programs menu. When the defragmentation is complete, it will be scheduled again for a week's time and the program will inform you of this. You can still click the 'Defragment Now' button to run it immediately if desired.

To configure the program options, go to Options → Settings. Here you can start and stop the service and set it not to run when your computer is running off the battery, which is a good idea if you're on a laptop. You can also determine whether you want the program to install a taskbar icon.

2

3

To see what the defragmenting process has done, click File → Statistics. Here you can read how many files have been defragmented and how many clusters were moved during the last week and since installation.

Manage your money

Helen Bradley gets your finances in order with B-free MoneyManager.

Smart people manage their money carefully, knowing what they have and planning their spending accordingly. B-free MoneyManager helps you manage your personal finances.

Once you have the program installed and running (you'll need an internet connection, as this program runs across the internet), you're ready to set it up. Start by entering your bank account details — a name is all that's required and no personally identifying details are stored. In the next step, import the categories you want to use to divide your transactions. A sample list will appear and you can use these. Select the checkbox adjacent to the 'Category Name' heading to select them. Then click Import.

To enter transactions, you can download them from your bank from within the

program. Click 'Go To' —> 'Download Bank Transactions'. Select the account from the drop-down list and your bank web site will open inside MoneyManager for you to download your transactions. If you prefer to do this manually, visit your bank's web site and download your transactions as a .qif (Quicken) file. Then, from inside MoneyManager, select Advanced —> 'Upload Quicken file' and import the data.

When this is done, click the 'Transaction List' option. Transactions that are red aren't recognised by the program, blue transactions are recognised as deposits and black transactions are recognised as withdrawals. For any transactions that aren't identified, you can identify them yourself. Click the Category button at the top of the screen to

**FREE FINANCIAL
ADVICE**

Register B-free MoneyManager and you'll be entitled to one hour of free consultation with Lescorp or Mathon Capital for advice on mortgage reduction, private wealth management, strategic financial planning or retirement planning. Go to www.b-free.com.au/pcusers/moneymanager and contact B-free for more information.

switch into Category mode, and then from the drop-down list in the Category column, select the one to apply the transaction to. You can add new categories and businesses, so you can set transactions by the businesses you pay or receive money from.

To add a business, from the Transactions list click the (+) symbol to the right of the transaction and add it in the dialog that appears. Use the 'Cash Transactions' option to enter cash expenses that aren't linked to a bank account. You might use these when you want to keep a record of transactions for budget purposes.

When you're ready to do so, you can view a report of your account by clicking Reports —> 'Bank Account Report'. This will show you the transactions and account balance.

stepbystep CREATE A BUDGET

Go to Budget —> 'Enter Budget'. Select the category of expense or income and then enter the data into the cells opposite the category. For regular expenses, enter the value for July and click 'Copy Across' to copy the value to the other months.

If you select a category and click 'Get Actuals', you can see your current year's expenditure to date per month. You can use this data as a reference for entering the budget amounts for all the months of the year. Select each category and enter budget values for each month of the year for that item.

2

Click Budget —> 'Budget Reports' and from the 'Current Period' drop-down list, select the month or period to view the report for. You can then compare the budget and actual amounts for that period and the variance. This will help you see how well you're managing your money.

Plant a family tree

Helen Bradley shows you how to get started on your family tree with MyHeritage Family Tree Builder.

Researching and recording details of your family tree is a fun and educational project for all the family. It's also a project that takes time to research and can be quite challenging. MyHeritage Family Tree Builder 4 is a good place to start recording your family's details. It stores all your data and images, and it links to the www.myheritage.com web site so you can share your research with family members.

Family Tree Builder comes with a sample file and it can import a GEDCOM file from another application; if you're just getting started, you can start a new blank project. To familiarise yourself with the program, open the sample project by choosing 'Load Sample Genealogy Project'.

Down the left of the screen are List view and Tree view, which are different ways to view your data. In the middle of the screen are the records for the currently selected

person in the list and their spouse. If you double-click on a person's name in List view, their record will open, together with their spouse's record. At the bottom-right of each person's record is an Edit and a Photos link, and across the top of the data window are tabs that reveal different information about the selected person. Double-click on a person's record to open the editing window and view the type of information you can record.

Click the Photos link to view and add photos of the person. To return to Tree view, click the tree icon on the toolbar. To see the charts that the program can produce, click the Charts button. You'll be able to view ancestor charts, descendant charts, close family charts and an all-in-one chart. Click the type of chart to view and select whether you want the chart displayed horizontally or vertically.

UPGRADE OFFER
From within your exclusive version of MyHeritage Family Tree Builder you can upgrade to the Premium version, which includes a one-year subscription to a Premium family site, all-in-one charts, Smart Research and other additional features.

To change the appearance of the chart, right-click it and select 'Chart Options'. You can then choose a border or use no border at all. You can also change other elements such as the font, background colour and the facts included with each person. There are chart styles that you can apply by simply clicking the Styles button on the toolbar and selecting the style to use. The charts are customisable, so you can choose to display and print exactly what you want to see.

To see a map, click the Maps icon and a map of locations relevant to people in the family tree will be displayed. To return to the main program window, you can click Home view or Tree view.

stepbystep CREATE A FAMILY TREE

Once you have a basic understanding of how the program works, you're ready to create a new family tree for yourself. To do this, click **New** and type a project name. Click **Next** and choose whether to publish your project to a family site on www.myheritage.com — it's a good idea to do this as a backup of your data.

Click **Next**, select the languages for your project and click **Finish**. Click the 'Add Family' button to add your first family member. If there are details you don't have, leave those areas blank, as you can come back and add that information later.

Once you've added the first family member, you can move forward and add sons and daughters, or move backwards and add fathers and mothers. If you have photos for your family member, click **Photos** and add one or more photos for that person. Continue to build the family tree as you gather your information.

Homework help

Gail Lipscombe looks at the best sites for helping students (and their parents) with homework.

Whether or not you think homework is a valuable part of your child's education, having to do homework and assessment tasks is inevitable. And while homework isn't usually a whole lot of fun, the internet can make it much less of a chore, with loads of sites just waiting to help. There are many sites that have done a lot of the legwork for students, listing loads of links to information on all kinds of school subjects and topics within those subjects. In this feature, we'll look at sites with information right across the general curriculum. However, subject-specific help is readily accessed using Google. Just type in the subject you're interested in, including the words **free** and **help** (for instance, **free maths help**), and you'll be presented with loads of useful sites.

Many of the sites below also have an 'ask an expert' feature, where kids can access the answers to thousands of questions already asked by other students, or ask their own.

PARENTS & HOMEWORK

While kids should be doing their own homework and projects, parents will be called on at some stage to explain something kids don't understand or lend a hand with something a bit tricky. The problem is that many parents feel totally inadequate when it comes to helping out, as things have changed a lot since they went to school — the answers are still the same, but how you get there can be very different from the good old days.

The internet can help out here, too. There's lots of advice on the net for parents on how they can help their kids when it comes to homework, establishing good study habits and preparing for exams.

Encyclopaedias

Electronic encyclopaedias have come down to a two-horse race: Encyclopaedia Britannica and Wikipedia. Encyclopaedia Britannica comes in two forms, besides the traditional printed option: \$69.95 a year for the online reference product (www.britannica.com) or \$99.95 for the deluxe suite on DVD. Wikipedia (<http://en.wikipedia.org>)

REVIEWS

FACT MONSTER HOMEWORK CENTER

WEB www.factmonster.com/homework

The Fact Monster Homework Center is part of the huge Information Please web site and is brimming with resources to help kids with homework and assessment tasks. They can click through to subject-specific information in the Subjects section, get help developing skills such as writing and studying in the Skills section, or go to the Reference section for access to a load of resources including almanacs, maps, a dictionary, an encyclopaedia and biographies. There's also a range of tools available, such as calculators,

95%

PC USER
BEST BUY

converters and tables. A lot of the information is US-centric, but a huge amount is relevant to us.

There's also an extensive list of Q&As with a featured question of the day. Kids should check out the other tabs on the left of the page for additional links and information. **PC User says:** A little US-centric, but there's plenty of good information here.

THE KIDSKNOWIT NETWORK

WEB www.kidsknowit.com

This is a fabulous network of sites that will motivate kids to learn and is quite different to all the others here. The fun visual and audio approach will be more engaging for younger kids, reluctant learners and those who learn best by seeing. The site's educational videos will help kids get a good grasp of concepts and basics across the curriculum; each video introduces a topic and at its conclusion, kids have to answer a quiz on the content. If they don't get 80% or above, they're instructed to watch the video again. There are also heaps of learning games that cover all the major

PC USER
BEST BUY

90%

subject areas, printable educational comics, science video podcasts (featuring the funny, freaky Nanna KnowitAll) and songs based on educational topics across the curriculum. Kids can search by topic or presentation style. **PC User says:** A visual approach to learning that will motivate even reluctant students.

Free online tutoring

Many public libraries and schools across Australia provide a free online tutoring service through the <http://yourtutor.com.au> site, where kids can chat live with a tutor to get help with their homework or other aspects of schoolwork. To find out if your local library or school subscribes to such a service, ask your child's teacher or call your local municipal council.

ASK KIDS

WEB www.askkids.com

Ask Kids is the junior version of the popular Ask Jeeves web site, which lets you type in a question and then presents you with links to sites where you can find the answer. It has a very simple interface and is easy for kids to use, as they just ask their question in regular language; for example: how do you do long

division? They are then presented with a list of relevant web sites, video and images, which they can then work their way through. On the Schoolhouse tab, kids can browse thousands of web sites with educational content (these can be filtered by age group), or they can narrow down their search by clicking on one

of the school subjects in the left-hand panel (mathematics, science, history and language arts). Kids can also access other learning resources, including an environmental encyclopaedia and maths basics.

PC User says: This site is easy to use and kids can ask specific questions.

85%

BJ PINCHBECK'S HOMEWORK HELPER

WEB <http://tinyurl.com/Soonwh>

Now part of the Education section of the Discovery Channel web site, BJ Pinchbeck's Homework Helper has been around for years, helping students through links to information for assignments and school projects. Kids can browse alphabetically through an extensive list of links to useful educational information, or choose from a drop-down list of subjects. The subject list includes 'Ask BJ', where kids

can click to ask a question. On the left-hand side of the home page are links to free clip art, puzzle makers, brain boosters, science projects and more. There are resources for educators, including a 'Lesson Plan Library', and 'Home Resources' has interesting video lessons on the major subject areas.

PC User says: Loads of links to quality web sites and the ability to ask questions.

85%

CYBERSLEUTH KIDS

WEB <http://cybersleuth-kids.com>

CyberSleuth Kids is an internet search guide for students from kindergarten to Year 12, so it's one all the kids in the household can use. They can enter a keyword or click on one of the 20 topic groups to browse. When kids click on a topic, they're presented with thousands of links, with descriptors of the content to help filter them. The site also offers 85,000 pieces of free clip art and video, which is very

handy for projects and presentations. The site also has loads of other interesting things for kids to do including crossword, word search and Sudoku puzzles; colouring pages; safe online games to play that are regularly updated; and downloadable maths worksheets on which to practise.

PC User says: Caters for all students and has fun things to do between assignments.

85%

YAHOO! KIDS HOMEWORK HELP

WEB <http://kids.yahoo.com/learn>

The Studyzone area of Yahoo! has a range of educational information and tools for kids, including links to information about animals and other subjects, science videos and more. Kids can also ask homework questions by clicking on the 'Ask Earl' tab and typing in their question, name and age. The Reference tab accesses a dictionary and encyclopaedia,

but take care with some of the spellings, which are US English. There's a conversion calendar and a 'World Factbook', where kids can find all sorts of information on countries around the world, including history, climate, currency, population, flags, maps and more.

PC User says: This site offers interesting content for younger kids.

On this site tutors answer kids' homework questions live. Kids can also browse through past questions and answers.

eNotes

www.enotes.com

More than 3,500 literature study guides, Q&A forums, literature criticism, reference content and more.

HOMEWORKSPOT.COM

WEB www.homeworkspot.com

HomeworkSpot is a portal that provides links to all kinds of information for students with separate sections for different grade levels: elementary, middle and high school. These are US age breakdowns, but they correspond roughly with primary, junior and senior high in Australia. Each age grouping has links to particular subjects, which contain links to useful information for help with homework

and assignments. There's also a reference section, with a range of materials including dictionaries, almanacs, encyclopaedias, maps, calculators and more. The sites tend to be US-centric, but there's lots of valuable information for Australian students. There are also resources for parents and teachers.

PC User says: A good reference resource that's easy to access.

KIDSCCLICK!

WEB www.kidsclick.org

The links on this search portal are selected by librarians at the Kent University in the US, so you can be sure they're reputable and well suited for your child. They're divided into categories such as facts and reference; science and math; the arts; weird and mysterious; religion and mythology; sports; society and government; machines and transportation; literature; reading, writing and speaking;

computers and the internet; and geography, history and biography — all with sub-categories, so it has just about every homework need covered. However, because the site is US-centric, watch out for spelling discrepancies, particularly when using the tools in the reference section.

PC User says: A great collection of reputable sites specifically picked for kids.

KIDS.NET.AU

WEB www.kids.net.au

Kids.Net.Au comprises four sections — 'Web sites', Encyclopaedia, Dictionary and Thesaurus — or kids can enter a keyword in a search box to see references from all areas of the site. Click on the 'Web sites' icon to be taken to selected sites in categories such as arts, computers, entertainment, games, health, news, people and society, sports and hobbies, teen life and your family. The Encyclopaedia

section sources information from Wikipedia (see the Encyclopaedias box on page 89 for more on Wikipedia). Although Kids.Net.Au is Australian-based, a lot of the links are to fairly US-centric sites, including the Encyclopaedia and Dictionary, so once again, watch out for US spellings.

PC User says: This reference site caters for a full range of school and preschool ages.

WEB WOMBAT CLASS MATES

WEB www.webwombat.com.au/kidsclass & www.webwombat.com.au/schools/secondary

Web Wombat is a meta search engine and its Class Mates resource is first-rate. It's divided into two sites: Kids' Class Mate, which caters for primary-aged students, and Class Mate Secondary, aimed at high school students. Both contain links to educational material and are visually designed to appeal to each group. They cover a range of issues in addition to homework help, such as space, science,

dinosaurs, maths, communications and music. Class Mate Secondary is much more comprehensive, covering the major school subjects, issues such as bullying, genealogy, reference tools, virtual tours of museums and galleries, and more. Unlike other sites here, it features links to Australian information.

PC User says: The only site here that covers lifestyle issues such as bullying.

Homework & exam tips

Top web sites

Gail Lipscombe reveals 10 useful and interesting web sites in our monthly guide.

Connected Women

www.connectedwomen.net.au

The Connected Women site specifically targets women with an interest in technology. It's written in plain English and covers all types of technology from gadgets to whitegoods via news, reviews and informative articles. The site also has a Q&A section where women can get answers to their tech questions, plus there are regular competitions you can enter to win some great consumer tech products. You can also sign up to receive a weekly newsletter.

eMedical

www.emedical.com.au

The eMedical site comprises three separate sections: 'Medical info online', 'Consulting online' and 'Pharmacy online'. The first section has links to and reviews of useful web sites, with information on a huge range of medical issues and health issues, plus chat rooms. The Consulting section consists of message boards on a variety of health issues where you can communicate with other site members. The Pharmacy section lets you buy prescription and non-prescription medications online.

The Cosmetics Club

<http://au.cosmeticsclub.com>

There are so many sites offering discount cosmetics these days that finding the best bargains can be a very time-consuming process. This site is the ideal solution: it searches over 60 online stores and eBay sellers to find the best deals online for brand-name cosmetics, skincare products and fragrances. It's free to join the club and as well as finding the cheapest price for the products you want, you get a percentage of the purchase price as a cashback reward.

Friends Reunited

www.friendsreunited.com.au

As well as letting you stay connected to others, the internet helps you hook up with people you've lost contact with. This site allows you to search for and contact people you knew at school, at work and through clubs and associations. The service used to

cost money, but now it's free; it acts as an intermediary, connecting members on your behalf so your contact details remain private unless you choose to share them outside the site.

All Woman Talk

www.allwomantalk.com.au

This site gives women the chance to become influencers by giving their opinions on a broad range of topics, products and services specific to women. By filling out a profile and completing the site's surveys, if you're accepted as a panellist, you'll be eligible to go into the quarterly prize draw where you'll have the chance to win between \$100 and \$500 in cash. There are also forums where you can chat with other women on a variety of issues.

Giveaway of the Day

www.giveawayoftheday.com

This web site offers a different licensed software product to download for free for 24 hours, with no strings attached. The site details the software's features, a link to the commercial product and the size of the file to download. Each day's software is available from 7pm (AEST) until the same time the next day and you can sign up to get daily email notification of each new product offer. All software is fully working and yours to keep.

searchzooka

www.searchzooka.com

This search tool lets you trawl the net using all the major search engines. It applies a common advanced search algorithm that lets you filter results without having to remember the different advanced terms used by each one. You can filter by language, relevance, time period, country of origin, location of the keyword, file type and more. It also remembers your commonly used searches so you can return to them in a click. There's a video tutorial on the site as well.

The Cut My Pic web site allows you to crop your digital snaps online.

Lazyfeed

www.lazyfeed.com

If you like to keep abreast of what's new on the net in a particular subject area, but don't want to sign up for RSS feeds from individual sites and trawl through a whole bunch of stuff you may not be interested in, you might want to give Lazyfeed a try. The home page shows live updates on the following topics: sports, TV shows, music, movies and food. If you sign up to the site, you can add your own topics for your personal Lazyfeed page.

The Freecycle Network

www.freecycle.org

This site will let you offload your unwanted goods for free to other people in your local area in need of those items, making both parties happy. Freecycle is a global community with almost 7 million members and is broken up into geographical groups, with a volunteer resident in each area moderating that group's classifieds. Membership is free. Just type in your location to find your nearest group, or you can start one if there isn't one already.

Cut My Pic

www.cutmypic.com

This site does just one thing — customised online cropping — but it does it well and very quickly. In a simple three-step process, Cut My Pic lets you upload an image to the site, crop it (adding rounded corners and drop-shadows if desired) and then email it. The service is free. This is a good, quick cropping solution if you're away from your computer and don't have your regular software handy.

For kids

Gail Lipscombe reviews the latest software, web sites and tech toys for kids.

THE WHIZKIDS: PROFESSOR SCIENTIFIX AND THE MYSTERY OF THE BLUE GOLD

AGES FROM EIGHT YEARS / PRICE \$29.95 / CONTACT MANACCOM
PHONE [07] 3331 5999 / WEB www.manac.com.au

Here's another science adventure from *The WhizKids* educational series that will take kids on a fun learning journey exploring topical science and environmental issues. In this adventure, the WhizKids get a request for help from a friend in Africa where the water supplies are mysteriously

disappearing, with some wells drying up and others filling with seawater. At the same time, an evil mad scientist, who appears to have reformed after a stint in jail, has found worldwide success with his desalination plants. Could they be connected? Kids find clues by reading printable

fact sheets and answering questions on environmental topics. There are three levels of difficulty, so a range of abilities is catered for, giving the software a longer shelf life.

PC User says: A fun way to learn about the environment and topical science issues.

95%

HOP! STUDY

AGES FROM 13 YEARS / PRICE \$29.95 / CONTACT MANACCOM / PHONE [07] 3331 5999
WEB www.manac.com.au

This program helps students organise information for essays and projects, and manage their time for better homework and study outcomes. The Planner tool helps kids organise their whole school year by plotting assignment deadlines and developing an action plan for

their work — they can also factor in their personal time for a good work/life balance. The work management section offers 11 project templates to help plan and complete assignments, including breaking tasks down into manageable steps. There are 70 additional templates for

diagrams, timelines and more for organising research information. The testing features are also great for reviewing information. All this is packed into a simple, clean interface that just works.

PC User says: A great student resource for easily organising time and tasks.

85%

STORYBIRD

WEB www.storybird.com

The Storybird site offers kids the opportunity to create free ebooks from their own stories, using exclusive illustrations that are provided as part of the service. The illustrations are more than just a complement to the story; they're also meant to be an inspiration for the creation of

stories. The ebooks are simple to put together using a drag-and-drop process. The site will auto-generate a cover for the story, but this can be altered. Once the book is created, kids can email an invitation link to friends or relatives such as grandparents to show off their

work. Kids can read published stories from other kids on the site, comment on them and create a favourites list. For very young children, parents can create stories for them.

PC User says: A great resource to encourage young kids' reading and creative writing.

85%

FLUTTERBYE FAIRY GLOBE

AGES FROM FIVE YEARS / PRICE \$49.99 / CONTACT FUNTASTIC
PHONE 1800 244 543 / WEB www.funtastic.com.au

The Flutterbye Fairy Globe is a clear plastic globe, which is meant to be a dew drop, set in bright pink housing with a little fairy inside, who flies around her fairy world when the globe is switched on. She'll talk to you (over 60 phrases), dance for you

and give you kisses, and you can ask her questions. However, you need to look after her by feeding her, telling her you love her and saying goodnight when it's time for her to go to sleep (you can wake her up again by tapping on the globe), all via the globe's care

buttons. This toy was the winner of the Girls Toy of The Year Award at the 2009 Australian Toy Hobby and Nursery Fair and is sure to be a hit. It requires three AA batteries to operate.

PC User says: Very cute, but it's really just for the girls.

80%

Lest we forget

Heather Garnsey explains how to find war graves and military records online.

Interested in knowing if any of your family enlisted in the army during WWI? Trying to prove a story that someone on your tree died at Gallipoli? This month we look at some sites that might help.

The work of the Commonwealth War Graves Commission (CWGC) to honour the burial place of all service men and women is well known and its web site (www.cwgc.org) is a great starting place to find family members among its 1.7 million records. From the home page you can search the records of an amazing 23,000 cemeteries worldwide — just enter what you know through the 'Search our Records' link. The results page will show details of any matching burials or commemorations, including the memorial inscription as well as links to a plan and photographs of the cemetery. These are especially useful if you're planning to visit and want to find a specific memorial.

But if your chances of getting to the other side of the world to visit your great-grandfather's headstone are slim, you'll be interested in a new site: the War Graves Photographic Project. Working in association with the CWGC through the work of dedicated volunteers, it aims to photograph every headstone in all the CWGC cemeteries

You can locate WWI service personnel using the interactive Anzacs map to click on a place of enlistment.

Mapping our Anzacs

Duze, Eric

Cemetery: Villers-Bretonneville Memorial
 Area: Duze
 Rank: Private
 Official Number: 3401
 Date: 10th Dec. Australian Infantry A.I.F.

Force: Army
 Nationality: Australian
 Details: 17th April 1917, Age 25, Son of John and Caroline Duce of Police Constable Bureau, Haverhill, Australia. Born in Devonport East England.

Photograph and details by volunteers: CWGC
 Back to search results

The War Graves Photographic Project is run by volunteers to commemorate all those buried in CWGC cemeteries around the world.

positively identified. This would mean their name can be placed on their new headstone, rather than the 'Known only unto God' inscription that's used when identification is impossible.

If you'd like to learn more about the service records of family members, you should visit the National Archives of Australia at www.naa.gov.au. There are a number of ways you can explore the military records they hold, including using the 'Mapping our Anzacs' link from the home page (which lets you view the records of everyone who enlisted from a specific Australian town or suburb) or by entering their name using the 'Record Search' feature, located at the top-right of the home page. All WWI personnel records have been digitised and are downloadable for free, and WWII dossiers are being gradually added. The latter links in nicely with another site, the World War Two Nominal Roll, located at www.ww2roll.gov.au.

A survey of sites of military interest wouldn't be complete without mentioning the brilliant Australian War Memorial site at www.awm.gov.au. There'll you'll find background information about the various campaigns in which Australians have fought, pictures, links to biographical databases and much more.

With Anzac Day on the horizon, it's a great time to explore these sites.

around the world. Already more than a million names have been recorded and you can do a search at www.twgpp.org to determine if any of interest to you have

already been photographed. If so, you can order a high-resolution copy for £3 by email or £5 by mail.

Incidentally, if you'd like to help with photographing CWGC sites in Australia, visit the Volunteer section on the site and learn how you can join the 25 Australians already committed to the project.

In recent months there's been renewed interest in the work of the CWGC, following the discovery of mass graves of Australian and British soldiers in Fromelles. You'll find some fascinating footage about this project in the 'Audio-Video' section of the site, which promises to be updated as more commemoration events take place during 2010. Family historians are helping track down possible descendants and DNA is being used to determine relationships in the hope that as many as possible can be

GADGETS / GAMES

COOL & NEW

ZUNE HD 32GB

PRICE \$399 / **CONTACT** MWAVE AUSTRALIA
PHONE 1300 727 446 / **WEB** www.zune.net/en-AU

Microsoft's Zune HD is its second offering in the portable media player space and while the original was a little underwhelming, the new model actually manages to be a solid counterpoint to Apple's iPods. The Zune HD still hasn't officially been released outside the US, but local online retailer Mwave (www.mwave.com.au) is offering imported models in 16GB and 32GB sizes, and kindly lent us one for testing. In overall function, the Zune HD's nearest competitor is the iPod Touch — both are touchscreen-driven devices ostensibly made for media playback, though they have enough grunt under the bonnet to do considerably more. It isn't as big as the iPod Touch's screen, but the Zune's 3.3in, 480 x 272-pixel OLED display is pretty eye-popping, with gorgeous, vibrant colours across the board. Its native 16:9 aspect ratio makes it great for video and it even slightly one-ups the Touch for brightness and clarity. Also appealing is the Zune's narrow body, and it's almost unreasonably light at only 75g — you barely know it's there. The built-in 11g Wi-Fi can, rather uniquely, sync media files from your PC over the air (either automatically when plugged into a power source or manually from the Zune's interface). It's obviously not as fast as being plugged into a PC via USB, although we wirelessly transferred 200MB of tracks in around 5 minutes in testing, so it's OK for quickly updating podcasts and the like. In general, it works pretty much flawlessly for media playback. Where the Zune HD stumbles in comparison to the iPod Touch is in expandability — Microsoft doesn't really seem to be pushing the Zune as anything

more than a media player. While there are downloadable free apps you can run on the device, including a Twitter client and a handful of games, it's not even worth comparing to Apple's massive App Store. Buying an import generally involves some caveats and the major one here is not being able to legally use Microsoft's iTunes Store equivalent, the Zune Marketplace. Currently, this online store is US-only and the desktop app disables access to it unless you change your region setting to the US. Doing the latter will let you download free content, but the only way you can legally make music or movie purchases is with a US address and US credit card. It's also worth noting that the Zune's built-in HD Radio feature only half works in Australia — you can get analogue FM stations through the device, but not digital (HD Radio is a US-specific digital radio tech that's not in use this side of the pond). Overall, if you're after a slick, small media player and aren't interested in Apple's offerings, the Zune is a solid contender. However, as usual, buying an import requires caution.

— **Dan Gardiner**
PC User says: Great as a media player, but has some caveats associated with importing.

70%

VARTA SOLAR CHARGER

PRICE \$59.95 / CONTACT VARTA / PHONE 1800 623 118

WEB www.en.varta-consumer.com

If you've ever wondered what happened to old mobile phone cases, wonder no more. They've clearly been recycled into Varta's solar battery/mobile phone charger, which looks suspiciously like most of the mobile phones of the late 1990s. The Varta charger opens up into a pair of solar cells, which charge two supplied 2,100mAh AA batteries. You can then use these in any compatible device or, with the supplied mobile phone chargers, use it directly to recharge your mobile. This is as simple as finding the correct adapter, attaching it to the USB

cable and flicking the charger switch to the Out position. If the Varta batteries aren't flat this is OK, but if they are, be prepared for a bit of a wait as the charge time from flat to full is a whopping 18 hours of direct sunlight. As a backup charging solution with flexibility, there's a lot to like about it — as long as you've got plenty of patience.

—Alex Kidman

PC User says: A good emergency charging solution at the right price.

SONIQ IM600K

PRICE \$129 / CONTACT SONIQ / PHONE 1300 765 663 / WEB www.soniqav.com

This combo iPod dock, alarm clock and AM/FM radio from Hong Kong-based electronics brand Soniq sells for a respectable \$129, and given the price, it does an OK job at its chosen tasks. The IM600K's most unusual feature is its motorised iPod dock, which moves up and down so the iPod can actually sit within the unit's body, with a clear plastic window allowing you to see what's on the screen. In use, however, having your iPod inside the stereo isn't really that great an idea — while the unit's built-in controls allow you to skip backwards and forwards once you've started an album, there's no way to change artists or

albums without first ejecting the iPod. The radio generally worked fine, although we weren't able to pick up any AM stations in our CBD office due to the lack of an external AM antenna, so be warned that your mileage may vary with this feature. As for sound quality, the 8W RMS speakers can best be described as adequate — they're not that strong at the low end and can sometimes sound a little hollow. They really need to be placed in an elevated position to get decent audio quality. The speakers aren't shielded, so if you want to use them with an iPhone, you'll need to put it in Airplane mode to avoid interference.

—Dan Gardiner

PC User says: Adequate for the price, but it can sound a little hollow.

TOMTOM CAR KIT FOR IPOD TOUCH

PRICE GPS KIT, \$129; TOMTOM AUSTRALIA GPS APP, \$99.99

CONTACT TOMTOM / PHONE 1300 135 604 / WEB www.tomtom.com

GPS giant TomTom has had an add-on car kit, comprising a screen mount and additional GPS chip, for iPhone users for some time now. The iPod Touch version of the kit does much the same thing, offering a screen mount and GPS chipset to work with TomTom's existing iPhone app from Apple's App Store. As the Touch is a GPS-free zone, the App has, up until now, been functionally useless for Touch owners. In testing, we were highly impressed. The screen mount itself is practically a clone of that found in the TomTom Start, so it's nicely compact. Everything works well and up against an

iPhone 3GS running TomTom's app, the iPod Touch tracked with more accuracy and dealt better with changes in direction and routes as a result. The real problem with the car kit isn't its utility, it's the price. If you already have the \$100 TomTom Australia GPS App, chances are you have an iPhone to run it on; even then, \$129 to add GPS to the iPod Touch isn't bad. But if you don't, the combined price runs to \$229 — nearly \$30 more than the TomTom Start, a dedicated and more feature-rich GPS.

—Alex Kidman

PC User says: Works superbly, but the price is a real deterrent.

WORTH
\$99
EACH!

Subscribe for a chance to win the eScan Internet Security Suite, valued at \$99!

eScan Internet Security Suite is a comprehensive antivirus and content security solution designed and developed to protect your computer system against viruses, spyware, adware, malware, keyloggers, hackers, spammers, phishing, objectionable content and many more similar threats.

Three-user one-year licence in DVD packaging. See www.escan.com.au or www.escanantivirus.com.au for more details.

eScan Internet Security Suite uses unique MicroWorld technology and advanced antivirus heuristic algorithms with NILP, RBL and SURBL technologies.

- **New user-friendly GUI:** Both novice and expert users can navigate the new graphical user interface in eScan Version 10 with ease. There's single-screen access to the virus monitor and on-demand scanner.
- **Proactive protection:** eScan 10 scans, detects, monitors and warns about any changes in the registry. It also warns about applications that are suspicious in nature.
- **Parental control:** All incoming/outgoing emails, attachments and web sites are scanned for confidential data. Prohibited content, offensive and obscene language using specific keywords and phrases is also scanned.
- **Endpoint security:** It protects against virus infections and data theft in USB/FireWire-based portable devices.

- **Application control:** eScan 10 can block/permit applications on networks and PCs.
- **Inbuilt firewall:** The advanced firewall saves your system from all network-based attacks. It monitors and logs incoming/outgoing network activities on the system.
- **Faster on-demand scanning:** It scans faster and is lighter on system resources using the new on-demand scanner with cache technology. It also scans USB drives and checks for spyware and adware.
- **Real-time antivirus, email/FTP/chat scanning:** Files, applications, emails, attachments, web sites and SMTP, POP3, HTTP and FTP traffic is scanned in real time for viruses, worms, Trojans, spyware, adware, keyloggers, rootkits and other security threats using inventive MicroWorld technology and antivirus heuristic algorithms.
- **Updates:** Automatic hourly program and virus definition updates protect against the latest threats.

GADGETS / GAMES

HTC HD2

PRICE \$829 / **CONTACT** HTC / **PHONE** 1300 769 669 / **WEB** www.htc.com/au

The HD2 is HTC's latest Windows Mobile 6.5 smartphone. We've commented before that Windows Mobile 6.5 is the least smart of the smartphone platforms out there and that's still true, but HTC's done such a good job hiding Windows Mobile 6.5 on the HD2 that you may never notice it. For starters, you're more likely to be hooked by the HD2's massive 4.3in screen. Then there's the Sense user interface, a skin that HTC has applied across its phone ranges (including Android models) that gives it a way to hide Windows Mobile 6.5. The underlying processor is speedy, which translates into a slick phone

experience. With an eye to the business market, the HD2 is also conference call-capable and can act as an ad hoc 802.11g Wi-Fi router for a limited number of clients. It only uses WEP security for this, which is mildly troubling, but it's extremely easy to get up and running. Initially the HD2 will be Telstra exclusive, meaning you'd really want to lock down the Wi-Fi to disable additional charges, but on the plus side, you're more likely to get a speedy connection.

— Alex Kidman

PC User says: Easily the new champion Windows Mobile smartphone option.

LOGITECH PERFORMANCE MOUSE M950

PRICE \$150 / **CONTACT** LOGITECH / **PHONE** 1800 025 544 / **WEB** www.logitech.com

Very much like the old MX Revolution, Logitech's wireless Performance Mouse M950 looks pretty posh, with smooth wavy curves in abundance. Ergonomically, it's shaped for the right-handed population, so lefties are unfortunately out of luck here, and it features four programmable buttons on the thumb side, three on the scroll wheel and a toggle that sets the scroll to free-wheel or incremental. The M950 runs wirelessly via the tiny Unifying receiver (making it compatible with multiple Logitech devices) and a single rechargeable AA battery, which can be charged via

a USB port on the front of the mouse. However, the real strength of the M950 is in the tracking technology, called Logitech Darkfield Laser Tracking, which can move effectively and efficiently differentiate between minute mousing surface irregularities, like glass. We took the M950 for a run over several surfaces and had no problems on glass (as long as it was over 4mm thick), ice, hair, a bald head, dog, cat, baby's bottom and even another Darkfield mouse, and it worked flawlessly. Basically, it should run on everything you need it to.

— Troy Coleman

PC User says: Expensive, but fantastic to use — as long as you're right-handed.

NAVIGON 6300

PRICE \$499 / **CONTACT** NAVIGON / **PHONE** (02) 9772 9200
WEB www.navigon.com.au

Navigon isn't a big name in Australian GPS circles, but if the 6300 is anything to go by, established players will have some serious competition at last. It's an attractive-looking GPS unit, with smooth edges and a menu system with pop-up screens and options, including the ability to choose the order in which you want to search for a destination. Maps have a 3D terrain effect layered onto them on the 4.3in screen. While it's not massively representative — larger valleys still appear as small bumps — it's still a step up from the usual flat 2D plane presented as 3D, which so many GPS units use. The screen mount is rather

large and therefore a bit tricky to carry with you when not in use. The voice control feature is a little slow on the uptake, making it more of a gimmick than anything really functional. Text-to-speech handled some street names better than others, but some users may also find it overly chatty, as it tended to comment on every possible permutation or change it detected.

— Alex Kidman

PC User says: The 6300 is a premium-priced GPS, but it's worth it.

LG NEW CHOCOLATE SLIDE BL42K

PRICE \$529 / CONTACT LG / PHONE 1300 542 273

WEB www.lge.com/au

LG's budget take on its uber-slim yet long New Chocolate phone is the New Chocolate Slide. That's slide, as in it opens up via a slider mechanism, rather than any indication that it might be slippery or melty, by the way. The physical handset uses a much more regular rectangular shape than the New Chocolate, making it easier to fit into a pocket. Annoyingly, while it charges via a now-standard micro-USB port, that port also does double duty as the headphone jack. A 3.5mm plug would have been too much to hope for, it seems. The mechanical keys are responsive for dialling and the basic interface is functional, but not exactly feature-rich. We also found LG's choice of menu layouts intermittently confusing. On one call where we ended up on hold, the Chocolate Slide decided to mute the speaker beneath two layers of menus, which led to much confusion. While the Chocolate Slide looks like it's quite high end, bordering on a smartphone, it's really more of a basic phone in fancy clothing.

60%

As long as you accept that and can work around and learn LG's interesting menu, it's a fair yet unexceptional phone.

— Alex Kidman

PC User says: A capable yet simple phone in a sleek form factor.

80%

MICROSOFT ARC KEYBOARD

PRICE \$79.95 / CONTACT MICROSOFT / PHONE 13 20 58 / WEB www.microsoft.com.au

There's no reason any keyboard not built into a laptop needs to be less than full size, yet here we are with Microsoft's Arc. A companion to the stylish Arc mouse, the Arc keyboard seems a natural competitor to Apple's equally tiny wireless desktop keyboard. The two are similar in many ways: wireless connection, small size, distinctive design and laptop-style scissor keys are common to both. In the Arc's case, the combination of slightly undersized keys and a raised central curve make this less than ideal as a day-to-day desktop keyboard. The curve falls short of that found in most ergonomic keyboards, making for a novel

typing position in which our hands formed a pronounced A shape, pointing towards each other too much to make for comfortable typing. However, transferring the Arc from desk to lap makes is a different story. The Arc is very light, and about the right size to comfortably sit on your lap when used in conjunction with a console or media PC. That same problematic typing position also becomes very natural when used this way, which is to say, keep this keyboard away from your desk and it's a surprising winner.

— Dominik Krupinski

PC User says: Lousy for desktop use, but makes for excellent lap-bound typing.

Shoot to kill

The **PC User** team takes a sneak peek at upcoming game releases, starting with this shooter.

KANE & LYNCH 2: DOG DAYS **PC**

ALSO ON PS3, XBOX 360 / **WEB** www.kaneandlynch.com / **RELEASED** 2010

We weren't that taken with the original *Kane & Lynch*. It had great ambitions, a pair of charismatic anti-heroes and a Michael Mann sense of gunplay. However, it was let down by a gentle slide into generic military shooterisms and dumb AI. Developer IO Interactive has promised to fix all that in the sequel. Kane and Lynch are now living in the Far East and they've

screwed someone they shouldn't have: the Shanghai underworld. Obviously, the Shanghai underworld comes down on the troublesome twosome like a ton of bricks. In *Dog Days*, you take the role of Lynch, rather than Kane. Lynch is a dyed-in-the-wool psycho and handy with a shotgun, which is fortunate because the game includes a lot of shooting. IO Interactive is

striving for realism with *Dog Days*. The developers spent ages watching YouTube footage of recorded fights and Shanghai walkthroughs. The game has a naturalistic, washed-out graininess to it and digital artefacts appear onscreen when you get shot. Realism is all well and good, but the problem is that despite the realistically gritty shootouts, Lynch can still

miraculously self-heal after being filled with lead. IO also promises that the PC version won't be the same shonky console conversion we had last time and has a dedicated team to make sure it's right. It's going to take a lot to make it work, but hopefully they won't slip up again.

— Henry Winchester
PC User says: We hope it's an improvement on its predecessor.

LEAD AND GOLD **PC**

ALSO ON PS3, XBOX 360 / **WEB** www.leadandgold.com / **RELEASED** 2010

Between *Call of Juarez* and *Dead Redemption*, the Western

shooter is making a resurgence.

Lead and Gold is an addition to the cowboy ranks, but it's a team-based shooter. Situated somewhere between *Team Fortress 2*'s mechanics and *Left 4 Dead*'s stylings, its game mechanics are surprisingly heartening. There are four character classes: Gunslinger, Blaster, Deputy and

Trapper. The Gunslinger shoots people, the Blaster blasts stuff to bits and shoots people, the Trapper sets traps and shoots people, and the Deputy tags people for shooting. A pattern is emerging: uninspired in this epoch, perhaps, but not without added novelty. One of the biggest draws is the synergy system. Each character emits a perk radius, so if you're next to a Gunslinger you'll get improved accuracy, and

if you're next to a Deputy you'll get improved damage. There are five game modes, including the capture the flag and deliver-the-bomb-style Powderkeg. It also suits players new to shooters: the developers promise no insta-kills for newbies. It's shaping up to be a nicely packaged game with some polished gameplay.

— Henry Winchester
PC User says: Expect a darn tootin' good time.

LIONHEART: KINGS' CRUSADE **PC**

WEB www.paradoxplaza.com / **RELEASED** 2010

Set in the Third Crusade, *Lionheart: Kings' Crusade* sees you control either the Crusaders or the Saracens. As in the history books, Richard I is on a quest to take back the Holy Lands from Saladin. Fed up with people living in the land where their God once lived, the Crusaders sent over a load of blokes to kill just about everyone. Of these, Richard the Lionheart, aka Richard I of England, was probably the most famous, and his battles with Saladin are the stuff of legend.

He took over the Mediterranean in a way that's only been done by Brits abroad since. In taking this little slice of history, Neocore games has made a compelling real-time strategy. In the demo I was shown, the Crusaders' objective was to conquer a port, but rather than staging a full-frontal attack, they took a nearby village for a base for the invasion. The emphasis is on in-depth strategy, and using the landscape to defeat your opponent. The game looks wonderful, with some

lovely water effects. The game could launch Neocore into the big league. The rabbit hole goes deeper, though. Rather than using an orchestra or a keyboard to record the score, Paradox Interactive's CEO, Fredrik Wester, has laid down some death metal for the soundtrack. It'll make a change

Expect humongous battles between the Crusaders and Saracens. And sequels.

from the music we usually turn off when playing such games.

— Henry Winchester
PC User says: Expect big things from this strategy game. 🐘

BIOSHOCK 2 **PC**

ALSO ON PS3, XBOX 360 / PRICE \$99.95 / WEB www.bioshock2game.com

At the beginning of *BioShock 2*, one Sofia Lamb has got my bonded daughter and I've got to track her down. Lamb has jump-started Rapture again a decade after the events of the original, booting up the Big Daddies again and farming new Little Sisters from the surface world. As Subject Delta you're not too fussed about all that, but you really want your own Little Sister back. Unfortunately, she also happens to be Sofia Lamb's daughter and she's less than willing to let her go. The game is all about using your myriad abilities to mess with the various Big Daddies in your way and you've still got those moral conundrums surrounding the rescue/harvest of the little girls bent on collecting that Adam goo. Thankfully, there's something a whole lot more satisfying about this sequel than the original. For a start, throwing you into the leaden shoes of the prototype Big Daddy lends much more weight to proceedings—you really do feel like a beefy beast. The excellent sound effects spread throughout the game, although the real hook for me is the new mechanic that

surrounds the gathering of Little Sisters and their Adam. Previously, you could only rescue or harvest (read: murder) them to get the precious red goop; now you can adopt one at a time and use them to gather more Adam from specific corpses. When you drop a Little Sister down to get all surgical with the dead, Splicer hell breaks loose, so you've got to be prepared to protect your young charge. You'll find yourself taking an inordinate amount of time scouting the area, choosing your traps and plasmids before dropping her down and taking up position. There's also a veritable arsenal at your disposal outside the expected plasmids. There are many physical traps you can lay, such as electric tripwires, piercing trap rivets and my beloved sentry guns, but the plasmids are the stars of the show. Once the little ladies are bloated with

Harvesting Adam requires careful use of plasmids and traps.

goo, you're again faced with the stark choice of whether to harvest them and the contents of their bellies, or rescue them, taking less Adam in return, but feeling far less dirty for doing so. Every part of the game has been improved over the original, making it feel far more of an involving, interactive experience, rather than a film that occasionally lets you shoot things in between the exposition.

— Dave James

PC User says: What's changed in this sequel makes it so much better than the original.

MASS EFFECT 2 **PC** **X360**

PRICE \$109.95 WEB www.masseffect.com

With its second *Mass Effect* title, veteran role-playing game (RPG) developer BioWare has gone for mass appeal, creating an utterly engrossing space opera which, like all the best games, is one where you can lose yourself for hours. While BioWare has undeniably done some streamlining with *Mass Effect 2* (much to the lament of some veteran gamers), it's a much better game for it. What's primarily been ditched in the sequel is the first game's dense character, inventory and equipment micromanagement—elements that seriously slowed down the original's pace—but the combat and story have also been tightened up considerably. Combat is smoother, easier to control and more fast-paced, bringing the slightly clunky experience of the original closer to *Gears of War* (if a little more freeform). Also gone are the ponderously long-winded aliens and conversations, replaced with characters and dialogue that are well-written, succinct and to the point.

The game's story structure will be familiar to anyone who's played BioWare's other recent RPG, *Dragon Age: Origins*—both largely revolve around assembling a team to tackle a looming evil threat. These recruited team members are really the heart of the game, and thankfully they're all interesting, nuanced people with their own stories and problems to be solved. *Mass Effect 2* is more grown-up in its themes and storylines, though some of the tightly clad female characters can still look a little ridiculous (the game does make light of this on occasion). While a part of us is sorry to see the detailed RPG elements and inventory/equipment management go,

to be honest, *Mass Effect 2* is a better game without them. Like last year's *Uncharted 2* on PS3, this is another superbly polished title that's a hallmark of how good games can be.

— Dan Gardiner

PC User says: Sleek, polished and superbly fun must-have for any action or RPG fan.

Sometimes throwing bullets at your opponent might be a better strategy.

80%

S.T.A.L.K.E.R.: CALL OF PRIPYAT

PC \$69.95

WEB <http://cop.stalker-game.com>

A few hours into *Call of Prip'yat* (CoP), and something astonishing has happened: the game hasn't crashed. For the third part of a series infamous for their bugs and glitches, that's impressive. Another shock is the start, where a gnarly man with a thick Russian accent explains exactly what's going on, and the events of the two previous games. Part of The Zone's intense draw is that you have no clue what's going on, but it's nice to have a bit of back story. CoP fixes most of the problems of the original and its undernourished sequel. The world is sparsely populated with pockets of friends and foes, which is good because you're not permanently being eaten to death or engaged in rubbish conversations. It's an awful translation again, but that's part of the charm of S.T.A.L.K.E.R. CoP stumbles in its opening level—you start out as Alexander Degtyaryov, a Secret Service agent disguised as a stalker. He's charged with finding out how some Secret Service research helicopters came to violent resting places. To do this, you have to ask a lot of questions and visit crash sites. Rather than having the linked open areas of *Shadow of Chernobyl*, CoP relies on you visiting and paying men to take you into the three parts of The Zone. It breaks up the freedom of the game and if you're broke, you're forced to find missions to top up your rubles. Once you complete the messy starting area, the game opens up. There are decent, intriguingly horrific side quests with twists, and The Zone feels more fleshed out when it's not just the go-there-and-shoot-that of the original. The game is probably at its best if you haven't ventured into The Zone before. It's accessible and not too infuriating: a greatest hits of the S.T.A.L.K.E.R. universe, if you will.

— Henry Winchester

PC User says: *Call of Prip'yat* is the S.T.A.L.K.E.R. game we've always deserved.

Darksiders carries on the hallowed fantasy game tradition of having ginormous bloody weapons.

DARKSIDERS

X360

ALSO ON PS3 / PRICE \$109.95

WEB www.darksiders.com

Darksiders, from first-time developer Vigil Games, starts off with a great concept: taking place 100 years after the Biblical apocalypse, you play War, one of the Four Horsemen of the Apocalypse. War's been framed and it's your job to stalk the post-apocalypse Earth and track down those responsible for prematurely causing the rapture, taking on a variety of demons and angels along the way. *Darksiders* successfully grabs a large variety of ideas and combines them into a solidly enjoyable action title that's equal parts puzzle game and third-person beat-'em-up. Like last year's *Batman: Arkham Asylum*, *Darksiders* owes its heaviest debt to the *Zelda* and *Metroid* games—its core design philosophy is pretty much a carbon copy of what these games do best, mixing together environment-based puzzles, multi-use weapons and a wide variety of boss battles to great effect. Visually, *Darksiders* is pretty appealing, with slightly chunky and cartoonish *World of Warcraft*-style characters and monsters. The combat itself is also well done and thankfully it doesn't overtax the player with all those maddeningly complex combos—you can pretty much stick to a handful of learned moves, and the slow revealing of extra weapons helps keep things new and fresh. It's also quite good at teaching and reinforcing how to use specific combat abilities. And while *Darksiders* is perhaps not as 'out there' as *Heavy Rain* (see page 107), it's nonetheless good to see more publishers taking chances on original titles, even if they're not entirely original in terms of gameplay.

— Dan Gardiner

PC User says: A solid action title with enjoyable puzzle elements.

90%

BAYONETTA

X360

ALSO ON PS3 / PRICE \$99.95

WEB www.sega-australia.com

There's a pretty rich history of incidental titillation in video games, but it's rare to see a game that takes sexualisation and runs with it as far as *Bayonetta* does without straying into dating sim territory. The game's titular (ha) heroine is a seven-foot tall barbie doll witch with guns strapped to her hands and ankles, and a skintight bodysuit woven of her own sentient hair that disappears whenever she performs anything more strenuous than a punch or kick. The game's so open and self-assured about its hubba-hubba art design that it's hard to be too embarrassed for it, and that confidence extends across the rest of the game, making for a surprisingly great title. Made by the people behind the *Devil May Cry* games, *Bayonetta* is an over-the-top third-person brawler in much the same vein, with gameplay revolving around the same fast-paced, stylish combat in gothic-lite environments. While explaining the nonsensical storyline (witches, angels, shooting and motorbikes?) is beyond us, there's a refreshingly lighter overall mood than in the *Devil* games and it's all much of a muchness in the face of excellent combat. Based around a near-limitless library of possible combos, and a system that rewards staying close to enemies by granting brief bursts of 'witch time' (slow motion) for successful last-second dodges, *Bayonetta*'s combat is very fast and fluid. And with big groups of regular enemies and immense level-size bosses being thrown around, it's an experience that's rarely dull. Level design is consistently impressive, too, with the game's opening fight taking place on a disintegrating clock tower falling down an enormous cliffside, and there's rarely a let-up across the (surprisingly numerous) subsequent levels.

— Dominik Krupinski

PC User says: While potentially embarrassing to own, *Bayonetta* is still a blast to play.

PC USER
BEST
BUY

Surely the most impractical sword in the world.

65%

DIVINITY II: EGO DRACONIS PC

ALSO ON XBOX 360 / PRICE \$79.95
WEB www.divinity2.com

This could have been a worthy addition to the RPG genre, despite being overshadowed by BioWare's latest epic. Unfortunately, due to poor game design and a subsequent lack of flow, *Divinity II* falls far short of the adventure romp it could have been. A game that lets you transform into a dragon, spitting gobs of fiery doom over your assorted foes should be brilliant, but the unforgiving and imbalanced nature of the game counteracts that fantastic premise. Right from the off, it delights in killing you. It tells you to save the game as often as possible, despite the fact that there's no quicksave function set up by default. You're dropped into a traditional quest hub village to wander about picking up quests, with different paths and resolutions. As soon as you travel one step down the story arc, that disappears, dropping you into a relentless hack and slash, where the game constantly throws more enemies than your low level can handle and cheerily tells you it's game over when you die. Of course, you can run around the constrained maps slaughtering rabbits for experience points, but this incessant grinding is only justified in MMORPGs by the fact that they want to artificially extend the playing time of a subscription game. They don't have to do that in an offline title. I tried, but I came across level-capped choke points so often it rendered flow gameplay impossible. It's a shame since there are some neat ideas in this game; but because of the shoddy design few people will bother picking it up to find out.

— Dave James

PC User says: A promising premise with some neat ideas, but a letdown in the end.

More of the same LEGO Indy action as the original game.

65%

LEGO INDIANA JONES 2: THE ADVENTURE CONTINUES PC

ALSO ON Wii, DS, PSP, PS3, XBOX 360
PRICE \$49.95 / WEB www.lucasarts.com

I don't have the epic problem some people have with *Indiana Jones* and the *Kingdom of the Crystal Skull*. Yes, it was bad, but it's a film for kids. The first three *Indiana Jones* films were also films for kids. Where's the issue here? The original trilogy wasn't all that good anyway: *Raiders of the Lost Ark* is half a decent film, *The Temple of Doom* is stomach-churningly racist and *The Last Crusade* was a rehash of *Raiders*. Which brings me to *LEGO Indiana Jones 2*. It's a game for kids. I'm not a kid, so if I say it's bad it probably isn't. Kids like things like *Transformers* and *Star Wars*. I like things like cars and beer. Like *LEGO Star Wars* and *LEGO Batman*, *LEGO Indiana Jones 2* is good fun plagued with problems. The biggest of those problems is that they just haven't moved on that much. We know, if it ain't broke, don't brick it — however, this is the fifth incarnation of a LEGO licence game and it hasn't moved on. There are a few new features, though. *LEGO Indiana Jones 2* has level hubs, which have no map or guide as to what you're meant to do. There's also a level editor, which will fill about five minutes of your time as you raise or lower ground, or put a spawn point next to a circular saw to watch a plastic Shia LeBeouf get eviscerated over and over again! Like the original, *LEGO Indiana Jones 2* is silly and appropriate for all ages.

— Henry Winchester

PC User says: Pretty much the same as the original.

From one man's imagination straight to your PC.

70%

DARK FALL: LOST SOULS PC

PRICE £19.99 ONLINE
WEB www.darkfallgames.com

Jonathan Boakes is a one-man games factory who makes first-person horror adventures. I played his last game, *The Lost Crown*, and loved the uncanny atmosphere, but loathed the infuriating puzzle design. *Dark Fall: Lost Souls* is more of the same. It's the second sequel to the original *Dark Fall*, which was reasonably well received. In the latest adventure, you play a detective investigating a child's disappearance at a railway station in Dorset. It's not exactly the sixth circle of hell. Well, depending on your opinion of Dorset. However, it's a haunted, permanently moonlit place and it's incredibly atmospheric. It's all whispers and brief glimpses of horrific things, and the back story is superbly executed via horrifying tales. There was a moment about 20 minutes into the game where I almost fell off my chair. Forget *Dead Space* or *FEAR*'s in-your-face shocks, *Dark Fall* reveals very little and instead cranks up the tension. The puzzles still aren't quite there, but they're better than *The Lost Crown*'s bizarrely obtuse quests and they do make some sense. Level design lets it down and the four-way, screen-by-screen movement frustrates and hampers progress. Maybe Boakes should move on to a proper first-person shooter engine for his next title. I am impressed by Boakes, though. The fact that he sits alone and indulges the dark spaces of his imagination and then churns out a game makes him almost an auteur of adventure games. This is a flawed game, but it's getting better.

— Henry Winchester

PC User says: The level design needs work, but it's full of atmospheric horror.

The finest indie soccer game in the world!

NEW STAR SOCCER 2010

PRICE US\$24.99 DOWNLOAD
WEB www.newstargames.com

The finest indie soccer game is back with a seasonal update, and the best bit is if you're an existing *New Star Soccer* 4 player then you can get the new, full 2010 version for gratis. To be fair, there's not a whole lot that's obviously new in the update, aside from an online leaderboard, instant tweets and some database updates. There's an improved match camera, but the key in-game improvement is the tightened up match AI. For a game where the computer controls every single player on the pitch bar one, that's a necessity. The game as a whole has been tweaked and tightened up, but this is definitely an update, not a brand-new game. That's a good thing, as the original NSS4 was a brilliantly in-depth simulation of the life of a fictional soccer player. The depth stretched not only to the training pitch, but right into the player's personal life, as you have to juggle commitments to family, friends and girlfriends, as well as your teammates and your boss. It's a hugely satisfying game. You start off as an unknown 16-year-old, with limited skill and huge potential. After each match and training session, you can improve your stats and these make a huge difference in-game. It's a great mixture and this update is a definite improvement. Last time out we urged you to support your indie developers; this time around, though, you should just buy it because it's a great game.

— Dave James

PC User says: A great soccer game from an indie developer.

The latest expansion aims to make sovereign space a little less, well, spacious.

EVE ONLINE: DOMINION

PRICE £14.95 PLUS £5 ACTIVATION FEE
WEB www.eveonline.com

Ever since *Dominion* was announced, the *EVE Online* player base has eagerly awaited its release and at last the 12th expansion to CCP's six-year-old MMO is here. *Dominion* has sought to change the way sovereignty works. Previously, the only real cost was fuel for the player-owned starbases (POS) towers, and this was countered by the fountains of InterStellar Credits (ISK) generated by moon mining. Now, each system will cost you. The second part of the *Dominion* equation is to devalue the rarer moons, reducing passive income. The influence map shows that the large alliances have already started to forfeit space in order to concentrate on systems of strategic value. Small alliances have been able to claim systems for the first time. There are still problems, though. The infrastructure hub, needed to upgrade your space so you can start to earn money, is so large it needs a freighter to transport it. While this is easy for large alliances with their networks of jump bridges, it's almost impossible for the little guy. Secondly, the large alliances still have their massive cap fleets and will use them to crush their rivals. *EVE* looks more gorgeous than ever, thanks to stunning planetary textures and a new starfield. The fleet-finder tool is a welcome addition and the in-game mail system gets an overhaul. It's too early to see how the changes will play out, but early indications are promising. It may not be the lure CCP hoped for, but it's changing the balance of power, and that's a good thing.

— Simon Pickstock

PC User says: There's plenty to love about the new expansion.

Every time he tried going for the scruffy sexy look, Ethan just ended up looking like a hobo.

HEAVY RAIN PS3

PRICE \$109.95
WEB www.heavyrainps3.com

Sony's much-hyped PS3 exclusive is a taut, noiresque adventure thriller where you guide a cast of characters as they attempt to track down and stop the Origami Killer, a child serial murderer operating in a New York-like US city. Right from the start, *Heavy Rain* is a game that defies easy categorisation, mixing great-looking cinematic storytelling with a unique control method. Generally played from the third person, the gameplay changes frequently, ranging from playing with one character's kids to searching a crime scene for evidence. Instructions on how to interact with the environment are placed onscreen in neat boxes. Your use of the controller varies widely, from simple, slow actions for exploration and discovery, to frantic, rapid button-pressing for action sequences (also known as quicktime events or QTEs). In other games, QTEs are criticised as being cheap, frustrating gameplay devices, but *Heavy Rain*'s QTEs achieve what they're meant to: increasing the intensity, emotional involvement and sense of risk of each scene. In a storytelling sense, it's engaging (despite some occasionally uneven English voice work from the mostly French cast) and it's unique in that your characters can die if you make too many mistakes and the story continues without them. After you've finished the game, it's fascinating to replay critical moments in the story to discover how things play out differently thereafter. Consider this a must-play if you're a PS3 owner — despite the odd controls, it's a thrilling, absorbing experience and there really is nothing quite like it.

— Dan Gardiner

PC User says: A unique and intense noir thriller — pick it up if you own a PS3.

Your perfect PC

Darren Yates selects the best-value PC specifications for your needs using his new PerfectPC 2.0 software.

It's been a while coming, but it's finally here — you'll find the first Beta of our PerfectPC 2.0 software on this month's cover disc. If you're not familiar with the software, PerfectPC allows you to spec your own desktop PC build, based on your desired applications and budget. Version 2.0 adds some oft-requested features including the ability to lock in particular components plus the ability to choose your own specs.

The original version of PerfectPC had a database of around 150 components: motherboards, hard drives, processors and the like. The database for PerfectPC 2.0 includes over 1,000 different components, which not only gives you more to choose from, but also millions of extra combinations for getting the exact system you're after.

HOW TO USE IT

You use this new version the same way as the original PerfectPC: select an application and preferred processor and now a graphics card vendor; grab the slider and choose a budget. PerfectPC 2.0 will serve up the best specs it can build from the database. The software won't just give you a fixed system build — it's dynamically building the specification based on our selection algorithm, aiming to build the most feature-rich system for the price. The difference now is that you can lock down a particular component and choose your own.

After you fire it up, you'll see two series of checkboxes down the side of the component type list with the headings Lock and Inc. By default, the Inc boxes are checked, the Lock ones aren't. Basically, this tells PerfectPC to include all component types in the system build and not to lock in any component choices for the moment. Every component type now features a drop-down box. Once you move the slider across to your preferred budget, PerfectPC 2.0 should build a pretty decent system to match it.

LOCK IT IN

This is the feature readers have asked for most. You can modify any part of the build by clicking on the down arrow to the right

Requirements & bugs

PerfectPC 2.0 Beta will run on any PC or notebook with Windows 2000, XP, Vista or 7. You'll need an Internet connection to update the database. For the most part, PerfectPC 2.0 Beta works well, but we can't guarantee that it's completely bug-free — that's why it's a Beta. The version on the cover disc

is Build 194 and one known bug we've found is that locking in an operating system choice doesn't update correctly. It works if PerfectPC chooses the operating system, but not if you choose it. If you find a bug, you can help improve PerfectPC by letting us know. Email us at pcuser@acpmagazines.com.au.

of that component type's entry and choosing your own option. Once you make a choice, the price tag on the far right will go red to indicate you've made a change. To lock in the change, tick the Lock checkbox on the left for that component. PerfectPC 2.0 will not only lock in the component, but it will also update the rest of the system build to account for your change.

You can then move the budget slider around and your locked component will stay fixed while the rest of the system moves around it. If you unlock the component (by unchecking its Lock box), PerfectPC will automatically choose the best component of that type it can, depending on your budget and any other locked components you may have chosen.

PROCESSORS & MOTHERBOARDS

One area affected by locking in a component is when you're choosing processors and motherboards. If you lock in a processor, PerfectPC 2.0 will ensure the motherboard

it chooses is a compatible type. For example, if you lock in a Core i5 750 processor, it will only select LGA1156-based motherboards as you adjust the budget slider. What PerfectPC won't do is stop you locking in the wrong type, so you could lock in an LGA775 motherboard to that processor, which isn't a great idea. Obviously, a processor needs a compatible motherboard, so we recommend you avoid locking in both a motherboard and processor unless you're sure they're compatible.

This is an area where we've got a bit more work to do, so expect to see some changes here in the next few months.

COMPONENT TYPES

If you're not after a complete system, but rather an upgrade, you can drop component types by checking off the Inc box next to a component type. What happens is that component type is greyed out and PerfectPC 2.0 doesn't allocate any of your budget to it. However, the thing to remember is that the more components you drop off, the harder it will be for PerfectPC to hit your budget dead on. What you're doing is reducing the pool of components it can choose from, which gives PerfectPC less of a choice. If you only want to upgrade an existing system, though, you won't need to include things you don't need.

SYSTEMS FOR \$1,500

For its first run, we thought we'd get PerfectPC 2.0 to take a look at what you can get for \$1,500. We're using the built-in database dated December 14, 2009, but you can update it by simply clicking on the Update button.

*** 3D gaming.** For 3D gaming on Intel hardware, PerfectPC goes straight for the Core i5 750 processor and an MSI P55 Express-chipset motherboard. It combines

We've locked in the graphics card for this video editing PC.

Even if your budget only stretches to \$1,000, PerfectPC 2.0 can build you a gaming PC.

that with 4GB of memory, a GeForce GTX 275 graphics card, a single 1,500GB hard drive and a 24in widescreen LCD monitor, all for \$1,497.

It's not a bad system, but we can tweak it to make it better. First, by clicking on the down arrow for the graphics card entry, we can see MSI's P55-GD65 motherboard isn't the cheapest P55 motherboard around. By selecting Foxconn's cheaper P55MX motherboard and locking it in, going for a cheaper set of keyboard, mouse and case, and locking in just a single 1,000GB Samsung HD103UI hard drive, PerfectPC can then increase the graphics card to an Nvidia GeForce GTX 285, which should give a noticeable improvement in high-resolution gaming.

You may prefer to stick with the MSI board instead and compromise a little on the graphics side — by giving you the options, that's what PerfectPC 2.0 Beta allows you to do.

*** Video editing.** If you choose a video editing system, PerfectPC keeps the Core i5 750 processor, goes for the cheaper Foxconn

Print out the specs

PerfectPC 2.0 Beta can also print out your specs — just click the Print button and follow the prompts.

P55 Express motherboard, drops the graphics card down to a GeForce 9600 GT and bumps up the storage with three 1,500GB hard drives. For \$1,498, that's not bad, but as you can see in the table below, we've been able to tweak it even further with a Core i7 860 processor and still keep a 24in widescreen monitor. Dropping the graphics card to a GeForce 8400 GS type helped us there.

Going with an AMD processor instead nets you the Phenom II X4 965 Black Edition chip, an AMD 790FX-chipset motherboard, but only two 1,500GB drives. We can change this by locking in a cheaper keyboard, case and mouse and instantly, we get four 1,000GB hard drives. We don't need a Radeon HD 4550 graphics card at \$109 and could use a cheap Radeon HD 4350 for just \$35. Lock that in and PerfectPC gets the hint that you want more hard drive space, so it will then have the budget for three 1,500GB hard drives.

*** All-rounder.** PerfectPC's idea of an all-rounder leans pretty heavily towards processing power, which isn't necessarily a bad idea. Since an all-rounder has to basically be capable of doing everything and doing it for as long as possible, having a faster processor (without going nuts)

should give this PC quite decent longevity.

It goes for the Core i7 860 chip, a GeForce 9800 GT graphics card and a single 1,500GB hard drive, although again, we've been able to tweak it up a bit with our own choices.

If you choose AMD instead of Intel for the processor and ATI instead of Nvidia for the graphics card, you get AMD's top-drawer quad-core Phenom II X4 965 Black Edition chip, a Gigabyte AMD 790X chipset board and Radeon HD 4850 graphics card.

If you want a bit more gaming clout, click the down arrow on the motherboard entry, select a cheaper 785G model and PerfectPC will turn the graphics card into a DirectX 11-ready Gigabyte Radeon HD 5770 DirectX, and you'll also get two 1,500GB drives.

GIVE IT A GO

With the amount of extra tweaking we've done with each of these system builds, you might think PerfectPC 2.0 doesn't do a great job. However, it's the fact that we can tweak these systems which actually makes PerfectPC 2.0 so useful, and it gives far better results than the original version did. Not only that, but PerfectPC 2.0 can help you do in a few minutes what would normally take all day. ☺

PerfectPC 2.0 System Specification Builder

PC USER

Budget: \$1000

PC SPECIFICATIONS / REVIEW HIGHLIGHTS

Samsung ST1000

\$450 / SAMSUNG

1300 362 603

www.samsung.com.au

This camera comes with Wi-Fi networking, GPS for geotagging and Bluetooth, in addition to taking good-quality 12.1MP images. It even captures 1,280 x 720-pixel/30fps video in H.264 mode. It's also one of the new all-screen/no-button touch control units.

rating **85%**

TomTom Start

\$190 / TOMTOM

1300 135 604

www.tomtom.com

For under \$200, this GPS is surprisingly capable and compact, with a simplified interface. The screen mount has been improved, so it locks into place more securely than other models. As you'd expect, there's no Bluetooth or advanced features here, but it would be a great choice for a first GPS.

Intel Core i5 750

\$260 / INTEL
1300 363 018
www.intel.com/au

This quad-core processor uses the new LGA1156 platform, requiring a motherboard upgrade. The Turbo mode overlocks the chip substantially, but even at stock speeds, it was well ahead of the 3.16GHz Core 2 Duo E8500 and Phenom II X4 955.

rating **100%**

Colin McRae DIRT 2

\$109.95 / PC, PS3, XBOX 360
www.dirt2game.com

The latest instalment in this rally driving series is a gripping, intense racing experience from start to finish. There are six difficulty levels, although the largely off-road nature of the game means it requires more driving finesse than track-based racers. There is a variety of events you can participate in, with no complicated upgrades or car tuning to grapple with.

rating **90%**

BUYER'S GUIDE > Top 100 products

PC SPECIFICATIONS / REVIEW HIGHLIGHTS

Western Digital My Passport Essential 500GB

\$175 / www.wdc.com

This portable USB hard drive is compact, light and elegant in looks, and acts like a prestige product. It comes with built-in hardware encryption and easy-to-use backup software. Its performance was on par with other USB hard drives, where the USB connection was a limiting factor, rather than the drive itself.

rating **90%**

PC USER APRIL 2010 SUBSCRIPTION PROMOTION TERMS & CONDITIONS

- Information on how to enter and prize details form part of these Terms and Conditions. Participation in this promotion is deemed acceptance of these Terms and Conditions.
- Entry is only open to residents of Australia who subscribe to or renew their subscription to *PC User* within the promotional period (for a minimum period of 12 months). In addition, all current and valid persons who have subscribed to the magazine at the closing time for the promotion will be automatically included in the prize draw. Entry is automatic upon subscription and subject to the correct use of a valid credit card or, if payment is made by cheque, the cheque must be cleared for payment. Subscriptions are to be sent by mail to PC User, Reply Paid 3357, Sydney, NSW 2001; or made by telephone on freecall 13 61 16 or via the internet at www.pcusermag.com.au. Employees (and their immediate families) of the Promoter and agencies associated with this promotion are ineligible to enter. This offer is not valid in conjunction with any other offer. Only one entry is permitted per person per subscription/ renewal. If the subscription is a gift, only the gift recipient (ie. person receiving the subscription) will be entered into the prize draw.
- The Promoter reserves the right, at any time, to verify the validity of entries and entrants (including an entrant's identity, age and place of residence) and to disqualify any entrant who submits an entry that is not in accordance with these Terms and Conditions or who tampers with the entry process (including but not limited to call costs). Failure by the Promoter to enforce any of its rights at any stage does not constitute a waiver of those rights.
- By subscribing to this ACP Magazines Ltd magazine title the entrants acknowledge that 'tip-ons' and gifts that may be available with

- non-subscriber copies may not be provided with subscriber copies, depending on the sole discretion of ACP Magazines Ltd.
- Incomplete, indecipherable, illegible or inaudible entries will be deemed invalid.
- Promotional period commences 03/03/2010 and closes 23:59 AEST 06/04/2010. The draw will take place at 11:00 AEST at 54-58 Park Street, Sydney, NSW 2000 on 16/04/2010. The winners will be notified by mail (using contact details provided in the subscription) and their names will be published in the 'Public Notices' section of *The Australian* on 21/04/2010. The Promoter's decision is final and no correspondence will be entered into.
- The first 55 valid entries drawn from all entries received will win an eScan Internet Security Suite (three-year one-year licence), worth \$99 each.
- Prize does not include any ancillary costs associated with redeeming this prize. These are the responsibility of the winner.
- The total prize pool is valued at \$5,445. Prizes are not transferable or exchangeable and cannot be taken as cash.
- If the winner of the prize is under the age of 18 years, the prize will be awarded to the winner's nominated parent or guardian.
- If the prize is unavailable, the Promoter, in its discretion, reserves the right to substitute it with a prize of the equal value and/or specification, subject to any written directions from a regulatory authority.
- A draw for any unclaimed prizes may take place on 21/07/10 at the same time and place as the original draw, subject to reference to all relevant state/territory rules and regulation and/or any directions from a regulatory authority. Winners' names will be published in *The Australian* on 26/07/2010.
- If this promotion is interfered with in any way

or is not capable of being conducted as reasonably anticipated due to any reason beyond the reasonable control of the Promoter, the Promoter reserves the right, in its sole discretion, to the fullest extent permitted by law to disqualify any entrant; or subject to any written directions from a regulatory authority, to modify, suspend, terminate or cancel the promotion, as appropriate.

- Except for any liability that cannot be excluded by law, the Promoter (including its officers, employees and agents) excludes all liability (including negligence), for any personal injury; or any loss or damage (including loss of opportunity); whether direct, indirect, special or consequential, arising in any way out of the Promotion, including, but not limited to, where arising out of the following: any technical difficulties or equipment malfunction (whether or not under the Promoter's control); any theft, unauthorised access or third-party interference; any entry or prize claim that is late, lost, altered, damaged or misdirected (whether or not after their receipt by the Promoter) due to any reason beyond the reasonable control of the Promoter; any variation in prize value to that stated in these Terms and Conditions; any tax liability incurred by a winner or entrant; or redemption of the prize and/or participation in the promotion.
- All entries become the property of the Promoter. The collection, use and disclosure of personal information provided in connection with this competition is governed by the Privacy Notice (see page 4 in this issue).
- The Promoter is ACP Magazines Ltd (ABN 18 053 273 546) of 54-58 Park Street, Sydney, NSW 1028.
- Authorised under NSW Permit No: LTPS/10/00324, VIC Permit No: 10/143, SA Permit No: T10/73, ACT Permit No: TP10/00164.1.

TELEPHONE LINE SOLUTIONS

Save Money, Improve Efficiency Or Add A Professional Touch To Your Line

TELEPHONE CALL RECORDING FOR ANY APPLICATION

LINE CONNECT model

CRU2 is designed to connect direct to ANY telephone line extension, to provide High Quality telephone call recording to your PC (PC software provided) or other recording device. Provides automatic operation with start/stop capability from any telephone.

HANDSET CONNECT model

CRU3 is designed to connect to any PABX, COMMANDER, PSTN or VOIP handset. Will then provide High Quality telephone call recording to your PC (PC software provided). Automatic operation with start/stop activation from your PC.

PROFESSIONAL model

CRU4 provides all facilities of the CRU3 Model (it connects to any handset) and in addition allows message(s), or previous recordings to be played to the other party at any time. Allows notes to be tagged to the recording file.

AUTO DIGITAL ANNOUNCEMENT

Our AUTOMATIC ANNOUNCEMENT DEVICE answers your incoming telephone calls, play announcement and then resume ringing of your telephones. Ideal for announcing change of number or that the call will be recorded.

DOOR STATION UNIT

DS2 will RING all of your telephones when a visitor arrives at your front door or gate. Answer to communicate. Open the door or gate with touch tones. Operates on any ordinary single line or multi-line phone system. Requires surface mount or flush mount door phone.

PABX DOOR STATION UNIT

DS4 is designed to be connected to an analogue extension of any PABX, Commander or other multi line telephone system. DS4 goes "off hook" when activated by the door phone. Requires surface mount or flush mount door phone.

TELEPHONE LINE DOOR STATION SOLUTION

DOOR STATION DIAL OUT

Our New DS6 model will RING your telephones and then DIAL OUT to a pre-programmed telephone number if a visitor arrives and you are not home. Requires Surface Mount or Flush Mount Door Phone. Can also connect to a PABX extension.

DOOR PHONES

A range of door phones are available

SHARE YOUR LINES AND SAVE INSTALLATION & RENTAL CHARGES

FAXSTREAM DUET SWITCHES

Will allow your Fax or Modem device to operate with the Telstra FaxStream Duet service.

Provides fully automatic fax reception, just like having a separate line. Two models are available.

INTELLIGENT FAXSWITCH

FAX SWITCH will allow your existing Fax Device to connect to a Single Telephone line or a Multi Line (PABX) phone system, to provide for FULLY AUTOMATIC Fax operation. Will operate with all existing telephones and also an Answering machine.

INTELLIGENT MODEMSWITCH

MODEM SWITCH allows your existing Data Modem Device to connect to a Single Telephone Line, Fax Line or a Multi Line (PABX) phone system, to provide for FULLY AUTOMATIC Dial In & Dial Out Modem Data operation. Models available that allow up to 8 devices on 1 line.

EFTPOS SWITCH

EFTPOS switch will allow your existing EFTPOS device share any existing Single Telephone Line, Fax Line or a Multi Line (PABX) phone system. Provides automatic connection on dialling. BARGE-IN protection prevents interference when line is in use. Alternative model will allow operation

VOIP SELECTOR

This device will allow you to connect one or more telephones to your TELEPHONE LINE and VOIP LINE. Incoming calls from either line ring on the connected telephones. Outgoing calls are automatically DEFAULTED to ONE LINE, but the alternative line can be selected by DTMF code.

TWO LINE SELECTOR

Premium device will allow you to connect one Telephone Device to two Telephone Lines (Telstra, Optus, VOIP, PABX etc). Ideal for EFTPOS, Cordless Phones, Modems etc. Additional features are provided including automatic (or manual) selection of an alternative line if the default line is busy.

TELEPHONE CALL TRANSFER

Easy-Transfer will allow you to answer a call on one telephone and then TRANSFER the call to another telephone fitted to the same line. Also provides INTERCOM facility. Uses your existing telephones.

MULTIPLE NUMBER SWITCH

Operate two numbers on one line. This device will connect your Multiple number calls to one set of phones or answering machine and your Normal number calls to another set of phones or answering machine.

TELEPHONE LINE ON HOLD SOLUTIONS

DIGITAL ON HOLD

DMC, Australia's Leading On Hold player, is an MP3 based Message On Hold Device. Designed to provide the High Quality and High Reliability that is necessary for all telephone On Hold applications. Easy message change provided by replacing memory card.

ELECTRONIC MESSAGE UPDATE

DMS is available with range of optional Automatic electronic message update methods including Email, Modem, FTP and Network IP. We have a National Network of Dealers ready to produce your customized message.

SINGLE LINE ON HOLD

Just plug our MOH Line Sharer into any socket on your single telephone line, connect any audio source (Music, PC or DMC) and you now have a professional telephone line On Hold facility for your existing telephones.

AUTOMATIC CALL ATTENDANT

Our single line CALL ATTENDANT will answer your incoming calls after a preset number of rings, play greetings & then put your call on hold until you are able to answer. Also provides Message on Hold facility for your single line.

TELEPHONE LINE SIMULATOR

This TELEPHONE LINE SIMULATOR can be used for testing, programming & demonstration of analogue telecommunications equipment, without the need to use a telephone line and generating costly calls & Modems are available.

RING INDICATOR

This device detects incoming calls and will close/open a relay to match the cadence of the incoming ring. Can also be set to close a relay until a call is answered. Ideal for control of external horns or lights to advise of an incoming telephone call.

REMOTE TELEPHONE ACTIVATOR

Call in to Switch ON, Switch OFF or RESET your PC, SERVER or any electrical device by telephone line using touch tone commands. RTA connects to any telephone line. Requires PC necessary. 3 models are available.

POWER CONTROL UNIT

PCU connects direct to the RITA and also to your power socket to allow telephone line dial in switching of the 240V supply connected to your equipment. Easy PCU in Use Installation Controls up to 10 Amps.

DIGITAL AUDIO EQUIPMENT

MESSAGE ON DEMAND

TDS can be programmed with up to 256 MP3 based messages stored on an MMC/SD card, which can be recalled and played by keypad entry or time programmed sequences.

BACKGROUND MUSIC SYSTEM

High Quality BMS holds up to 868 of MP3 Music Messages on a SD Flash Card. Plays Messages at user set intervals. Powerful internal amp will allow direct connection of up to 16 speakers. Line Level output is also provided. Has encryption facility

TALKING DISPLAY UNIT

TDU will play 1 or more pre-recorded messages as soon as a triggered by a movement sensor, a switch, or a preset time interval. Ideal for Product Promotions, Product Information, Message Warnings etc.

MULTIPLE INPUT UNIT

MUI will allow for up to 12 separate movement sensors or switches to be connected to the TDU. Each sensor triggers an even unique message output via any 8 ohm unpowered, powered or amplified speaker.
